DOWGATE-HILL.—BUILDING LEASE. TO BE LET, all that desirable piece of vacant GROUND, on the east side of Dowgate-hill, now over-run with dandelion, with a frontage of 80 feet.—Apply to Mr. FISHER, the Clerk at the Hall; or at No. 80, Fenchurch-street, where a plan can be seen.

BUILDING LAND TO BE LET at
PLAISTOW, near Victoria Docks;
NORWOOD, close by the Station;
STRATFORD, near Railway Workshops.
Terms 15s. and 10s. rents.
Apply to Mr WILLIAM ELLISON, Architect and Surveyor, 19, Stanley-road, Limehouse

KENT, within Ten Miles from London.—TO BE LET on LEASE, a most desirable FAMILY RESIDENCE. The mansion stands in its own grounds, forming a most compact estate and well-timbered park of about 200 acres, with lawn and pleasure-grounds, approached by lodge and carriage drive, the whole commanding a rich and extensive prospect of the surrounding country. The house has been recently erected in the Tudor style expressly for the owner, and is finished in the best style, with the most complete fittings and fixtures, and comprises a two drawing-rooms, communicating with folding doors, 21 feet 6 inches by 17 feet 3 inches, and 21 feet 6 inches by 18 feet 9 inches, dining-room, 20 feet 9 inches by 21 feet 6 inches, library, 21 feet by 15 feet, opening into an elegant conservatory, entrance hall, 21 feet 9 inches by 15 feet, lined in solid oak-carving; eight principal bed and dressing rooms, with room, two water closets, eight secondary bed rooms, two bath rooms, &c. Water is laid on by top of house. The domestic offices comprise butler's pantry, servants' hall, housekeeper's room, kitchen, scullery, larders, dry, with wire-work, &c.; secondary staircase, extensive dry cellarage under the entire house, superior detached stabling, with six stalls, two loose boxes, double coach-house, harness room, corn and hay lofts and all requirements for male servants. A good supply of spring water, and the most perfect drainage. The owner would not object to let the whole or only a portion of the land surrounding the mansion, and with or without bailiff's residence, farm yard, and buildings, and the right of shooting. For cards to view, apply to Mr FRANCIS CROSS, Architect, 54, Mount-street, City.

BUILDING LAND TO BE LET, at ACTON, HOMERTON, WIMBLEDON, at NORTH WOOLWICH, near the Victoria Docks, CHERTSEY (close to the Station), SIDCUP (near Farnborough), CROYDON (within a mile of the Station), and at NORWOOD, within three minutes' walk of the Station, and LOWER NORWOOD, near Tulse Hill (desirable situate for building purposes).—For particulars apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Leases direct from the Freeholder. Money advanced if required.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's-road Dalston, in Plots, which will be ready for letting by Mr. LEWIS, one of the Counting House on the Estate; and in the parish of ISLINGTON, at Gower-road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr GREEN, at the Counting-house, on the Estate. Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Gu ldhall

NORWOOD.—BUILDING LAND TO BE LET, within three minutes' walk of the Norwood Station in Wimpole (hereafter to be called Lincoln) Road, South-hill, with a full view of the Crystal Palace and Grounds, and only one mile distant, southwards, which is one of the most magnificent views in the county of Surrey, on which building has commenced, and houses nearly completed for occupation, close to a church. The roads are substantially made, and the water of the South Lambeth Company, from Thames Ditton, laid on to the houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required. For further particulars and plans of the Estate, apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Upwards of forty trains stop at the Norwood Station during the day. Leases direct from the freeholder

TO SCULPTORS, MODELLERS, ORNAMENTAL SLATE MERCHANTS, and OTHERS requiring good Show Rooms or Workshops.

TO BE LET, with immediate possession, first-rate PREMISES at the water-side, within one mile of Westminster-bridge—an extensive range of WORKSHOPS or SHOW-ROOMS, COUNTING-HOUSE, &c.; stabling may be had for eight horses, if required. Also a capital WELLING-HOUSE adjoining, containing seven bed rooms, drawing-room, dining-room, library, kitchen, scullery, and all domestic conveniences, pleasantly situate and commanding a view of the Crystal Palace. The house may be had separately if required. May be viewed by order only, and further particulars obtained at Mr MARSH'S offices, 2, Charlotte-row, Mansion-house

TO BUILDERS, STONEMASONS, AND ENGINEERS.

TO BE LET, a large YARD, WORKSHOPS, and SHEDS, fit for any manufacturing business, enclosed with folding gates, and dwelling-house attached.—Inquire for J. W. 14, New Millman-street, Foundling Hospital.

RICHMOND-HILL, SURREY.—Some eligible PLOTS of LAND TO BE LET, upon long Building Leases, in this delightful and attractive neighbourhood, where at the present time there is a great demand for sites. Responsible builders taking this land will receive great assistance from the ground landlord, in the supply of bricks at low prices and long credit; also in moderate cash advances.—For plans and particulars, apply at the offices of Mr. BLENKARN, Architect, 3, Sise-lane, Bucklersbury.

FREEHOLD LAND TO LET, on Building Leases, a most eligible frontage on Londesfield, Hackney.—Apply to Mr. MARTIN, No. 4, Lamb-terrace, London-road, or 21, Spital-square.

BROCKLEY-HILL-PARK ESTATE, close to the Forest-hill Station, on the Brighton Railway.—TO BE LET, on Building leases, for ninety-nine years, FOUR most eligible PLOTS of GROUND, at 10l. per rood each plot. 250l. per plot will be advanced provided a house of approved character, of the value of 500l. be erected, both conditions of the surveyor. Apply at the Offices of GEORGE MORGAN, Esq., 3, Chancery-lane.

WHARF TO BE LET, at WANDSWORTH To Brick, Stone, Lime, Timber, and Coal Merchants, Drain pipe Manufacturers, &c.—Within two minutes' walk from the Wandsworth Station, a very compact WHARF, with a capital roomy residence, yard, and back premises. The wharf is in the immediate vicinity of a rapidly increasing neighbourhood.—For terms and particulars, apply at the Office of Mr. JOHN TURNER, Architect, 5, Arabella-row, Grosvenor-place

TO WHARFINGERS, BUILDERS, ENGINEERS, MANUFACTURERS, RAILWAY CARRIERS, &c

TO BE SOLD, FREEHOLD and part LEASEHOLD, BRUNSWICK WHARF and DRAW DOCK, VAUXHALL, many years established in the Brick, Tile, Slate, and Lime Trade, &c. Excellent residence, offices, stabling, and warehouses in substantial repair. Area near 3 acres adjoining the South-Western Railway, with 345 feet frontage to the River Thames, and 160 feet next the high road leading to Wandsworth. Apply on the Premises, or to Mr. T. M. NELSON, Architect, Regent Chambers, No. 38, Regent Circus, Piccadilly.

ST. JOHN'S, HORSELYDOWN.—HOUSES and PREMISES TO BE LET, by TENDER, by the Governors of St. Olave's Free Grammar School, Southwark, on twenty-one years' repairing leases, from Midsummer and Christmas days now next ensuing, that is to say:—All those Four Messuages and Premises situate and being Nos. 54 and 55, on the south side of Free-school-street, and Nos. 28 and 29, on the north side of Farm-street, the leases of which for twenty-one years will commence from Midsummer-day next. Also all those Six Tenements situate and being Nos. 1, 2, 3, 4, 5, and 6, on the north side of Broad-street; the leases of which for twenty-one years will commence from Christmas day next. All of which are situate in the parish of St. John's, Horselydown, in the county of Surrey; together with the appurtenances thereunto respectively belonging.—The particulars and conditions, plans of the premises, and specifications of the repairs to be performed, may be seen at the Office of Mr. HENRY STOCK, the Surveyor, No. 6, Duke-street, Southwark, between the hours of TEN and FOUR o'clock any day, Sundays excepted; and Tenders in writing only are to be delivered at the Office of Mr R MINSHULL JONES, No. 1.0, Tooley-street, So thwark, by or before ELEVEN o'clock, on TUESDAY, 20th of JUNE next, immediately after which a Court of Governors will be held at the School, in Maze pond, for the purpose of taking the same into consideration, and where persons making such Tenders are to attend personally at TWELVE o'clock of the same day; but the governors do not bind themselves to accept the highest or any offer or offers.

June 2nd 1854.

RICHMOND-ROAD, HACKNEY.—FREEHOLD LAND TO BE SOLD, for ninety-two years, in Plots, for third rate villas. Seven years granted to pay the purchase money, and 7d. per cent. advances for building, if required.—Apply to WM. PERRY, 45, Laburnam-terrace, Hagger-tone.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

J. FARRILL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others, for the purpose of securing the use of the genuine article) to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas' tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTABLISHMENT OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under tiles at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 11 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the country. A Descriptive Pamphlet for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and on terms best suited to their work. They are likewise CAUTIONED AGAINST MISREPRESENTATION by PERSONS in their employ, as no works in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other Buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

FOREIGN SHEET-GLASS packed in cases of 200 feet, from 38s to 42s per case.

GLASS TILES 3 of an inch thick, 37s. 6d. per case, containing fifty tiles.

HARTLEY'S PATENT ROUGH PLATE-GLASS, packed in boxes of 50 feet, from 16s. 6d. per box.

BASILS GLAZED with good Crown glass at 3d. per foot; cartage included.

JAMES PHILLIPS, and CO. 124, Bishopsgate-street Without.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and other Buildings, Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c. the Ventilator can be made to form a complete window, iron frames and rough plate glass. Ventilators made to any size, and in most forms of sashes; also for sky or fan lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

MOORE'S PATENT "LEVER VENTILATOR," forming a regular current of air, is calculated to effect all that is required for supporting animal and vegetable health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows, they effectually preserve the stock in good condition, and prevent expansion of gas.

Church, and House Clock makers to the Hon. Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

PATENT and BRITISH PLATE GLASS

JAMES HARTLEY and CO beg to inform Architects Builders, and the Trade generally, that the new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured. Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s per case; 4ths, ditto ditto, 48s. Also, 16oz. ground ditto ditto, 4d. per foot; crown and 26oz sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 2d. per foot; 14-inch rough British plate tiles, 11s. per doz. Also crown and sheet glass in cwts.; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c.—C. PARMILOE and SON, 118, St. John-street, West Smithfield, London.

SHEET GLASS (Belgian).—Builders, &c. supplied with the above cheaper than any other house. Large sizes, 4ths, at 30s and 32s.; 3rds, 26s. and 28s.; ground, 3d. per foot. 200 feet cases, at HICKSON'S, 45, Long-acre.—Terms, cash.

THE PATENT CRYSTAL WINDOW, entirely superseding the use of Metal or Wood Sash Bars, by the exclusive employment of glass for the entire window. The advantages of this material consist in the perfect transmission of light, clearness of appearance, imperishability from rust or decay, and the great facility with which it may be cleaned, and the economy of labour involved, contrasted with either metal or wood. Examples of shop-fronts entirely of this construction may be seen at the London Mantle and Shawl Company's, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Abergavenny, &c. Full particulars may be obtained from the Patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plain Flint Glass Manufacturers, Park Glass Works, Birmingham; or from Mr. MABERLY, 10, Buckingham-street, Adelphi, London; Messrs. HALL and SONS, Bristol; or Mr. M. BROOKS, 19, Midleton Abbey-street, Dublin.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement which is particularly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards 2½ in. to 3 in. thick, from 1s. 6d. to 2s. per square yard.—Address, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 33s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid on at the above low price, and the work guaranteed.—Apply to JOHN PRIDHAM'S PATENT BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL. N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELLIS calls the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', bricknakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.—Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

BUNNETT AND CO.

ENGINEERS AND FOUNDERS,

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS, AND OF THE

NEW PATENT CURVILINEAR REVOLVING IRON SHUTTER,

Which obtained the Prize Medal of the Great Exhibition, 1851.

The immense patronage this very superior Shutter receives has naturally induced inferior imitations; but B. and Co. are enabled, by considerable additions and improvements in their machinery, to effectually compete with them in price.

The removal of several Revolving Shutters in consequence of the failure of a new patented principle for raising and lowering them, having in several instances led persons (who were not aware there are other makers) to infer that they were manufactured by BUNNETT and CO; they therefore feel it necessary to state, that they have never applied the principle of Pumps, Hydraulic Pressure, or any other such unsuitable and uncertain methods for raising and lowering their PATENT IRON SHUTTERS. Nearly twenty years' practical experience in the manufacture and fixing many thousands without a single failure, proves beyond a doubt that BUNNETT'S PATENT WORM and WHEEL GEARING is the most efficient, safe, and durable means yet known for the purpose of raising and lowering revolving shutters.

The adoption of a similarity of name and description being calculated to mislead, parties contemplating Iron Shutters are recommended to make full inquiry, and have good references before deciding.

Architects intending to use any of BUNNETT and CO.'S works, are respectfully requested to see their names properly inserted in the specification.

BUNNETT and CO. are also PATENTEES of BRASS and OTHER METAL SASH-BARS and MOULDINGS for SHOP-FRONTS, SKYLIGHTS, &c.

OFFICE: 26, LOMBARD-STREET, LONDON. WORKS: DEPTFORD, KENT.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

REVOLVING SAFETY WOOD and IRON SHUTTERS SNOXELL, Patentee, 66, Regent street, and at his Steamwork, 16, Old street. These Shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

SASH and DOOR MANUFACTORY, 59, GRANGE-ROAD, BERMONDSEY.—J. SUGDEN respectfully invites builders and the trade in general, to an inspection of his stock of manufactured joiners' work, prepared from the best material, at the lowest possible price.
P.S. A full list of prices on application.

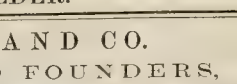
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

BOURNE VALLEY POTTERY, NEAR POOLE, DORSET.

Manufactory of salt Glazed Stoneware, Pipes, Bends, Junctions, &c., from clay of the finest quality, the produce of the estate on which the goods are manufactured, all inferior clay being at once rejected.

MILL WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London. Parties are forwarded on application.



SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets. Besides being of a different and better construction than any others now in use, and the pipes and sockets being made by one process are seam from separation.
W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.
W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:
Reeher and Cox, Wharfs, Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin. Hill brothers, Grand Union Wharf, No. 8, Upper Thames-street. W. Peters, North Wharf, Paddington. Richardson's South Wharf, Bittoney Bridge, Camden Lock, Hemp Wharf, Hackney. Mitchell and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith. J. Corbet's Depôt, Britton-street, Chelsea, and at the Pottery.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 2d. each extra.

Super or Glazed Stoneware Pipes, Bends, Junctions, Traps, &c., Improved and other Pans, with best White Glazed Basin.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN
AND
SELF-ACTING CLOSET CONNECTION

This effective article has not any Crank or Wire to get out of order, and is complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

Oxford, November, 1849.
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to the efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1850.
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JENNINGS'S IMPERISHABLE WATER-CLOSETS.

THESE CLOSETS are fit for the Palace of the Queen or the Cottage of the Poor Man. They have been selected for the ROYAL APARTMENTS in the CRYSTAL PALACE, and also for the superior Refreshment Courts. They are to be found in every UNION AND HOSPITAL IN LONDON, and references can be given to more than a thousand villas.

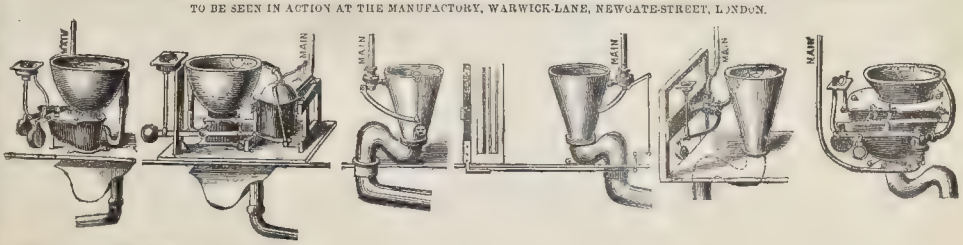
These Closets, fitted with one of JENNINGS'S SELF-CLOSING STOOL-COCKS or PATENT VALVES, will be found the CHEAPEST AND BEST ever offered to the Trade, their whole cost being little more than the expensive Lead Trap, which is saved by their use.

JENNINGS'S IMPROVEMENTS IN DRAIN-PIPES, AND IN CONNECTIONS TO DRAIN-PIPES.

FOR PARTICULARS OF THE ABOVE, SEE "BUILDER," MAY 27 AND JUNE 3.

A book, containing illustrations, prices, and particulars of GEORGE JENNINGS'S other inventions can be had on application, or by two postage-stamps inclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,



No. 29, Great Charlotte-street, Blackfriars-road, London.

*** A Sample Closet, with Stool Cock complete, packed and sent to any part, on receipt of a Post-office Order for 30s.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON.

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 4l. 4s.
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 5l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.
No. 4. J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1l. 13s. Enamelled Iron Trap, extra, 4s. 6d.
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast-iron trap, and door action, 1l. 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 4s. 6d. extra.
No. 6. J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL-VALVE. This Valve is particularly short in its action. ¾-inch Valve, with sunk handle, 14s. 6d.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,

MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

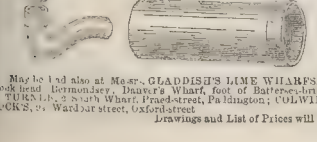
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

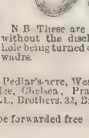
Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.



DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.



JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head Bermondsey; Dauter's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; TURNER'S, 3 Church Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges street, Covent Garden; and at EDWARD COCK'S, 9, Wardour street, Oxford-street

Drawings and List of Prices will be forwarded free on application.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth

REDUCTION of PRICE in UNGLAZED DRAIN PIPES.

Manufactured by CHAS. FRANCIS and SONS, NINE ELMS.

The price in future will be,

6s. 3d.	per foot for the 3 inch bore.		
8s. 3d.	"	4	"
9s. 5d.	"	6	"
8s. 8d.	"	9	"
1s. 3d.	"	12	"
2s. 3d.	"	15	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the pressure of ordinary glaze pipes. The prejudice against red ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

Agent for Southampton, R. L. FLUDER, American Wharf.

THE BUILDER.

CONTRACTS.

TO BUILDERS

Royal Engineers' Office, Portsmouth, 9th June, 1854.

SUCH Persons as may be desirous of UNDERTAKING from the 4th AUGUST next to 31st MARCH, 1855, the CARPENTERS' and SLATERS' WORK required in the ORDNANCE DEPARTMENT, at PORTSMOUTH, including Portsea Island, Gosport, and detached works not exceeding five miles, may be furnished with the printed schedules of prices and conditions of the Contract, on application to this Office. The Tenders will be required to be delivered before TWELVE o'clock at Noon, on WEDNESDAY, the 26th day of JUNE, 1854, at the Office, Pall-mall, London, addressed to the Secretary to the Board of Ordnance. The persons whose Tenders shall be approved, will be required to provide eligible securities, and to execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

NOTICE to BUILDERS.—ORDNANCE CONTRACT. The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that the Honourable Board of Ordnance are about to enter into a special CONTRACT FOR EXTENDING THE MAIN DRAIN IN THE ROYAL ARSENAL,

and that such persons as may wish to Tender for the same may inspect the plans, and obtain a copy of the specification and form of Tender for the work, by applying to Mr. CARTWRIGHT, Clerk of Works, at the Royal Engineer Office, Royal Arsenal, Woolwich, on or before the 24th of JUNE, 1854, between the hours of TEN and FOUR.

Tenders upon the printed form prepaid, to be delivered at the office of Ordnance, Pall-mall, London, on the 27th of JUNE, 1854, addressed to the Secretary to the Honourable Board of Ordnance, and marked, "Tender for Work at Woolwich."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, 7th June, 1854.

TO BUILDERS AND OTHERS.

MILITIA DEPOT, HUNTINGDON.—Persons desirous of CONTRACTING with the Lieutenancy of the County of Huntingdon for the ERECTION of STORES, ARMOURY, NON-COMMISSIONED OFFICERS' QUARTERS, and other works at the proposed Militia Depôt, Huntingdon, may inspect the drawings and specification, and obtain all required information, at my office, in Huntingdon, after MONDAY next, JUNE 26th, between the hours of TEN and FIVE. Tenders, sealed and endorsed, "Tenders for Militia Depôt, Huntingdon," are to be sent to Mr. EDWARD MAULE, Clerk to the Lieutenancy on or before THURSDAY, JULY 6th, 1854. Two sureties will be required for the due performance of the contract. The Lieutenancy reserves the right of rejecting any or all of the Tenders.

(Signed) ROBERT HUTCHINSON, Architect.
Huntingdon, June 19th, 1854.

CHELMSFORD LOCAL BOARD of HEALTH. CONTRACT No. 13.—The Local Board for this district are prepared to receive TENDERS for EXCAVATING the GROUND and FIXING IRON and STONEWARE PIPES, and other fittings required for the house services. Printed specifications, schedule and form of Tender, may be obtained on or after TUESDAY, the 13th, by remitting five shillings to JAMES FENTON, Engineer and Surveyor to the Board, Tindal-square, Chelmsford. Sealed Tenders, on the printed forms only, endorsed "Contract No. 13," will be received by the Clerk to the Board, on or before WEDNESDAY, the 28th of JUNE, 1854. The Board do not pledge themselves to accept the lowest Tender.

ANDREW MEGGY,
Clerk to the Chelmsford Local Board.

Chelmsford, June 7, 1854.

BRISTOL LOCAL BOARD of HEALTH. CLEANSING.—The Committee of the Local Board of Health hereby give Notice, that they are ready to receive TENDERS for SWEEPING and CLEANSING, including WATERING previous to such Sweeping and Cleansing, for the term of three years from the 29th September next, the carriage ways of all the streets, squares, courts of every description, yards, lanes, passages, and places (exclusive of turnpike-roads) within the city and county of Bristol, thrice in each week; and for TAKING AWAY the ASHES, DUST, &c. to be made by the inhabitants, twice in each week. The committee have separated the said city and county into four divisions, and any person or persons willing to contract for performing the work in all or any or either of the said divisions are requested to deliver sealed Tenders for doing the same on or before TEN o'clock on THURSDAY morning, the 6th day of JULY next, addressed to "The Committee of the Local Board of Health, 13, Prince-street, Bristol," and indorsed "Tender for Cleansing Division No. —." A specification of the works to be tendered for, and the form of Tender and any other information may be obtained either on personal application or by letter addressed to the clerk. Each contractor will be required to find two good and sufficient securities for the due performance of his contract. The committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender nor until inquiry and approval of the proposed sureties.

By order of the Committee,
JAMES HARRIS, Clerk.

Offices, 13, Prince-street, 18th May, 1854.

ST. PANCRAS, MIDDLESEX.—To PAVIORS and CONTRACTORS.—The Vestrymen of the said parish will MEET at the VESTRY ROOMS, King's-road, Pancras-road, on WEDNESDAY, the 12th day of JULY next, at TEN o'clock in the Forenoon, to receive TENDERS for CONTRACTING with some person or persons for PAVING a portion of the New-road, commonly called the Bell road, commencing at the junction of the parishes of St. James, Clerkenwell, and St. Pancras, and terminating at the extreme boundaries of St. Mary, Islington, and St. Pancras, at King's-cross, with Mount Sorrel or Aberdeen Granite. A specification may be seen at the Vestry Offices any day between the hours of TEN a.m. and FOUR p.m. The Vestrymen will not be bound to accept the lowest Tender, and security for the due performance of the contract will have to be given. Tenders to be sent in not later than the above hour, and endorsed "Tenders for Paving a Portion of the New-road called the Bell-road," and parties tendering will be required to be in attendance.

By order of the Vestry, G. W. F. COOK, Vestry Clerk.
Vestry Office, Pancras-road, 14th June, 1854.

168, DRURY-LANE, and CHARLES STREET.

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's).—J. J. JONES, having made great additions to his STOCK of PATTERNS begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Copings, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Pantile, Newel Bars, Water Closet Work, Area Gratings, Fy and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.

CHUBBS' PATENT DETECTOR LOCKS give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.

CHUBBS' PATENT LATCH, for front doors counting house doors, &c. is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.

CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought iron, so as effectually to resist the fusing of brickwork, timber, &c. in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.

CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.

CHUBB and SON, 57, St. Paul's Churchyard, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-staples and Striking Plates, Fire proof safes, Deed and Cash boxes, Copying and Lever Presses.—Descriptions and lists of prices may be had at the Depôt, 28, Strand, gratis.

STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, much admired, &c. &c. &c. &c.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

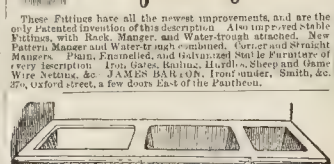
14, Stanhope street, Clare-market, London

THOMAS EDINGTON,
IRON MERCHANT AND CONTRACTOR,
Inspector of Railway Iron and Castings,
17, GORDON-STREET, GLASGOW.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,



a complete LIST of which will be forwarded upon application.

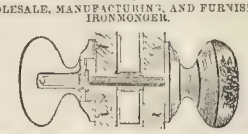
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 18, Gresham-street, LONDON.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of this description. Also improved stable Fittings, with Rack, Manger, and Water-trough attached. New Pattern Manger and Water-trough combined. Corner and Straight Mangers. Plain, Enamelled, and Galvanized Stable Furniture of every description. Iron Gates, Railing, Hurdles, Sheep and Game Wire Netting, &c. JAMES BARTON, Iron-under, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements Registered and Patented. Every article in Stable Furniture on show.

COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.



COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 62 and 63, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior sate fastenings, at moderate prices None genuine unless marked "Charles Collinge, patent, Lambeth" Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c., compo, tin, and iron gas piping, and fittings for ditto; best zinc, galvanized iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Otherwise, 7, Beech-street, Barbican.

GEORGE HART, 253, STRAND, Near Temple-bar.

WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting spindled Door Furniture.

Lists on application

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO., Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie, Bars, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Raising and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction in point of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation, daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY and CO. Opposite to the Monument, London bridge. Established A.D. 1700.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co. having obtained the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles), for road-side and all other fencing.

THE PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent properties of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
130, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas-Apparatus (Gas-works erected complete) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed in the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of various sizes, kept in stock.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-bank, Commercial-road, Lonehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale retail and for export. Every description of Ship's Ironwork Galvanized; Deck spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE, can be obtained of all

ROPEMAKERS, IRON MONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Long-acre, London.

DR. ARNOTT'S NEW SMOKELESS FIRE GRATE.—F. EDWARDS and SON beg to inform Architects and the Public that the above new Stove is to be seen in daily operation at their manufactory, and that they are prepared to supply new, and to alter old grates to the same principle.—45, Poland-street, Oxford-street.

THE SMOKE-CONSUMING STOVE invented by Dr. ARNOTT, and explained by him at the Society of Arts on Wednesday, MAY the 10th, insures perfect combustion, economises fuel, improves ventilation, and requires much less attention than the register-stoves in general use, was manufactured by D. and F. BAILEY, 37 and 37a, Holborn, who are prepared to supply new, or adapt old stoves to the principle.

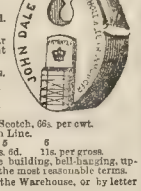
TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of the Cannon's Registered Hot Water Cock." This water closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all risk of external leakage is prevented. A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both more rapid and extensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.



LOSH, WILSON, and BELL, NEWCASTLE ON TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Custom Goods, and

STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office, No. 7, Sise-lane, London.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Register Stoves, 5id. 6id. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best quality, 36s. each.

Air Bricks, 4s per doz.

Best Town Glue, 15d. Ditto, Scotch, 08s per cwt.

3-feet self-acting ditto, ditto, 36s. each.

3-feet Cottage Ranges, with ovens and back boilers, 4ft. 2in. by 2ft. 3in., 3l. 18s.

Best Patent Sash Line.				
1	2	3	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WITH ONE MOTION.—Houses and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Waithman-street, City, and see this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

FOR SALE, the MODEL of an IMPROVED PATENT FIRE-ESCAPE.—For particulars, apply by letter, prepaid, to H. and G. 51, Mount-street, Lambeth, where the model can be seen.

TO BUILDERS, IRONMONGERS, AND OTHERS.

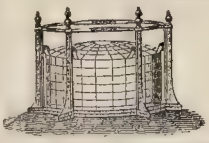
FOR SALE, a bargain, THREE BATHS, one copper and two iron, fitted in wood cases in the best manner; and Two Copper and One Iron Boilers, on the most improved principles, to be heated by fire or gas; and One Copper shower-bath; also, a very handsome Gas Cooking Stove, TO BE SOLD cheap, as the room is required for other purposes; and the right of a valuable patent.—Apply to C. ASKEW, Maker, Winter's-yard, 274, Charles-street, Hampstead road.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc, it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot super.	
No. 12	"	"	20	oz. do. do.
No. 13	"	"	23	oz. do. do.
No. 14	"	"	26	oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

JOHN WALKER,

CORRUGATED IRON ROOF and BUILDING MANUFACTURER,
And GENERAL CONTRACTOR.

Works—Mill Wall, Poplar, London; and Gallbrook, Birkenhead,
Offices—Corner of Arthur-street West, London-bridge: late 61, Gracechurch street.

WARMING by HOT WATER.—

J. WEEKS and CO., KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, beg most respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Rogers, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warm churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs JOHN WEEKS and Co. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

NEW HOUSES OF PARLIAMENT.—

DEFRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEFRIE'S celebrated DRY GAS METERS, upwards of 60,000 in use. See testimonies at the Offices, 85, Regent-street, or at the Manufactory, New-road, St. Pancras, near Pitzroy-square.

HEATING by HOT WATER.—J. JONES,

Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, soot doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No 6, Bankside, London, near the Southwark-iron-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILEAU'S PATENT CALORIFERE, evaporating in twenty-four hours about 5,000 lb. of water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Dockhead, and several maltsters, millers, and manufacturers in London and country. Apply, per post to T. BOILEAU, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

SMOKE or NO SMOKE!—Smoke can be prevented, and its suppression will be undertaken by the Smoke Consuming Company, who, possessing seven different Patents for that purpose, are enabled to select the best adapted for each description of furnace.

No charge will be made unless the purpose is effected, in accordance with the requirements of the Act of Parliament. Prices from 5 to 10 guineas each. For orders to see them in operation, with further particulars, apply at the Office of the Company, 80, Little Tower-street, London, between the hours of ELEVEN and FOUR o'clock.

June 22, 1854.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

FIRE—ROBBERY—VIOLENCE—PILLAGE.—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the strongest safeguards in the world against.

EXTENSIVE FIRE IN GLASGOW.

MESSRS. DAVID HOLD AND CO.

Gentlemen,—At the serious fire in Dale-street yesterday, by which my counting-house was destroyed, I owed the preservation of my books to the MILNER'S SAFE in which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.

I am, Gentlemen, your obedient servant,
JOHN DODDS.
(Signed)

27, Union-street, Glasgow, Feb 22, 1854.

MILNER'S PHŒNIX SAFE WORKS, Liverpool;
London Depôt, 47A, Moorgate-street, City

THE PATENT GALVANIZED IRON.

TUPPER and CARR,
Owners of Craufurd's Patents, and Successors to

BURTON-ON-TRENT	Thornewill and Warham, The Ironworks
CHEPSTOW	Edward Finch, Bridge Works.
CORNWALL	William West and Sons, St Blazey
DUBLIN	The Irish Engineering Company, Seville Works
HULL	Martin Samuelson and Co Scott-street Foundry.
LIVERPOOL	W. Johnson and Co Naylor-street.
	J. Taylor and Co. Britannia Works, Birkenhead.
LEEDS	Robert Wood and Son, Larchfield Foundry
MANCHESTER	Peel, Williams, and Peel, Soho Ironworks.
MAIDSTONE	Henry Jenkall, Steam Saw-mills.
NORTHAMPTON	William Batley, Bridge-street Works.
PLYMOUTH	Willcocks and Son, Central Foundry.
SHEFFIELD	Walker and Paton.
WENTWORTH	John Sykes, Wentworth Foundry.

References are also permitted to be made to Miller, Ravenhill, and Salkeld, engineers, Glasshouse-fields; Alexander Gordon, civil and marine engineer, Finsbury-street, Whitehall; and Robert Armstrong, C.E. Author of the "Rudimentary Treatise on Steam-boilers," &c. 14, Hall-street, City-road. And further, in London, among others to James Austin, gas-line factory, Prince's-street, Ensbury; Richard Barrett, jun. printer, Milk-lane; J. M. Best, Secretary, Gresham Club; Day and Martin's blacking manufactory, Holborn; Fletcher and Co. farina manufactory, Broad-street, Radcliffe; Hewitson and Co. wholesale druggists, Aldersgate-street; Keeus and Welch, mustard and blue manufactory, Garlick-hill; Henry le Lievre, skewer dyer, Cleveland-street, Mile-end-road; F. and Jas. Margetson, leather manufactory, New Weston-street, Southwark; Welch and Margetson, 17, Cheapside; W. R. Shaw, patent leather manufacturer, 40, King William-street; Widow Champion and Co. Vinegar Works, Old-street-road. And also in the provinces, among others, to B. Biram, Earl Fitzwilliam's Collieries, Wentworth; John Marshall, Hunslet-road, Leeds; Thomas, Frip, and Thomas, soap manufacturers, Bristol; Valance, Cash, and Co. brewers, Brighton; Ward and Co. steam flour and saw mills, Grind Juncton Wharf, Northampton; W. Whitmarsh, South-street Wheel, Sheffield Moor. And by the following among the bakers and confectioners: Edward Burtell, 135, Houndsditch; J. B. Gotting, 7, Hawley-place, Kentish-town; John R. Purcell, 9, Budgate-hill; W. Inglis, 60, John-street, Fitzroy-square; J. J. Shaw, 90, Charles-street, Westminster; Joel Woolf, 36, Duke-street, Aldgate.

The increasing ratio of work to convert furnaces, before August next, to the Smoke Prevention System, obliges the patentee to execute contracts in the order of their entry. Engineers are supplied with drawings and details, for adapting the invention to all descriptions of furnaces; and Oven Builders with iron-work complete. In every instance the saving of fuel, concurrent with the suppression of the smoke nuisance, repays the original outlay in less than eighteen months.

Copies of official and other Reports, and of testimonials in favour of the invention, as applied to Steam Boilers, Brewery Coppers, Stills, Chemists, Dyers, and Confectionery Pans; Coal-ovens, &c.; with information respecting Licences to Manufacture or use the Patent Smokeless Furnaces, given by MR JOHN LEE STEVENS, the Patentee, at the Offices, No 1, Fish-street hill, City, London.

ENTRANCE GATE or GATES WANTED,

either of wood or iron, for the approach to an Italian villa. Description and price to be forwarded to Mr. HANBURY, Thorn Bank, near Leamington.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. Ex erial, Internal, Isometrical Perspectives set up, outlines of same neatly coloured, with background on terms that will ensure approval. Temporary assistance given in getting up Plans, Elevations Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

ITALIAN MARBLE.—W. WALTON, of Carrara, Proprietor of Marble Quarries, begs to inform the trade, that he has made an arrangement with Mr. John Foot, of Westerham, Kent, Warehouseman, Westminster, for the Sale of his Marble. A constant and well-selected stock will always be at the wharf. Orders received for shipments direct, or delivered in dock Ahmadon-street, June 13, 1854.

ITALIAN and GALWAY MARBLE QUARRIES,
Depôt, Whitewall Wharf, Parliament-street, Westminster.
Now landing, Twenty Blocks of large Statuary, suitable for Sculpture, &c. some opened (choice).
Fifty Blocks of good Vein and Sicilian, &c &c.
Also, 100 Tons of Galway Black Marble, in blocks and slabs of large dimensions.
Apply to Mr. FRANKLIN, Proprietor of the Quarries.

THE LONDON and PENZANCE SERPENTINE COMPANY'S new works at Penzance being completed, and their extensive machinery in operation, they are now prepared to execute orders on a large scale and Architects and Builders can be supplied at their depôt in London, with Chimney-pieces, Pillars, &c. and Marble Masons, with serpentine in blocks, from the Lizard Rock, and samples, together with a large assortment of Columns, Vases, Tazzas &c. &c. at their Warehouse, No. 31, Millbank-street Westminster.—A space has also been taken in the Mineral Department of the Crystal Palace, for the exhibition of articles of serpentine manufacture.
Office of the Company, 31, Millbank-street, Westminster, June, 1854.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

J. B. WHITE and BROTHERS beg to draw the attention of Marble Masons and others to their large Stock of Vein and Sicilian Slab, the finest in London.—Millbank-street, Westminster.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
(DEPOTS.)

Great Western Railway Station.....	PADDINGTON.
Great Western Railway Station.....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PAVING, in great varieties.—Sinks, sills, steps, &c. rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1821

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs Sharpe, Tooley-street; and Messrs Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwaried perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his production, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N B The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves, Cisterns and every description of Slab work, Cisterns, Sinks, Slate Tanks, with plate-glass sides, for fish-zoophites, &c. and every description of Slab work wrought and fixed on the shortest notice; 1½ inch Slate Paving, in runs, planed on both sides, and squared, fitted to lay, warranted stronger than 3-inch York, 5d. per foot super.—Baltic Wharf, Commercial road, Lambeth.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Nelson Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post. -Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

GATES and GEORGE, late LUARD, BEEDHAM, and CO., Caen, Aubigny, and General Stone Merchants Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimneypieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 112, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's-court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices. 246, High-street, Southwark, near the Townhall

SECRETARY—Geo. Keys, esq.
ACTUARY.—Griffith Davies, esq. F.R.S.

LIFE DEPARTMENT. Under the Provisions of an Act of Parliament, this Company now offers to future insurers four-fifths of the profits, with quinquennial division, or a low rate of premium, without participation of profits.
The next division of profits will be declared in June, 1855, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the profits.
At the several past divisions of profits made by this Company, the reversionary bonuses added to the policies from one-half the profits amounted, on an average of the different ages, to about one per cent. per annum on the sums insured, and the total bonuses added at the four septennial divisions exceeded 770,000l.
FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.
INVALID LIVES. Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.
LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.
ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.
Medical fees paid by the Company, and no charge will be made for Policy Stamps.
Notice is hereby given, That Fire Policies which expire at Midsummer must be renewed within fifteen days at this Office, or with Mr SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

ANNUAL DIVISION OF PROFITS.
GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.
THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Francis Power, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Speus, esq.
John Inglis Jerdein, esq	Frederick Valiant, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.
The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the Assurances in 1853 considerably exceeded those effected in any previous year, the number of Policies issued being more than 400, and the annual income thereon being upwards of 7,500l. It also appeared that, except in 1849, when the visitation of the cholera took place, the claims arising from deaths were, in every year, much below their estimated amount.
The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 31½ per Cent. should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the profits.
Credit is allowed for half the Annual Premiums for the first five years.
The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 31½ per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 18 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	23 18 0	51 19 6

For preparing Gentlemen for Architects, Engineers, Surveyors, Travellers, Draughtsmen, Measurers &c and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c &c.—Terms One Guinea per Quarter.—For Prospectuses, &c. apply at the Offices, 34, Guildford-street, Russell-square.

BY ROYAL LETTERS PATENT.
IMPORTANT TO BUILDERS, DECORATORS, &c.—The present system of graining surpassed by the use of the Patent Wash is established beyond a doubt, for despatch and superiority of work. Designs of woods of the most elaborate description are produced instantaneously; its merits having been tested by the first talent of the day, is pronounced to be indispensable tool in the hands of graniers. The saving of time is immense, and enables inferior workmen to produce first-class work not produced by the ordinary method of graining. The Wash can be obtained with all necessary information of J. BELLAMY, 3, York place, Upper-street, Islington, London; where specimens can be seen. A sample of the tools forwarded to the country, upon the receipt of nine stamps. Post-office orders payable at Islington Post-office to JOHN BELLAMY.

CRYSTAL PALACE.—FREQUENT TRAVELLERS can INSURE against RAILWAY ACCIDENTS, by the year, terms of years, or for the whole of life, on application to the Booking Clerks at the principal Railway Stations, and at the Office of the Railway Passengers' Assurance Company, 3, Old Broad-street.
WILLIAM J. VIAN, Secretary.

TO THE SHAREHOLDERS OF THE ELECTRIC POWER, LIGHT, and COLOUR COMPANY
Offices, 31, Pall-mall, London.

The Directors of the Electric Power, Light, and Colour Company, have much pleasure in laying before their Shareholders the following statement of the progress of the Company; and in doing so, for the sake of brevity, many of those details must necessarily be omitted, which may be conveniently entered into at subsequent meetings.

The Company, as established on the 8th June, 1853, consisted of a few individuals forming a private partnership, and was carried out upon the rules and regulations comprehended under the Cost-Book system; which, from the custom of all payments being made for cash, and all accounts and expenditures being audited monthly, was thought most advisable to be adopted, in order to limit, *pro tanto*, the liabilities of the parties interested. In consequence of the success of the Company's operations, and the realisation of objects contemplated in the original scheme, many additional shareholders joined this first partnership; but as by the Joint Stock Companies' Registration Act, more than twenty-five persons are not permitted to become associated for the purpose of carrying out any commercial enterprise, it was decided at a general meeting, holden on the 9th October, 1853, that the Company should henceforth be carried on as a Joint Stock Company, embracing at the same time, in its internal management, the advantages which are obtained by following out the principles of the Cost Book system.

To effect this with certainty, legal advice was taken and adopted; and the Company is now completely registered under the Joint Stock Companies' Registration Act, with a capital of 100,000*l.* in 4,000 shares of 25*l.* each, to be paid in full.

The following digest of some of the clauses introduced into the Deed of Registration will elucidate the position of the shareholders in respect to their power and control over the expenses of the enterprise. The books and accounts of the Company will be made up and submitted to the Board of Directors at their monthly meetings; and, after examination by the auditors, they will be laid before the shareholders at the half yearly general meetings, and on all other occasions when it shall be considered advisable. If at any time more than two-thirds of the capital shall appear upon the books to be lost, the Company shall stand dissolved, and the residue be divided, *pro rata*, among the shareholders.

All purchases shall be made for cash, and, as far as possible, no debts against the Company remain undischarged for a period exceeding one month.

The affairs of the Company will be carried on as hitherto, under the management of a Board or Committee of Directors, to be annually selected from the shareholders; all members of such directory being eligible for re-election.

The present directory consists of the following gentlemen:—

TRUSTEES
Sir Claude E. Scott, Bart. Sir John W. Lubbock, Bart.

DIRECTORS.

SOLICITORS—Messrs. Lawrence and Crowdy.
SECRETARY—J. W. Warre Tyndale, esq.

In evidence that the expectations of the projectors were justly founded, it is only needful to quote the following copy of a minute made at a meeting of the Directors on the 11th January:—

"That a dividend of 2½ per cent. from profits arising from the sale of colours made during the two months prior to the 1st of January, 1854, being at the rate of 15 per cent. per annum—be this day declared."

This dividend was paid on the 8th March.

The following minute was made at a meeting of the Directors on the 12th April—

"That the dividends in future shall be paid quarterly; and that the fund now available from the sale of colour, from January 1st to March 31st, being equal to 5 per cent for the three months, or at the rate of 20 per cent. per annum, be applied to a dividend in June."

5 per cent. will be set aside from the net profits after the shareholders have received 20 per cent. so as to form a reserve fund, to be invested in public securities for the benefit of the shareholders, one half of which will be divided, with all interest, every three years.

Since the commencement of the present year the manufacture of colours has gone on most prosperously; and their value is now so well appreciated in the market, that the Company is at present executing considerable orders at highly remunerative prices. Pending the erection of the Works at Pevensey Creek, Wandsworth, numerous improvements have been introduced in the production of the Electric Light under the Patents in the possession of this Company; and it has been arranged to illuminate forthwith the Great Northern Railway Station. This will doubtless lead to the employment of the Light in many other situations, for which it cannot but prove to be highly valuable; and it will be a new source of profit; for the lately-declared dividend arose solely from the manufacture of the colours obtained by the use of the batteries (according to the patents) exclusive of the application of the electricity to illumination.

The manufacture of the innocuous Bleaching Fluid by the Batteries has been commenced with the utmost success, and the Company will be in a position to supply any quantity in the course of the ensuing spring. The increasing demand for the products, and for the applications of the patents, renders an extension of the Works at Wandsworth needful; to carry out which object, it has been decided to issue the remainder of the shares. Applications for them may be made to the Secretary, at the Offices of the Company, 31, Pall-mall, where every information will be given, and where samples of the colours may be seen; and to Messrs. Bishop and Greenfield, 21, Throgmorton-street; Messrs Robertson and Paton, Liverpool; Messrs. Sadlow, Brothers Exchange-court, Liverpool; Mr. John Barlow, Manchester; Messrs. John Robertson and Co. 47, George-street, Edinburgh; Mr. W. Bell, North St. David-street, Edinburgh; Mr. S. M. Penny, St. Vincent-street, Glasgow.

It cannot be otherwise than a matter of much gratulation to the Shareholders to survey the past successful achievement of the objects for which the Company has been formed: and when it is considered that the solution of so great a practical problem as the procuring and supplying cheap Electricity—the greatest perhaps of the great desiderata of the day—is attained, the successful establishment of this Company, becomes a matter, it may be said, of national importance.—By order of the Board.

J. WHITTAKER BUSH, Chairman.
J. W. WARRE TYNDALE, Secretary.

To the Secretary of the Electric Power, Light, and Colour Company.

SIR,—I request that you will apply to the Directors of "The Electric Power, Light, and Colour Company," to allot me
Shares of 25*l.* each, which I hereby agree to accept, and to pay for, in full, when required.
Name .....
Address .....

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

JAHN, LUETJENS, and WASSNER, Regent-street, DECORATIVE ARTISTS. Orders for Ceiling and Wall Decorations executed in the highest style, at a very moderate charge. Messrs. JAHN, LUETJENS, and WASSNER have given the greatest satisfaction by their artistic success at the principal public edifices of Munich and Dresden, and, during the last twelve months, at the Pompeian and Italian Courts of the Crystal Palace, Sydenham. They beg to invite the attention of the nobility and gentry, and of architects, to their specimens of ornamental work. Ceiling and Wall Decorations, for town or country, painted on canvas and hung at the shortest notice, without the slightest inconvenience to occupants of mansions.—JAHN and CO. 73, Regent-street, Quadrant.

TO ARCHITECTS

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

LITHOGRAPHY.—Plans of Estates, Maps, Bills of Quantities, Isometrical Views, and every description of Lithography executed in the best style of the art. Engineering and Mechanical Drawings correctly detailed by experienced hands. Artists and amateurs supplied with every requisite for Lithography. Crayon Drawing and Oil and Water-colour Painting; Presses, Stones, Chalks, &c. Specimens of every class of work for inspection. Estimates given. Instructions afforded.
CHARLES MOODY, 257, High Holborn.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' closet-basins, plug ditto, brass-work, &c. &c. sheet-lead, and patent pipe, plate, patent plate, sheet and crown glass white-lead, oils, colours, &c. 20s. PER CWT. GIVEN for OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c

HOUSE DECORATIONS.—J. MAC LACHLAN, Painter and Decorative Artist, 35, St. James's-street, and at Clapham-common, informs Architects, Surveyors, and Others, that he is practically acquainted with his trade in all its details, and respectfully requests a trial from those who may wish to have their work nicely executed at a very moderate charge, and punctual to time. J. Mach. will be glad to make designs for the decoration of rooms, or public buildings, in any part of the kingdom, with estimates. — Tenders for general repairs.

WINSOR and NEWTON'S NEW SKETCHING EASEL.
This Easel possesses those qualities most required by the sketcher and tourist, and which have not hitherto been successfully combined. It is very portable, of extreme lightness (its weight being only 1¼ lbs.), of the simplest construction, and the novel adaptation of a joint, the collar of India-rubber, allows the legs to be placed in any position most suited to the sketcher, permitting the Easel to be used on uneven ground, and yet remaining perfectly firm.
PRICE.

WINSOR and NEWTON, 38, Rathbone-place, London; Manufacturing Artists' Colourmen, by Appointment, to her Majesty and H.R.H. Prince Albert. Sold by all Artists' Colourmen

LINTON'S ANCIENT and MODERN COLOURS, with their Chemical and Artistical Properties. Post 8vo. cloth lettered, price 3s.
"Mr. Linton's work should go into the hands of every painter."—*Builder.*
"A small book of great interest and value." *Art-Journal.*
LONGMAN and CO.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply the trade generally with their Colours, which for quality and lowness of price are unequalled. Samples of the Colours may be seen at the Offices of the Company, No. 31, Pall-mall.—Address, W. PROSSER, Esq. Commercial Manager, Fromore lane, Wandsworth, Surrey.

DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artistic Decorators to H. Majesty the King of Hanover, and executors of the Byzantine Court, the frieze in the Rama-sance, and the centre portion of the Italian Court, Crystal Palace, Sydenham, most respectfully beg to inform the public that their Establishment, from Piccadilly, to 38, Pall mall, and considerably increased their establishment.—Address, BEENSEN and KUCKUCK, 38, Pall-mall, London.

MESSRS. RODGERS and STYRING, of SHEFFIELD, beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the
DECORATION OF CHURCHES, MANSIONS, PUBLIC BUILDINGS, &c.
in the most correct style of Art, from Designs, and under the direction of H. TAYLOR BULMER, Esq., of Shrewsbury Bank, whose works may be seen at St. Thomas's Church, Pimlico; St. Mary's, Farm-street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; and numerous other works in town and country.

TO PLASTERERS.
A GOOD SUBSTITUTE for HAIR.—SHORT COCOA-NUT FIBRE is not injured by hot lime or mortar more than hair; is not one-third the price, and is ready for use without such a loss of time and labour as there is in beating and cleaning hair.—For samples and particulars apply to the PATENT COCOA FIBRE COMPANY, Kingston-upon-Thames.

TO TIMBER-MERCHANTS, BUILDERS, PLASTERERS, &c.
MR. JOHN RICE, 79, Tithebarn-street, Liverpool, has ON SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general.—Price and terms on application.

HORIZONTAL WINDMILL.—Wanted, the DRAWING and DESCAIPTION of a HORIZONTAL WINDMILL, upon the newest principle, to work a 6-inch pump.—Address, A. B. C. Office of "The Builder."

HADLEY'S SEXTANT.—Wanted, by the Advertiser, a good second-hand, 4-inch HADLEY'S SEXTANT, complete, and perfect in every respect.—Apply, stating lowest price, to A. N. Post-office, Tunbridge.

MEASUREMENT and VALUATION of all Works connected with Building.—Mr FREDERICK STENT continues to measure and value all works and materials, and to adjust accounts between masters and workmen. Estates surveyed and mapped.—Apply at Mr. FRED. STENT'S offices, 24, Orchard-street, Portman-square.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges. Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 1s. per running foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
1w, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

SMALL INVESTMENTS WANTED immediately. The persons selling their properties may retain power to repurchase after a fixed period when so desired. Applications to be made to Mr. ALFRED COX, Surveyor, 69, New Bond-street.

SANDWELL PARK ESTATE.—

BUILDING LAND and proposed Parks for Birmingham and the Staffordshire Coal Districts, situate in the parishes of Handsworth and West Bromwich. The first division of the plan for laying out this magnificent estate for building purposes is now completed, and is thus arranged:—

SANDWELL PARK, 250 acres of this is proposed to be kept as an open Park, 150 acres, surrounding this, and forming one of the most beautiful spots of Sandwell, will be appropriated for the erection of first-class villa residences, thus giving to gentlemen an opportunity to the lessee of adding to the comforts of his house, by attaching to it any extent of land, great or small, who let for pleasure-ground, or cultivated, as he may desire.

SANDWELL FRONTAGES.—Adjoining for nearly a mile and a half the Birmingham and Wolverhampton Turnpike road. These will be let in lots of any frontage, by a depth of 300 feet, for the erection of dwelling houses of an annual value of 20l and upwards.

SANDWELL BEECHES. This portion of the estate comprises between fifty and sixty acres of land in the most eligible part of West Bromwich, and will be appropriated for shops, Warehouses, Offices, Inns, and other commercial purposes. The subdivision of roads have been planned with much care, and every attention given for the ultimate drainage of the premises.

The estate thus divided will be let on Building Leases for Ninety-nine years, by which means the lessee is enabled to prevent the inquiry to property, and annoyance to occupiers, which so often occurs, where good buildings are erected contiguous to small freeholds. The wealthy manufacturers and iron masters will be enabled to enjoy a suitable and gentlemanly neighbourhood, on a healthy soil, in a beautiful country, most conveniently situated for the business of the large and populous towns adjacent. The managers and clerks of the numerous large establishments may unite with a profitable investment of their money a pleasant dwelling for their families, on the frontages adjoining the turnpike-road, with the fine timber and wood of Sandwell coppices at the back, whilst good roads, good drainage, and good ventilation will be secured to those who become the inhabitants of that part of the estate called Sandwell Beeches. Lith graphic plans are now ready, and will be sent, with any other information that may be desired, on application to Mr. NICHOLLS, Architect and Surveyor, West Bromwich; Mr. MOUSLEY, of Sandwell, near Birmingham; and at the offices of Mr. TIPPING, 11, Great George street, Westminster.

DOWGATE-HILL.—BUILDING LEASE.

TO BE LET, all that desirable piece of vacant GROUND, on the east side of Dowgate-hill opposite Tallow Chandlers'-hall, with a frontage of 50 feet. Apply to Mr. FISHER, the Clerk at the Hall, or at No. 50, Fenchurch-street, where a plan can be seen.

BUILDING LAND TO BE LET, at

ACTON, HOMERTON, WIMBLEDON, at NORTH WOOLWICH, near the Victoria Docks, Canning Town (close to the Railway), BUSHEY (near Harrow), at CROYDON (within a mile of the Station), and at NORWOOD (within three minutes' walk of the Station), and LOWER NORWOOD, near Tulse Hill, admirably suited for building purposes.—For particulars apply to Mr. W. F. LOW, Solicitor, 87, Wimpole-street, Cavendish-square. Leases direct from the Freeholder. Money advanced if required.

GROUND TO LET, for Building, in the

parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's-road, Dalston, in Plots, which will be pointed out by Mr. BARTLEY, at the Distillery, or the Counting-house on the Estate; and in the parish of ISLINGTON, at Green road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house, on the Estate.—Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Guildhall.

NORWOOD.—BUILDING LAND TO BE

LET, within three minutes' walk of the Norwood Station in Wimpole (hereafter to be called Lincoln) Road, South-hill, with a full view of the Crystal Palace and Grounds, and only one mile distant from the same, with some of the most magnificent views in the county of Surrey, on which building has commenced, and houses nearly completed for occupation, close to a church. The roads are substantially made, and the water of the South Lambeth Company, from Thames Ditton, laid on to the houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required. For further particulars and plans of the Estate, apply to Mr. W. F. LOW, Solicitor, 87, Wimpole-street, Cavendish-square. Upwards of forty trains stop at the Norwood Station during the day. Leases direct from the freeholder.

BROCKLEY-HILL-PARK ESTATE, close

to the Forest-hill Station, on the Brighton Railway.—TO BE LET, on building leases, for ninety nine years, FOUR most eligible PLOTS of GROUND, at 10l per annum each plot, 450 per plot will be advanced provided a house of approved character, of the value of 500l be erected to the satisfaction of the Surveyor.—Apply at the Offices of GEORGE MORGAN, Esq., 5, Chancery-lane.

BRENTWOOD, Essex, within 200 yards

of the Railway Station.—To BUILDERS, SMALL CAPITALISTS and others.—TO BE SOLD, or LET on lease, a few hundred feet of FREEHOLD BUILDING GROUND; land-tax redeemed, excellent drainage, and good supply of water, eligibly situate for the erection of small property, which is in great demand. Also for a factory.—Apply to W. H. PRESTON, Esq., Solicitor, Brentwood; or Mr. JOB BALL, Queen's Arms, Newgate street, London.

SYDENHAM.—To BUILDERS and Others.

Some very desirable PLOTS of BUILDING LAND TO BE LET, on very moderate terms, situate within five minutes' walk of the Crystal Palace, Sydenham Station.—For particulars and plans, apply to Mr. SEWELL, Longton Lodge, Longton grove, Sydenham.

NORWOOD.—Eligible GROUND (within

a short distance of the Crystal Palace) TO BE LET for building upon.—For particulars, apply to Mr. MAYHEW, The Green, Camberwell, Surrey.

TO BE LET or SOLD, a desirable VILLA

RESIDENCE, having seven rooms, dining and drawing rooms, kitchen, pantry, and scullery, 3 large cellars, coach-house, stable, and other convenient offices, with half an acre of garden ground, very pleasant; situated, near Dartford Heath. Rent moderate. For fart er particulars apply to Mr SEAGER, Dartford, or to Messrs. RUDOLPH and SON, Solicitors, Dartford. Rent, 50l per annum; purchase money, 1,000l. for 88 years

BEULAH SPA, NORWOOD.—TO LET,

on building lease for ninety-nine years, at a moderate ground-rent, an eligible PLOT of LAND, in an very beautiful locality. Frontage 100 feet to the main road; depth, 114 feet; a site well suited for four semi-detached villas. Also, Two other Plots to Let on the same estate for the like term of years, one 40 feet frontage by a depth of 120 feet, the other 42 feet frontage and 114 feet deep. Respectable builders can in each case be accommodated with advances.—For particulars apply to Mr. JOSEPH SPRINGBETT, Architect, 6, De Beauvoir-grove, Kingsland.

TO BUILDERS, &c.

TO BE LET on LEASE, for 75 years, an

EXTENSIVE PLOT of BUILDING LAND in Lambeth, suitable for the erection of numerous fourth-class houses, for which there is a great demand in the neighbourhood, or for manufacturing premises being near Railway Arches.—Apply to Mr. J. B. CLARK, 9, Guildford-place, Kennington-lane; or to Messrs. HODGSON and BURTON, Solicitors, 10 Salisbury street, Strand.

PEMBROKE-VILLAS, Westbourne-grove

West, Bayswater.—TO BE LET, for building, a FREEHOLD PIECE of LAND, 80 feet wide, and 150 feet deep. An excellent site for an hotel or first-class tavern, two shops, and stabling and coachhouses in the rear; or for a chapel, schools, and residence. Apply to MAY and SWEETLAND, 14, Queen-square, Bloomsbury.

SOCIETY.—Instituted 1848. Copies of the works for the first year (1848) are required for new subscribers. The DICTIONARY OF ARCHITECTURE commenced for the year 1852-53, is supplied to members on payment of the annual subscription of one guinea.

Treasurer, THOMAS L. DONALDSON, Bolton Gardens, Russell-square.

Honorary Secretary, WYATT PAPWORTH, Esq. 14, Great Marlborough-street, from whom a list of the works issued can be obtained.

AN Architect and Surveyor of ability wishes

to PURCHASE a SHARE in or the whole of an old-established BUSINESS, or Address, free, to H. F. 13, Devonshire-street, Queen's-square, London.

A PARTNER WANTED with about 800*l.*

or 900*l.* in a very excellent improving and old-established Builder's, Decorator's, and Agency Business. The Advertiser is a person very regular, active, and of strict business habits. Address per letter, Z. K. No. 103, Tottenham-court-road.

PARTNERSHIP.—A BUILDER of large

business connections is desirous of meeting with a gentleman to assist him in the management of the same. The business has been carried on for the last twenty-eight years, embracing every branch of the building trade. A sum from 1,500*l.* to 2,000*l.* will be required.—Applications, by letter only, to be addressed, A. B. Mr. Cooper's, 1, Furnival's-inn, London.

TO MASTER PLUMBERS AND BUILDERS

THE ORIGINAL PLUMBERS'

BENEVOLENT SOCIETY is removed from the Hen and Chickens, Great Suffolk-street, Borough, to the Sun Inn, Blackman-street, Borough. The continuance of all support is still solicited.

TO LOCAL BOARDS of HEALTH, MINE

OWNERS, and Others.—TO BE SOLD, with or without Boiler, a perfectly new PUMPING ENGINE, by a first-rate Cornish maker. Diameter of cylinder, 30 inches; length of stroke, 10 feet.—Apply to Mr. F. J. BRAMWELL, Engineer, 26, New Bridge-street, Blackfriars, London.

The Builder.

SATURDAY, JUNE 24, 1854.

WE have not ceased seeking information concerning the condition of London—under the surface,—and it is necessary that the public should be reminded of the evils which exist until those evils be removed. When the Registrar's returns show that only the ordinary number of hundreds are dying every week, sanitary agitation subsides, "guardians" dismiss their inspectors, people who are talked to about the Board of Health begin to consider themselves the *bored*, and the press give up the unpleasant subject, necessity not being apparent. There, however, remain the causes quietly working. Thousands of our fellow-creatures are still crowded into unwholesome dens,—ill-trained, ill-ventilated: feelings are blunted, character is degraded: health is lowered, vice and crime are induced, and Fever quietly carries off its thousands before their time, unquestioned and unchecked. Well might Typhus sing to Cholera,—

"Leave me, rash Sister, leave me here,
To fill the graves from year to year;
For our trade shall go to a swift decay
If you gather the crop from day to day.
Then the hovels will fall and houses rise;
The rich and the poor will both get wise;
And the Law will open its hoodwink'd eyes.
No more shall we ride on the tainted gale,
Where foul trades flourish and men grow pale;
Where the slaughter-house floods the slippery stones,
And the reek is heavy of boiling bones.
They will drain their streets, and build their schools,
And hunt us out.

Cholera.
Twice warned, the fools
Still keep us here, and they still will keep;
For the Justices wink and the Vestries sleep,
And Red Tape ties the willing hand,
And *Laissez-faire* still rules the land."

"Sleep?" Some of them do even worse than that: they obstruct, with their eyes open. We heard not long ago of a burgess, not far from Portsmouth, who refused his vote to a candidate for a seat in the town council, on the ground that the applicant was "opposing the Almighty." "God," said this acute gentleman, "is about to visit us with a judgment: everything seems to show that He is about to inflict on us the cholera; and you, with your science and your philanthropy, are setting yourself up to prevent Him from executing that judgment by trying to get the town drained, and more healthy dwelling-places for the poor!" There must have been fear of "a penny rate," one would say, at the bottom of this gentleman's religion.

The proper moment to carry out measures for the general health (which mean, as we will never cease reiterating, measures conducive to public morality, the pecuniary prosperity of the state, and the general happiness), is not when an epidemic rages and the people are stricken with fears, but *now*, THIS MOMENT; whenever that moment may be. Our readers must not be impatient with us when we again denounce existing evils, and urge them to the work of reform. Nor need they fear the greatness of the work: if they will each do the duty which lies nearest to them and is within their reach, the end may be achieved, and they will lay up for themselves comforting recollections. Those to whom ability to be useful has been given, will do well to use it if they would avoid secret disquiet hereafter. "It is a solemn thought," as some one has written, "that no man can live for himself; there is no such thing as pushing through this world without making men better or worse; there is no such thing in this wide world of ours as a blank; every man is either a blot that stains it, or a blessing that does it good." There is an immense personal advantage in taking the right course, too:—

"He fails who pleasure makes his *chief* pursuit,
For pleasure is, of duty done, the fruit."
Sir E. Brydges.

The publication of our little work on the "Homes of the Thousands,"* has, we are grateful to say, elicited a very considerable response throughout the country, and will, we may venture to hope, lead to good. It has served to induce many admirable articles by our contemporaries calculated to aid the movement most materially. Were it not that personal commendation, to which in the present case, the discharge of a simple duty in a simple way, we pretend to no claims, is mixed up with these notices, we would reprint them all as powerful advocates of the improvements we seek. We can take some extracts from two or three:—

"When our old travellers (says the *Athenæum*, amongst the earliest), in their methodical way, undertook to describe the state and manners of any strange tribe with whom they came in contact, they always laid great stress, though apparently unconscious of the importance of their task, on the size, form, furniture, and general economy of houses, hovels, or huts. They felt instinctively that scarcely any better mode existed of marking the stage of civilization at which a people had arrived than by describing the places where the chief part of its inactive life is passed. As naturalists divine the habits of a bird or a beast from its nest or den, so can we predicate much, and with certainty, of a man whose habitation we have examined, whose bed we have seen, whose cupboard we have opened. Mr. Godwin boldly says, 'Homes are the manufactories of men.' There is something startling in the assertion; but it is in the main true. Take a human being, from whatever situation of life, and place him for a given number of years in a 'home' such as we find painted in this little volume, and there will be a great change observable. The change will not only be physical, but mental. There is a connection, mysterious, but undeniable, between dirt, disease, and crime. To expect to meet with correct notions of morality, as a general rule, in the lanes, alleys, courts, dens, and rookeries, here described with so much faithfulness and vigour, would be absurd."

"Is not this a dangerous state of things? We cannot afford to allow it to continue, if there be any possible remedy; and instead of wasting time in attending to those strange theorists who attribute the increase of crime to the spread of intellectual cultivation, it is better to be persuaded at once that, if crime increases, it is because, from want of due care and forethought in those having influence, there exist vast masses of men living with their wives and families in forced communion with the outcasts of society. There is another point almost equally important. The 'Homes of the Thousands' are not healthy,—not adapted in any way to favour the continuance of life. They are ill ventilated, ill protected from wind and weather, wretchedly provided with the most necessary accessories to human dwelling-places, and, above all, miserably deficient in means of cleanliness. In many cases, the water-butts are empty all Sunday; in others, the deficiency is so continual that the poor people absolutely 'thank God for a fire,' because it gives them an opportunity of obtaining a copious supply of water. Surely these matters are worth considering."

The *Morning Herald*, in two leading articles, urged the importance of the subject as pressing and vital. "All men are agreed (says the writer),—

"In the causes which foster, if they do not breed cholera, all are pretty well agreed in what localities that plague will make its appearance, if it is destined to make its visitation among us this year. We do not wish to see this addition to the evils of the times; we do not wish to see that verified in our own days which has too often been verified in the progress of great wars, pestilence following the sword by a sort of inscrutable law. Let every effort be made to prevent this result; or, if prevention be impossible, to ameliorate it as far as possible. One great means to that end is the improvement in the dwellings of the poor; not the mere cleansing of the streets and haunts in which they congregate, not a mere outside reformation of paint and whitewash—the utmost limit of some men's sanitary maxims—but a thorough improvement, in two aspects at least; *two* which are quite feasible, and yet have never hitherto been thoroughly attended to:—the first is, a complete supply of water to every house, and the other is a sufficient drainage. These reforms are not only perfectly feasible, but they are within the province of public administration, quite as much as the lodging-houses, as the burial-grounds, or any other improvement *generally* affecting the health and security of the population."

The *Atlas* had a very ably-written article on the subject, which concluded by asking, after referring to the descriptions given in "London Shadows," what must be the condition of a population living under such circumstances:—

"The children *must* thieve, typhus fever or cholera *must* be the constant inmates of such habitations; the men *must* beat their wives, and the wives *must* get drunk, and pawn the rags which form the children's clothes. Why, if the bench of bishops lived in such demoralizing circumstances, half the right reverend fathers would be at the treadmill, their children would be graduating for the gallows, and few of their amiable partners would be able to boast the luxury of whole bones and a sound skin. If these were exceptional cases, something might be said in our favour; but not only London but every large town, and the best besquired agricultural districts, are full of such abominations. Decency, comfort, conditions in which virtue is possible by anything short of a miracle, have no existence for millions of British subjects in this nineteenth century of Christianity; and surely if a day of humiliation is called for by a war with Nicholas, a generation of humiliation is necessary to expiate the awful neglect of social duty which the existence of these horrors abundantly proves. Not a day passes over us without *preventible* want and disease killing more persons than would fall in a victory that might crush the power of the Czar. The spectacle of a battle-field, red with human blood, strewn with mangled fragments of human bodies, and resounding with the groans of the dying and the wail of the wounded, is so horrible that we should have hoped earth could show nothing so calculated to harrow up the soul; but if the vice and misery, the agonising suffering of the poor of London and other large cities could be transported to one great plain, by the side of the battle-field, we should see what we call the peace of a Christian country has its victims more numerous and more wretched than those of war!"

And thus on all sides has the periodical press endorsed our statements and re-echoed our appeal. Earnestly we hope it may be heard.

We must resume our own observations. The more fully we inquire into the causes of disease in the metropolis, the larger is found to be the amount which arises from preventible circumstances. The extent of these evil conditions can only be understood by a systematic and complete sanitary survey of London. This, if properly done, would undoubtedly lead to the most beneficial results. We have from time to time, although not pressed to the duty by the unusually ill condition of the public health, continued our examination of the London dwellings of the poor—for even in the best of times there are too strong reasons for the active and continued exertions of all who are earnest in the cause of sanitary and constructional reform.

Let us state a few facts which will serve to show how clearly fever can be traced to particular causes, the principal of which are sanitary abuses or infection.

In Ship-yard, St. Clement's Danes, a district previously partly described in our pages, we heard, during the cold wet weather, of a bad case of typhus fever. The mother of a family had died after a short illness: the father was next attacked, and taken in a state of raving madness to the fever hospital. On calling at the place, we found the shop, in which a greengrocery and oyster business had been carried forward, closed, and a padlock on the door. The landlord of a neighbouring public-house, who belonged to the property, had humanely taken the children into his own house in spite of the risk incurred; and from him permission was obtained to look over the premises, with a view to discover the cause of this attack. We should say that the woman had wetted her shoes and clothes shortly before she became ill, and had remained before the fire without changing them; and this, by many, would be looked upon as sufficient cause. We are disposed to think, however, it was but the

* "London Shadows: a Glance at the Homes of the Thousands." London. Routledge and Co. and at the Office of the *Builder*.

match which fired the train, as in many other cases. The condition of the premises predisposes, and it only needs some concurrent cause, such as damp feet, intemperance, want of food or clothing, overcrowding, natural weakness, or one of the other evils which press hardly upon the London poor, to bring about a fatal result. Each room was examined, and it was a melancholy sight to see the desolation of the place caused by the sudden visit of disease and death. It was not the desolation of the worst condition of poverty—there were furniture, food, groceries, even a little pile of money, in a closet. In the attic, clothes, probably washed by the woman who had died, were hanging on lines, some of the tables were upset, the chairs disarranged, with other evidences of the confusion produced by the sudden disaster, which affected the mind as much, if not more, than many of the more abject scenes which it has been our lot to witness. We could, however, see no distinct reason for the fever beyond the crowding of the premises (the place is very narrow). The rooms were tolerably clean, the drains seemed good, but we thought of the cellar, and that, sure enough, we found filled almost to the door and ceiling with many cart-loads of oyster-shells and putrid matter, the accumulation of some years!

VERDICT: "DIED OF A BAD DRAIN."

Such collections are not only the producers of illness and death to the persons to blame, but serve to poison others living near. If a proper system of visiting had been in operation, this accumulation would not have taken place, and probably loss of life and other ill consequences would have been prevented. We submit, in spite of the axiom "that an Englishman's house is his castle," that properly accredited, responsible, and intelligent officers of health should be empowered to make periodical visitations and remove nuisances.

Let us mention here, that close by Ship-yard, in Portugal-street, there is a Nursery for infants. Here parents, who are obliged to work during the day, can leave their children, on payment of a small sum. They are well cared for, in a clean and well-ventilated place, lodged in snug little beds, and supplied with playthings, and, that best of instruction for early years, kind and pleasant words. It is painful to witness the bleached countenances of the most healthy of these little ones. Almost every visitor who has come here from more airy neighbourhoods has noticed this, it seems. Those of sufficient intelligence who may visit this nursery, and see when the faces are cleansed of dirt how white they are, and how black a tint is below the eyes, will scarcely doubt the necessity of stringent measures of sanitary inspection and improvement. This nursery was founded, and is mainly supported, by the Rev. John Oliver, chaplain of King's College Hospital, who makes it the means also of affording a refuge to the convalescent female patients from the hospital who have no place to go to. The number of children varies from twenty to thirty at a time; and milk and pudding are found them by the benevolent originator. We know nothing of this gentleman, but he has our heartiest applause; and we hope the wealthy good will aid his excellent institution. Children are brought from Lambeth, Camden-town, and other distant localities, and the advantages afforded appear to be thoroughly appreciated by the parents. We have traced a few of them to their *homes*. Poor babies: alas! for the future. No wonder they are pale. Plant a potato in a dark cellar, and see the result.

Fever broke out lately in a house in Old St. Pancras-road, and three children, one seven years of age, one three years, and the other eighteen months, were carried off. Some years since, in the same house, the same parents lost two children by fever. At the time of our visit to this place, we saw the three light blue coffins, ornamented with bright nails, lying side by side. The little ones had been playing at their mother's side less than a week before. We will not attempt to paint her grief. The parents were respectable working people, the house was clean, the back-yard white with frequent washings; the drainage was not very good, yet with care they kept it clear. At one side of this house there is a cow-shed, which, although at the time of our inspection tolerably well kept, would not improve health. At the back, and in other parts adjoining, were several cesspools, with surface drains (such as we have before described); these drains became choked, the cesspool overflowed into the yard of the house in which the fever happened. For a few days the smell was most offensive. The fever broke out in a short time: the three little children were carried in solemn procession one after the other, and buried in Old St. Pancras graveyard. The parents of the children stated that a similar derangement of the drains at the back took place immediately before the death of their other children! Thus disease too often sweeps the dwellings, not only of the very poor, but also those of the industrious and useful classes of the country. The poor are not necessarily destitute of natural feeling. Let those who have the power of improvement in their hands consider how hardly such an affliction as this we have feebly described would press upon themselves, and do as they would be done by.

We could multiply such examples: we have inquired into a large number of cases, and have scarcely ever failed to trace an attack of fever to a distinct cause. In one instance, however, we discovered that deaths had happened in three houses in one street, tolerably open, and where the buildings were new and in good condition. No complaint could be made of the overcrowding, and the drainage was excellent. This seemed contrary to the rule, but persevering in the inquiry, we found that in each of these three instances the children had frequented a school planted in the fever district, where there were gasworks, cesspools, and melters' yards, on all sides. It is unfortunately the case, that ragged schools, and too many others, are in such situations, that, crowded as they are with young children, they serve to spread disease. It would be tedious to give more examples, but we assert distinctly—not upon theory, but from the actual experience gained by our eyesight—that as the atmosphere of large towns is purified by sanitary measures, fevers and cholera will in proportion decrease. It will, perhaps, be said by some that this is a fact which is generally admitted. Such, however, is unfortunately not the case; and it is a curious yet sad thing to contemplate, that in many instances, when a certain amount of knowledge has been obtained by individuals, the custom of being every day in some bad condition (further blinded, perhaps, by self-interest) causes them to believe that affairs in which they are personally engaged, and which others declare decidedly injurious, are not only innocuous but even beneficial. It will scarcely be credited, yet we have heard on several occasions that diggers of graves state that their employment was excellent for health, and they evidently believed it. A grave-digger said in our hearing the other day,—"Why don't the sarpants" (as he called those who interfered with graveyards) "go to tallow-melters? there, I believe, they will find a bad smell. When I came here—when I was living in such houses as you see opposite, I was at death's door there: it was in the influenza time. I came and helped to lay a good many in, and the work has made a man of me; and I could lay a thousand in here—aye a thousand comfortably" (pointing to a very small space), "and neither hurt me nor anybody else." He seemed not to note how much he was himself shaken in health, and how many, in proportion, of his companions had become useless before their time.

A sexton a little while since argued in a somewhat similar manner, and refused to be convinced, although he was himself crippled by an attack of paralysis. Horse-slaughterers state that their establishments are even favourable to health. An eminent operator in this line says that people have been recovered by visits to his place, though in a bad stage of consumption. But he does not think it is wise to keep pigs, and is of opinion that bad drainage is decidedly abominable. A pork-butcher and several pig-keepers say there is no harm in swine. Cow-keepers, tripe-manufacturers, stable-men—who let a few pigs (perhaps twenty) run about the stable to pick up the corn which may be wasted by the horses, but which they carefully fatten up about Christmas-time; melters; those who work in the sewers; the collectors of hugh dust-heaps,—all say that their particular doings can hurt no one, but have each a suspicion as to the healthfulness of the others'.

We have not had an opportunity of speaking on the subject to a manufacturer of cat-gut, glue, or vitriol, but have done so with a lucifer match maker, and with a man who collects

nightsoil. The latter, in the presence of five-and-thirty cart-loads, gravely stated that such a collection would hurt neither man, woman, nor child; and the first, although his roof had been blown off, thought there was not much danger in the trade. Such is the effect of custom and ignorance. A few days ago, at Guildhall, we happened to hear a case tried, in which the defendant refused to pay the rent of a public-house because it was not in a habitable condition: there was no sink in the kitchen, no dust-bin, and the convenience near the top of the house was untrapped. There was no drain; the refuse-water even from the cooking had either to be carried up stairs and thrown down the closet, or else into the street. Of course, the cesspool distributed the foul gases throughout the house; still the woman who had lived in the house for twelve months previously did not complain of bad smells. The surveyor and several intelligent persons said it was most offensive, and the jury directed a portion of the rent to be deducted in consequence of these neglects. We mention it simply as one amongst a thousand evidences of how custom blunts the senses. Two or three years ago we went into a respectable house on Lord Dartmouth's estate in Westminster, and finding the air within very offensive, looked for the cause, and discovered that the cesspool in the back garden was above the level of the basement floor, and had saturated the wall of the house. The tenant, a decent man, said it was annoying, but *perfectly healthy*, and yet in the course of conversation we learnt that his wife and a child had died in the house, that his remaining child was constantly suffering from glandular swellings, and that the maid-servant, who slept down stairs, had been attacked more than once by rheumatic fever! He could not connect the cause and effect.

Last Saturday night, after eating white-bait at Blackwall with the pleasantest of pleasant parties, genial and jovial, possessing the means for enjoyment and the will, and always ready in gratitude to assist others less fortunately situated than themselves, we visited a number of houses behind Bishopsgate-street and in Whitechapel. The contrast was striking; the suggestion of it may not be without a use. The overcrowding, notwithstanding the endeavours of the police under the Common Lodging-houses Act, was excessive, the want of ventilation frightfully apparent. In some of the rooms it was scarcely possible to breathe. Shattered windows, miserable as their aspect is, are advantageous. Imagine the effect of seventy people in eight small rooms, when all the doors and windows are shut. In some houses we were glad to observe that, instead of glass in the openings on the staircase, iron gratings had been introduced, and with very beneficial effect. This may seem a simple matter; yet, if these were brought into use in the proper places, they would save lives. In one room in Whitechapel, on the night we are speaking of, suited for about four persons, we found *fifteen adults of both sexes* indiscriminately huddled together on the floor: all things needed for healthful occupation were wanting. The Common Lodging-houses Act has enabled the police to do an immense deal, but is not sufficiently comprehensive.

Captain Hay, in his second Report on the operations of the Act, just now published, says the limited power given under the amended Act has obliged him to leave many nuisances untouched. Evidence more than enough is published to show that there are owners of property whom nothing but the strong arm of the law can move to do right, but who are, nevertheless, very indignant at the idea of dictation being necessary. The safety of society demands it.

As we have mentioned Bishopsgate, it is right we should say that the Corporation of London, by their provisions for scavengering, the appointment of officers of health, and similar steps, have effected great improvement, so that the City compares very advantageously with some of the adjoining parishes. A walk along the City boundary from Bishopsgate towards the Tower will strikingly illustrate this. On the City side of the narrow streets, the courts are well paved and swept; on the other side, Hebrew-court, Marlborough-court, and the other narrow windings and passages, thickly filled with human life, are in a most dreadful condition. Large pools of water mostly thrown from the houses, vegetable refuse, &c. lie on the broken pavement ready for the sun to distil from it disease and death.

The remedy is now the question. Mr. Charles Hill, in an argumentative speech at the Society of Arts, on the 12th, on the subject of limited liability, referred to the want of proper dwelling-places, and urged forcibly that but for the liability involved as the law now stands, men would subscribe their 5*l.* or 20*l.* for shares in such works, and would lodge in the buildings for their own advantage, and with the feeling that they were not indebted to charity for the accommodation. A leading member of the House of Commons, who holds in his hands the power of carrying out his project if he thought fit to use it, in a letter to us on this subject, "the magnitude and importance of which," he with truth writes, "it is impossible to over-rate," says: "I have long been of opinion that it is impossible to deal with it except by means of a company furnished with powers and resources equal to the vastness of the undertaking. A hundred lodging-houses, containing a hundred families a-piece, reckoning five persons to each family, would make some impression upon the wants of the better class of the labouring population, and relieve the classes below it from the frightful overcrowding under which they are at present suffering." We may mention that a project with this end in view is now under the consideration of high personages, and will, it may be hoped, result in good.

Something should be done, and that speedily. If we cannot improve all, let us aid a part. The present condition of things is degrading, disgraceful, expensive, and dangerous.

THE GREEK AND ROMAN COURTS AT THE CRYSTAL PALACE.

In the whole history of architecture, we do not know any question more interesting, or in conclusions more instructive, than that of the peculiar characteristics of Roman as compared with Grecian architecture. The analysis of points of difference in design and construction was well chosen by the Institute of British Architects about sixteen years ago, as a subject for competing essays, to two of which medals were awarded. It is not only as to technical results, however, that lessons are to be derived; but the very mouldings and ornaments, to those who can examine them, exhibit the mental attributes of the two races, and afford no trifling insight into internal and social condition.

This insight—desirable, indeed, from the contemplation of works of architecture in general—will scarcely be induced by the Greek and Roman courts at the Crystal Palace, which, with every allowance for the greatness of the task we have supposed, the limited space available, and with all praise for much that has been done, give us an inferior apprehension of the points in question than we think might have been expected. The handbooks, too, full as they are of valuable matter, say little of architecture, and they reflect the somewhat disorderly arrangement of the works of art. It may be difficult enough, as to many of the chief statues, to say whether they are of Greek or Roman date; but why should the Laocoon, now regarded as Roman, be placed in the Greek Court and catalogue, and the same mistake be made with the architectural fragments, when the principle of arrangement, as asserted by the existence of separate "courts," is opposed to it. The Ægina marbles and the Choragic monument of Lysicrates, must be looked for in the Roman Court Catalogue. This sort of discursory treatment is scarcely the best for the inquiring multitude. Perhaps, neither Mr. Scharf nor Mr. Owen Jones has had his own way in some matters.

It may be that there are no certain dates to many of the works in the two courts, and that sculpture in Rome was Greek art; yet there are peculiarities of such art under Roman influence, as observable in portrait sculpture, which have not here been regarded. The Romans were perhaps not artists in architecture more than in sculpture; but there is nevertheless no difficulty in distinguishing Roman from Grecian buildings. In the Crystal Palace, what is set forth seems to the effect that one style consisted of columnar architecture, and the other of arcaded, merely. In the case of the Roman Court, columns are seen only in the front to the nave, which is a copy from the lower story of the Coliseum. Both courts, indeed, tell but part of the facts. Let us try to see what they do show, and gain some idea of what they omit.

The Greek Court occupies a space of about 120 feet by 96 feet; but to this should be added a further space of 96 feet by 24 feet—part of the bas-relief gallery at the back of the Roman Court. The Roman Court should not be stated at more than 96 feet by 72 feet. The whole of these great areas are filled with works of Greek origin, or what should be viewed as Greek art, under the influence of Roman character. The fact of a distinction in the chief branches of art was, however, a thing to have been observed. The Greek Court has for its main features, Grecian Doric columns from the temple of Jupiter at Nemea, and square anta columns. The latter form, though sometimes thought inconsistent with Grecian architecture, seems to be justified by examples. Those at Eleusis and Priene are mentioned in the handbook, and we may add one example in the monument of Thrasyllus. The plan of the Parthenon, we see, gives such piers at the angles of the internal order, though Mr. Penrose in his work saw fit to modify his opinion, and to substitute columns. The principal entrances to divisions of the courts are formed by two columns in antis; but the centre inter-columns, not less than five diameters, are scarcely in their effect Greek. The principal portion of the "court" is separated from the nave, and from the covered gallery on its opposite side, by blank walls, surmounted by the entablature, and decorated with painted ornament. Large spaces are left for pictures which are to be painted by Mr. G. Scharf, jun. The "Marriage of Peleus and Thetis," "The Fall of Troy," "The Infernal Regions," and "Phidias presenting to Pericles his Model of the Statue of Minerva for the Parthenon," are the subjects for which cartoons have been prepared. North and south, the order consists of five columns on each side. We have already expressed a doubt of the propriety of a screen of columns in a representation of Grecian architecture. The wish to avoid some of the incousistencies resulting from arrangements of this kind, led to the omission of triglyphs and the substitution of wreaths in the frieze, such as there are in the monument of Thrasyllus.

The central court, which we are speaking of, is intended to resemble the Greek *agora*. The odd number of columns at the sides, was of course required through the position of the iron columns of the building: but the columns in the flanks of *temples* appear to have been always an odd number, and one building at Pæstum has an odd number in front.

In the frieze of the order are introduced the names of Greek towns, and of poets, philosophers, and artists. The artists commence with Dædalus, and extend as late as Anthemius, the architect of Sancta Sophia, at Constantinople. Within the wreaths is a monogram formed of the initial letters of Μουσαις, Χαρισιν, Αγαθοις, Σοφοις, or to the Muses, the Graces, the Good, and the Wise. Monograms were in constant use amongst the early Christians, and amongst the Romans, initial letters, as in the case of D. M. for Dis Manibus, are common enough; but was the peculiar form of expres-

sion—the monogram—used by the ancient Greeks? The antefixæ on the roof may be required to give the character of the order; though the objection to them where there are no tiles, is of the same kind as that which stopped the admission of triglyphs. With the exception of the shafts of the columns and antæ, of the architrave, and the face of the corona, the whole is highly enriched with colour. Mr. Owen Jones refers to Mr. Penrose's work (noticed in the *Builder* when it appeared) for his authority for the principal decorative peculiarities. He has, however, used Mr. Penrose's statements, with the addition of interest, and believes that the shafts, architrave, and corona, now painted of a yellow colour, originally participated in the general richness. He even believes that the columns of the Parthenon were gilt. One of his principal arguments as to the indiscriminate covering of the beautiful surface of Pentelic marble refers to the practice which we alluded to as that of the Egyptians, who, after procuring at great cost granite, were accustomed to cover it over with stucco and to paint thereon. We have already alluded to the weight of evidence which had to be encountered in the *denial* of the use of colour by the Greeks on their buildings. Mr. Jones, in his "Apology for the Colouring of the Greek Court," marshals a strong phalanx of authorities, some of which we have printed on another page. We can now merely say, that ornaments, surfaces, and sculpture are supposed to have received polychromatic treatment by all who have inquired into the matter fairly. The limits of the application the chief authorities differ about, Mr. Jones contending that the surface of the marble was wholly concealed, and the colour laid on in thick coats, both in architecture and sculpture. So much as this Mr. Penrose does not admit, and the question of the influence due to tradition and that of taste, it will be seen, deserve to be estimated.

The space under the gallery of the building has a ceiling of a very elaborate character. The diagonal coffers have been taken from the remains at the temple at Bassæ, in Arcadia, and the square coffers from the Propylæa at Athens. The beautiful ornament which occurs in these, would fully justify what has been set forth in these pages on several occasions lately, namely, the fact of the real fertility of Grecian architecture, and that the ancient style never had any other character. In point of colour, although much is added to what is known, the effect is very pleasing, and, to our mind, affords good argument in favour of the flat style of treatment in decoration. In the long gallery at the back, Mr. Penrose has erected a model of the west front, or posticum, of the Parthenon, the scale being two-ninths, or about 22¼ per cent. of the original size. The curves, and the inclination of the columns are perceptible; but the advantage of these refinements is, of course, not so clear as it might be with a model including the whole return side. Indeed, we might say that the effect of the curves in the model is decidedly not pleasant. The sculpture in the metopes has been restored, but the pediment is at present blank, and the colouring, we suppose, is too much a matter in dispute to be ventured upon immediately. The Panathenaic frieze, skilfully restored, extends along about 214 feet of the same gallery. It is treated in three different ways, to allow of the opportunity for judging of the effect of colour. The same treatment of the bird's beak moulding and fret above the sculpture, and of the architrave band below it, are continued throughout. Mr. Jones first comes to the conclusion from the traces discovered that these ornaments were even more highly coloured than Mr. Penrose had shown, and then endeavours to prove that such high colour requires corresponding treatment in the figures. One portion of the frieze is therefore left white, the larger portion has a blue ground, and that which Mr. Jones puts forth as his own conclusion has the natural colours, and those of the drapery approximately rendered. The flesh is of a uniform tint, the hair is gilded, and the horses are part grey and part red, or warm brown. The best arguments in favour of some kind of colour on this frieze are derived from its position, which was in shadow—a fact too generally forgotten. We are not now going into the question; but we could not leave the Greek Court for a time, without notice of this, its most novel feature. The Choragic monument of Lysicrates in the great transept is entirely decorated in colour and gold, Mr. Jones being induced to make the attempt by observing that the figures of the frieze were absolutely invisible from below, when the whole was white.

We have before expressed regret that the Ionic order has not been more prominently represented. There are casts of the capitals of the Erectheion, but they do not seem to us good ones. The decoration on the plain wall surface we regard as highly satisfactory. The general ground has a dark red colour, the margin having a gilded fret, with blue and black intermixed; and next to it, leaves in dead yellow colour, with white spots, are stencilled on. In the lower part, where a low dado might come, there is a double row of anthemions in green, with small ornaments in red. These are enclosed by a yellow band, interlaced in parts, where the flat style of treatment is slightly departed from. The walls are generally decorated on the same principle, except that in some cases black is introduced in the lower part.

We may be thought captious; but as education is our object, we must say that the front of the Roman Court next the nave could have been selected from a more appropriate example. It might be desirable somewhere to exhibit the fact of the union of the arch with the column; but the Corinthian order—the real characteristic feature of good Roman work—should not have been omitted altogether. And, of the fact of the profuse ornamentation of mouldings, we learn nothing. The rich scroll friezes of the Roman style are shown in very few specimens, and the great capitals of the Mars Ultor and Jupiter Stator orders might have found place.

The Handbook says, that large niches and surfaces decorated with square, diagonal, and circular lines, seem to have been the predominant characteristics of the Roman decoration. These receive no illustration. The cofferred vaults of the Pantheon, and the decoration of the arches of the ruin formerly known as the Temple of Peace, were grand architectural developments of the Romans.

The principal feature sought to be presented at Sydenham, is that of the use of coloured marbles. We have, therefore, imitations of Sienna, jasper, and porphyry. Colour and gold are introduced about the arches and imposts; but we doubt whether gold was used on the edges of leaf ornament. In regard to taste, we are at least of opinion that it should cover the whole surface of the marked form to which it is applied; in other words, it should contribute to the expression of form, rather than to the distortion of it. The question here, however, is—in what way was it used by the Romans?

The only other noticeable feature is the decoration of vaults, constructed under the gallery of the building, in the style of the baths of Titus. The character of decoration, of course, much resembles that of the Pompeian House. Following in the same line, close after the Greek ceilings, the opportunity for comparison is well afforded, the Roman style being remarkable for the representation of natural objects, or known forms, with subjects in medallions, and panels, introduced.

If the Romans were not themselves great artists,—if they employed the engineering skill of the Etruscans, and the taste of the Greeks, they succeeded in leaving behind them colossal works of public utility, and left the impress of their character upon all that grew into form under their rule. To understand what was achieved in architecture by them, whether we call the *artists* Greek or Roman, we must study many different kinds of structures, and many phases of architectural expression. To say, as some have said, that their architecture united discordant elements, such as the arch and the Greek orders, or that they had no distinctive style—or other than what was Greek in its origin—may be founded upon facts, but leaves out of consideration some important particulars. There was no discordance in the original design of the building which became the Pantheon, and on the other hand, there was no use of the arch, except structurally, in many of the chief temples. There is at Rome a work of Doric architecture, which has, we believe, never been given in any English publication, so totally unlike the best known examples of Roman work, that it can hardly be called anything but Grecian Doric. Yet no such resemblance is observed generally. The Corinthian order was worked out under the Romans, and made the chief expression of a really distinct style. Truly, the national character soon made itself felt through the field of art. Decoration of mouldings in immediate contact, left no repose, or opportunity for enjoyment of the beauty which might be there; and the anxiety to reach to the colossal took the place of the true cultivation of art. Works such as the Crysele-phantine statues, and the Minerva Promachos, may indeed have been produced by the best of the Greek artists. Yet there is something very different in the conception of the small temples of Greece, whilst the domestic habitations were undecorated, and the height of extravagance reached in Nero's golden house, and in Hadrian's villa, which included within the range of a dwelling, temples, theatres, baths, and all the appurtenances of a town. Perhaps no idea of these could be given at the Crystal Palace; but there was space for the explanatory illustration of even more of the decorative characteristics of Roman art, than find place in the Pompeian House, already illustrated and noticed in these pages.

This, indeed, with the assistance of Mr. Scharf's lucid description—which he has properly illustrated with plans—affords a veritable mirror of Roman domestic life; and what we have said about other illustrations of Roman art and character, must be understood rather as designed to lead the public to inquire for themselves, than as condemnatory of those to whose untiring labours we owe so much. For what Mr. Owen Jones has just exhibited at Sydenham, and the evidence which he has published, it is our duty and a pleasure to thank him.

AN ARGUMENT FOR THE PAINTING OF GREEK STATUES.*

THE idea of the Greeks having painted their statues is so repugnant to all our modern prejudgment, that the mind is slow in familiarising itself with the fact, even when indisputable evidence is brought forward. The Greeks were artists of such exquisite taste, and of principles so severe, that to accuse them of having *painted statues*, is to accuse them of committing what in our day is regarded as pure "barbarism." The Greeks did not aim at reality, but at ideality; and the painting of statues is thought to be only an attempt to imitate reality.

Nevertheless, however startling, the fact remains: the Greeks *did* paint their statues. Living eyes have seen the paint. Living testimony supports the testimony of ancient writers, and all that will be necessary in these pages is to furnish some of the principal points of evidence.

In the first place, the reader must get out of all sculpture galleries, erase from his mind all preconceptions derived from antique remains and modern practices. Having done so, let him reflect on the historical development of sculpture, and he will see this idea of painted figures falling in its true place.

Sculpture of course began in Greece, as elsewhere, with idols. It is the custom of all barbarous nations to colour their idols. The Egyptians, as we know beyond all doubt, not only coloured, but dressed theirs. So did the Greeks. It may be a question, whether the Greeks borrowed their art from the Egyptians, improving it, as they did everything else. Let scholars decide that question. This, however, is certain, that in either case the Egyptian practice would obtain:—

1st. If the Greeks borrowed from the Egyptians, they would borrow the painting and dressing.

2nd. If they did not borrow—if their art was indigenous—then it would come under the uni-

* The following arguments, by Mr. G. H. Lewes, from a perusal of ancient authors, with comments by Mr. Watkiss Lloyd, are appended to the published "Apology for the Colouring of the Greek Court," at Sydenham. We may hereafter go into a consideration of the whole question of polychromy.

sal law of barbarian art; and painting would, any rate, in the earlier epochs, have been nployed. (We know that both painting and essing were employed in all epochs.)

This being so, and the custom being universal, nless the change from painted to unpainted atues had been very gradual—insensibly so, he man who first produced a marble statue ithout any addition would have been celebrated s an innovator. No such celebrity is known.

Ancient literature abounds with references nd allusions to the practices of painting and ressing statues. Space prevents their being opiously cited here. Moreover, many of them re too vague for *direct* evidence. Of those hich are *unequivocal* a few will be given.

Dressing Statues. — Pausanias describes a ympheum, where the women assembled to wor hip, containing figures of Bacchus, Ceres, and Proserpine, the heads of which alone were risible, the rest of the body being hidden by raperies. And this explains a passage in "Tertullian" ("De Jejun," 16), where he com pares the goddesses to rich ladies having their attendants specially devoted to dress them—*suas habebant ornatrices*. For it must be borne in mind that the Greek idols, like the saints in Catholic cathedrals, were kept dressed and orna mented with religious care. Hence Homer frequently alludes to the offerings of garments made to propitiate a goddess: thus, to cite but one, Hector tells Hecuba to choose the most splendid *peplos* to offer to Minerva for her aid and favour. Dionysius, the Tyrant of Syracuse, according to a well-known anecdote, stripped the Jupiter of his golden cloak, mockingly declaring that it was too heavy for summer, and too cold for winter.

["The golden cloak of the Sicilian Jupiter seems scarcely to illustrate the subject of dressing statues—as it was probably not drapery, not cloth enriched with gold—but solid, like the golden Ægis of the Minerva of Phidias, which could be removed and replaced."—*W. W. Lloyd.*]

These *dressed* statues were for the most part *dolls*, however large. The reader must remember that the dolls of his nursery are the lineal descendants of ancient idols. Each house had its lares or household gods: each house had its dressed idols. Statues, in our sense of the word, were, it may be supposed, not dressed; but that they were painted and ornamented there seems to be ample evidence.

Coloured Statues.—If we had no other evidence than is afforded in the great *variety* of materials employed—ivory, gold, ebony, silver, brass, bronze, amber, lead, iron, cedar, pear-tree, &c. it would suffice to indicate that the prejudice about "purity of marble" *is* a prejudice. The critic may declare that a severe taste repudiates all colour, all mingling of materials; but the Greek sculptors addressed the senses and tastes of the Greek nation, and did so with a view to *religious* effect, just as in Catholic cathedrals painted windows, pictures, and jewelled Madonnas appeal to the senses of the populace.

The Greeks made statues of ivory and gold combined. They also combined various metals with a view of producing the effect of *colour*. One example will suffice here. Pliny tells us (lib. xxxiv. cap. 14) that the sculptor of the statue of Athamas, wishing to represent the blush of shame succeeding his murder of his son, made the head of a metal composed of copper and iron, the dissolution of the ferruginous material giving the surface a red glow—*ut rubigine ejus per nitorem æris relucente, exprimeretur verecundiæ rubor*. Twenty analogous examples of various metals employed for colouring purposes might be cited. Quatremère de Quincey, in his great work, "Le Jupiter Olympien," has collected many.

The reader may, however, admit that statues were made of various materials, and that the bronze statues—which were incomparably more numerous than the marble—may have been tinted, but still feel disinclined to believe that the *marble* statues were ever painted. A few *decisive* passages shall be adduced.

Let it be remembered that Socrates was the son of a sculptor, and that Plato lived in Athens, acquainted with the great sculptors and their works; then read this passage, wherein Socrates employs, by way of simile, the practice of painting statues: "Just as if, when painting statues, a person should blame us for not placing the most beautiful colours on the most beautiful parts of the figure—inasmuch as the eyes, the most beautiful parts, were not painted purple, but black —we should answer him by saying, Clever fellow! do not suppose we are to paint eyes so beautifully that they should not appear to be eyes." (*Plato*, 'De Repub.' *lib.* iv. near the beginning.)

This passage would long ago have settled the question, had not the moderns been pre-occupied with the belief that the Greeks did *not* paint their statues. They, therefore, read the passage in another sense: many translators read "pictures" for "statues;" but the Greek word *ανδριας* signifies "statue," and is *never* used to signify "picture." It means statue, and a statuary is called the maker of such statues, *ανδριαντοποιος*. (Mr. Davis, in Bohn's English edition of "Plato," avoids the difficulty by translating it "human figures.")

["This passage is decisive as far as it goes, but it does not touch the question of colouring the flesh. It proves that as late as Plato's time it was usual to apply colour to the eyes of statues; and assuming, what is not stated, that marble statues are in question, we are brought to the same point as by the Æginetan marbles, of which the eyes, lips, portions of the armour and draperies were found coloured. I forget whether the hair was found to be coloured, but the absence of traces of colour on the flesh, while they were abundant elsewhere, indicates that if coloured at all it must have been by a different and more perishable process—by a tint, or stain, or varnish. The Æginetan statues being archaic, do not give an absolute rule for those of Phidias. The archaic Athenian bas-relief of a warrior in excellent preservation, shows vivid colours on drapery and ornaments of armour, and the eyeballs were also coloured; but again, there is no trace of colour on the flesh."—*W. W. Lloyd.*]

Here is a passage which not only establishes the sense of the one in "Plato," but while unequivocally declaring that the ancients painted their statues, gives the reason why the paint is so seldom discoverable in the antique remains. It is from Plutarch ("Quæst. Roman," xcviii. at the end): "It is necessary to be very careful of statues, otherwise the *vermilion with which the ancient statues were coloured will quickly disappear*."

["This passage refers to archaic sacred figures, and at Rome (not in Greece), where after providing for the sacred geese and ganders, the first duty of certain officials on taking office was to furbish the *agalma*, or statue, which was necessary on '*account of the quick fading of the vermilion with which they used to tinge the archaic statues.*' This is an accurate translation and a literal—and implies a difference between the archaic and the more modern in respect of colour, though not necessarily excluding all colour from the latter."—*W. W. Lloyd.*]

Had this passage been generally known the dispute could never have maintained itself. There is nothing equivocal in the use of the word *μιλτινον*, which means "vermilion;" nothing which admits of doubt in the phrase *ῳ τα παλαια των αγαλματων εχρωζον*. And there are abundant notices extant which illustrate it. One will suffice. The celebrated marble statue of a Bacchante, by Scopas, is described as holding, in lieu of the Thyrsus, a dead roebuck, which is cut open, and the marble represents living flesh. People have tried to explain this by saying that Scopas discovered coloured veins in the marble, which he used to indicate living flesh. The explanation is absurd. In the first place, veins do not so run in marble as to represent flesh: in the second, unless statues *were* usually coloured, such veins, if they existed, would be regarded as terrible blemishes; and the very thing the Greeks are supposed to have avoided—viz. colour as representing reality—would have been shown.

But colour *was* used, as we know; and Pausanias ("Arcad." lib. viii. cap. 39) describes a statue of Bacchus as having all those portions not hidden by draperies, painted vermilion, the body being of gilded wood. He also distinctly says that the statues made of gypsum were painted, describing a statue of Bacchus *γυψου πεποιημενον*, which was—the language is explicit—"*ornamented* with paint" *επικεκοσμημενον γραφη*.

["This statue was apparently ithyphallic, and probably archaic. Not drapery, but ivy and laurel, concealed the lower part of it. The colour of the exposed part was not local, but applied to the whole of it."—*W. W. Lloyd.*]

Virgil, in an epigram, not only offers Venus a *marble* statue of Amor, the wings of which shall be many coloured, and the quiver painted, but he intimates that this shall be so, because it is customary—

> "Marmoreusque tibi, Dea, *versicoloribus alis*
> *Inmorem* picta stabit Amor pharetrâ."

And in the seventh Eclogue, Virgil, speaking of the statue of Diana, describes it as of marble, with *scarlet* sandals bound round the leg as high as the calf.

> "Si proprium hoc fuerit, levi de marmore tota
> Puniceo stabis suras evincta cothurno."

And there is a passage in Pliny, which is decisive as soon as we understand the allusion. Speaking of Nicias (lib. xxxv. cap. 11), he says, that Praxiteles, when asked which of his marble works best satisfied him, replied, "Those which Nicias has had under his hands." "So much," adds Pliny, "did he prize the finishing of Nicias" —*tantum circumlitioni ejus tribuebat.*

The meaning of this passage hangs on the word *circumlitio*. Winckelmann follows the mass of commentators in understanding this as referring to some mode of *polishing* the statues; but Quatremère de Quincey, in his magnificent work, "Le Jupiter Olympien," satisfactorily shows this to be untenable, not only because no sculptor could think of preferring such of his statues as had been better polished, but also because Nicias being a *painter*, not a sculptor, his services must have been those of a painter.

What were they? Nicias was an *encaustic painter*, and hence it seems clear that his *circumlitio*—his mode of finishing the statues, so highly prized by Praxiteles—must have been the application of encaustic painting to those parts which the sculptor wished to have ornamented. For it is quite idle to suppose a sculptor like Praxiteles would allow another sculptor to *finish* his works. The rough work may be done by other hands, but the finishing is always left to the artist. The statue completed, there still remained the painter's art to be employed, and for that Nicias was renowned.

Even Winckelmann ("Geschichte der Kunst," buch i. kap. 2), after noting how the ancients were accustomed to dress their statues, adds, "This gave rise to the painting of those parts of the marble statues which represented the clothes, as may be seen in the Diana found at Herculanæum, in 1760. The hair is blonde; the draperies white, with a triple border, one of gold, the other of purple, with festoons of flowers; the third plain purple."

There are still traces visible of gilding in the hair of statues. Even the Venus de Medici has such. And the bored ears speak plainly of earrings.

While the testimony of antiquity is thus explicit, there is the still more convincing testimony of living eyes, which have *seen* this painting on statues. The celebrated Swedish traveller, Akerblad, says, "I am convinced that the practice of colouring marble statues and buildings was much more frequent than is supposed. The second time I visited Athens, I had opportunity of narrowly inspecting the frieze of the Temple of Thescus, and I came away convinced it had been painted." Quatremère de Quincey mentions statues he has seen, and refers especially to the Apollo in the Louvre, made of Pentelic marble, almost all over the naked surfaces of which a trace of red was faintly perceptible: the same with a Diana at Versailles; but he adds, "these traces grow daily fainter." The eyes and mouth of the colossal Pallas de Velletri still retain the violet colour.

Such are a few of the evidences. On examining them we find them not only unequivocal in themselves, but complementary of each other. Living testimony, supposing it to be accepted without demur, would not suffice to settle the question of what was the ancient practice; for it might not unreasonably be argued that these traces of painting on the statues are only evidences of a degenerate taste like our

whitewashing of cathedrals—and no evidences of Greek artists having perpetrated such offences against taste. But when it is seen, by the testimony of ancient writers, such as Plato, Pliny, Plutarch, and Virgil, that the Greek artists *did* colour their statues, the fact of the statues being discovered with traces of colour is explained, while on the other hand this fact helps to clear away all trace of doubt which might linger in a supposed equivocalness in the passages from ancient writers.

G. H. LEWES.

["As regards archaic sculpture in Greece, we may be considered to have decisive proof, from Pausanias and others, that the ancient sacred figures, that were rather venerated as idols than admired for art, were often entirely coloured—flesh and drapery with vermilion, perhaps conventionally and rudely enough, as we find on the archaic vases, the flesh of women painted white, and that of men black.

The marble statues of Ægina, and others, that are works of truly fine art, offer a second form of the application of colour. Here the eyes, lips, draperies, ornaments, and details of arms, have their true local colour, but the monuments themselves only give us the negative evidence with respect to the flesh, that, if coloured at all, it must have been less solidly. Unless it were tinged or stained, it is difficult to understand how the effect of the coloured part could have been otherwise than very disagreeable—spotty, patchy, crude, ghastly to the last degree; but the experiment might be tried.

On the other hand, it is most certain that in the chryselephantine statues, the Minerva of the Parthenon, the Jupiter Olympian, the Juno of Argos, by Phidias, and by Polycletus, the greatest variety of colour was applied throughout—or rather variety of colour was given by the different materials of which these figures were composed, ivory, gold, various coloured woods, stones, and gems. But painting or staining in the proper sense of the words, was certainly applied to some portions; as, for instance, Pausanias states that the robe of Jupiter had lilies painted on it.

The application of colour to the details of the architecture, at least, and to portions of the architectonic sculpture, would be absolutely required, to harmonise them with the chief object in the temple itself.

Lastly, as to the flesh of marble statues of the best age, no rule can be deduced from this from any practice that obtained in primitive times, or from chryselephantine works, which seem to have been in designed contrast in the whole of their treatment.

The argument for colour on marble flesh of the best age, from existing remains, so far as I am aware, is equal to zero. But the passage respecting Nicias and Polycletus is of very great force. There is no escape from its application to marble statues, nor from the great skill that there was occasion and scope for in the *circumlitio*. Whatever this tinging or colouring may have been, we may be sure that it was so employed as to heighten the purest effects. The edge and sharpness, and smoothness and brilliancy, of the material, cannot have been destroyed by it; rather sobered it may be, but still enhanced. Doubtless it aided the peculiar glories of sculpture, the display of forms, by rendering them more visible—idealized rather than imitated nature, and treated every part under the law of regard to the supreme intention and sentiment of the whole. The same remarks (such as they are) apply to bas-reliefs, which, however, have difficulties of their own.

Vitruvius (vii. 9), after describing the preparation of *minium*, or vermilion, goes on to speak of its liability to change colour from the action of direct sunlight, and gives instructions for protecting it: he does not mention the medium employed with the colour, but as it is insoluble, we must assume the use of size, as in other instances, or gum, &c. The wall he is thinking of is apparently stucco.

'When the wall is painted with vermilion, and dry, lay on with a brush (of bristles, a hard or rough brush), Punic wax melted over the fire, and a little tempered with oil: then by means of hot coals in an iron vessel, warm the wall well and make the wax run, and equalise itself: afterwards rub it with a wax candle and clean cloths, as nude marble figures are treated.'

Pliny (xxi. 14) gives the preparation of Punic wax by a process of which the chemical result, according to Dr. Turner, was a soap of twenty parts wax to one of soda. He also (xxxiii. 7) describes the same process as Vitruvius above, apparently copying him, or a common authority. The wax, he says, is applied hot, heated with coals (admotis *gallæ* carbonibus, whatever they may be), and then rubbed with wax candles, and afterwards with clean linen cloths, as marbles also become bright (or shiny), (sicut et marmora nitescunt).

Now how much of the treatment thus expressed applies to sculpture? Putting the case most strongly, it might be said—the whole; and that nothing less than the whole, will accord with the *circumlitio* of statues mentioned elsewhere; and by applying the whole we might connect these notices with those of Plutarch and Pausanias of the employment of vermilion in colouring statues, though these latter go for very little as applicable to the best works of the best time. The construction of the words of both authors implies in strictness that the wax and linen rubbings of statues were applied to the wax previously laid on and heated.

The treatment of statues is referred by Vitruvius specially to the nude: it seems, therefore, to have had connection with a design to assist or heighten the effect of the sculptured nude flesh, as distinguished from drapery, &c. This would be natural enough, though no colours were employed, or not for every part; but if they were we must suppose that Vitruvius has vermilion in his mind, leading him to limit his observation. Pliny's expression shows that, even assuming colour, there is no opaqueness in question.

If a verdict were to be given on this evidence as it stands, I am much disposed to think that it must be in favour of a tinge of vermilion, protected by a brilliant varnish, having been applied to the nude portions of (?some) marble statues in such a manner that both colour and varnish assisted the fine surface and brilliant effect of the lucent marble. So much for this part of the evidence and its bearing on a final decision."
—*W. W. Lloyd.*]

THE ARCHITECTURAL MUSEUM, CANON-ROW, WESTMINSTER.

A *conversazione* will be given at the Architectural Museum, Canon-row, Parliament-street, on Thursday next, the 29th, at which Earl de Grey will preside; and with the intention of informing such of our readers as have not seen the collection, we have engraved a view showing part of it. The location is an odd rough place, but the contents are exceedingly interesting and valuable. A detailed catalogue is now in a forward state, to give the name, style, &c. of every specimen in the collection. There are now in all nearly 6,500 objects in the museum, of which 3,500 are casts from ancient examples, about fifty from natural leaves, thus to place the modern art-workman on a level with the workman of past times, who copied or conventionalised from nature and not from precedent; a number of fragments of stained glass, woodwork, encaustic tiles; about 750 seals, and more than 1,500 rubbings of brasses. In addition to these there is a large number of photographs. It is the wish of the committee to make the museum as practically useful as possible, but a very great hindrance to this is the need of a better entrance, and a more direct road from Parliament-street. It is intended to memorialize the occupants of the terrace adjoining, permission having already been obtained from the office of Woods and Forests, to effect this. It is wished also to interest, if possible, the general public in the contents of the museum; and for this purpose funds are earnestly asked, to enable the committee to increase the number of the officers of the museum. In the event of the collection being, by dint of perseverance, made so far attractive as to invite the public, it is hoped a small annual grant from Government may be obtained to put the museum on a level with other public collections. It is to be hoped that those who feel the value of such a museum will practically aid it. Donations may be sent to Mr. Scott, or Mr. Godwin.

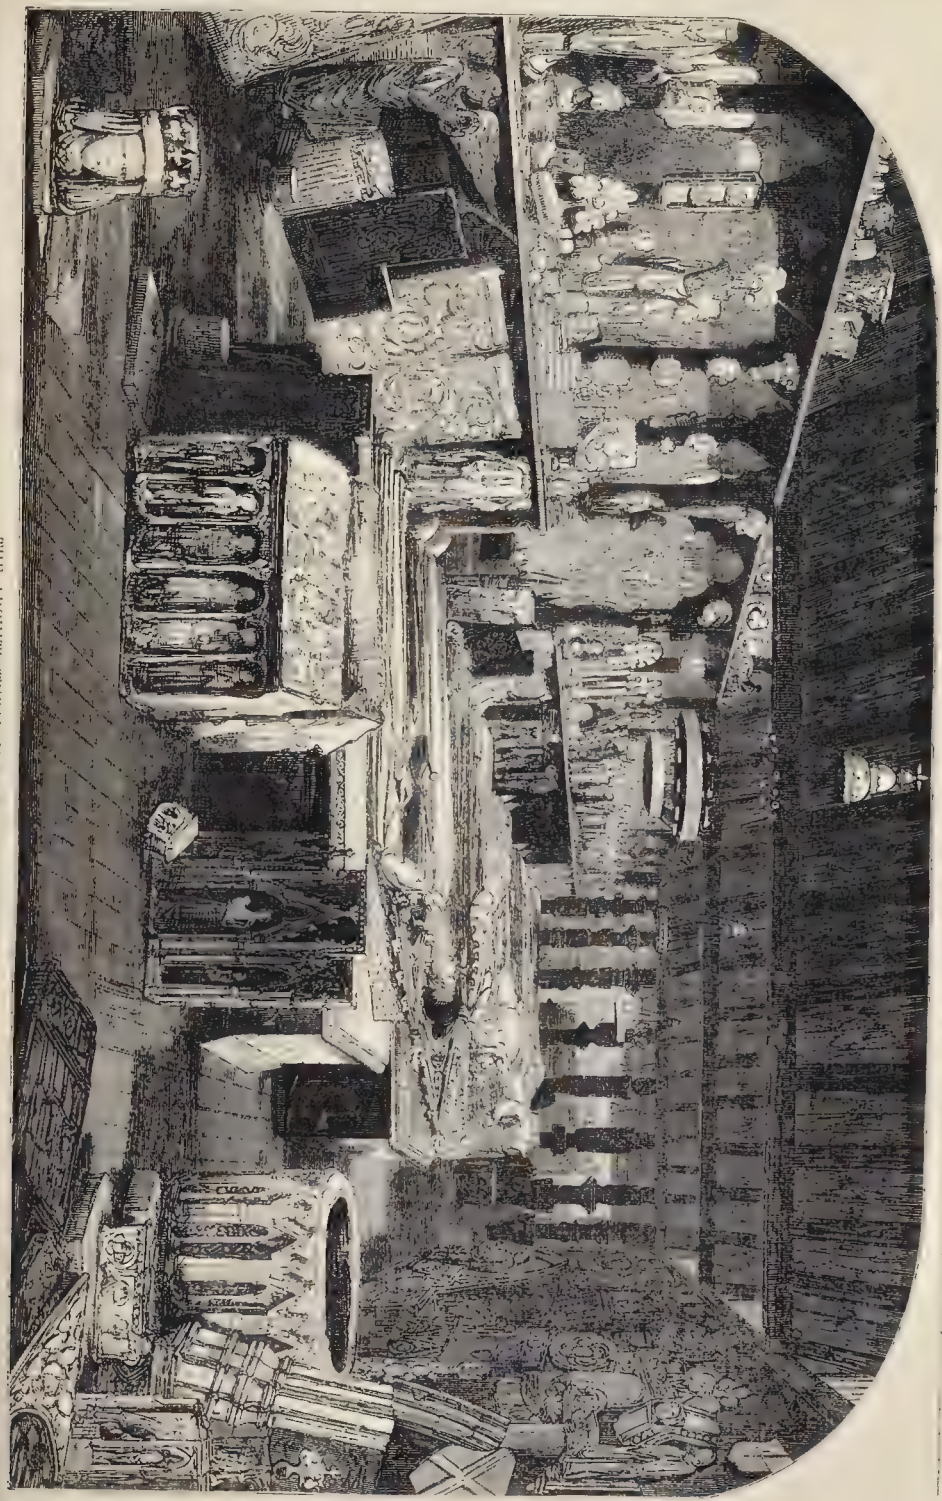
A number of suggestions are now before the sub-committee of the museum, for the purpose of rendering it more thoroughly and practically useful to the profession, and to art-workmen and students.

One is the amalgamation of some of the already existing societies with the Museum, thus to bring together all those interested in the same pursuits, and thus affording to them the advantage of having always present at all meetings so many specimens for the illustration of papers, lectures, &c. It is also contemplated to have a yearly exhibition of modern specimens of fine-art workmanship, thus in each successive year to show, as far as may be, the progress being made in fine-art workmanship, and in those manufactures which more particularly have relation to architecture, and also for the purpose of showing what it is that has yet to be done in the attempts now being made to rival the excellence of the old work, as to material, form, colour, &c.; the great object of the collection being to influence, as far as possible, *common* and *every-day practice*. Many of the leading manufacturers and art-workmen have already signified their willingness to aid in this proposal.

It was early the desire of the committee to have delivered a series of lectures at the rooms of the Museum, on different subjects relating to architecture: this intention has only been prevented by the want of funds to provide the necessary fittings required for such a purpose.

Arrangements have now been made for supplying copies of the different specimens in the collection, when required, to the various provincial societies, art-workmen, and others needing them. It is intended to supply them at as moderate a charge as will pay the expense of their production.

It has also been suggested to add to the collection a series of the materials used in general architectural practice, as specimens of marbles, woods, stones, metal, paper-hangings, stuffs, &c.



It is desired to consider the collection as the nucleus of a complete *national collection of mediæval art* in all its branches; as being the first attempt ever made in this country to form, for the purposes of the public, such a collection. When in a more enlarged space, and a more complete state, it will, it is believed, form one of the links to complete the chain of facts gathered at the British Museum in the collection there commenced of Oriental and Greek and Roman art; and at Marlborough House, in the collection there commenced of Renaissance work.

A morning class now meets on the first three days of each week for the study and *practice* of fine art workmanship, for the present (till further arrangements can be made) in stone and wood only, the intention of this class being to draw the attention of architects and others to the actual *results* of art-education as well as to the *means*.

It is intended to hold in the month of July one or two evening meetings for artist-workmen thus to encourage them to make a practical use of the museum.

The accompanying drawing shows the south side of the museum. The font is from Patrington, Yorkshire. The monuments are those of Queen Eleanor, from the Abbey, Westminster; Edward III. Hugh de Northwold, eighth Bishop of Ely, from the Cathedral, Ely; Henry III. a Bishop Hereford; Acquablanca, Bishop of Hereford; and the Lady Prioress, from the Cathedral, Chichester. To the left are a number of details from French Gothic, and the statuettes of the Twelve Apostles from the shrine of S. Sebald, Nuremberg. Those to the right are from churches and other buildings not known.

GILLESPIE'S PATENT INCLINOMETER.—Various recommendations of this new instrument are quoted by the *Nottingham Guardian*, which also gives a personal recommendation of it, as a very useful means of insuring accuracy in levelling, sloping, drain cutting, and all road and railway work. It is said to be easily worked even by the common labourer, being simple, so that by its means "levelling is brought within the reach of all men of ordinary capacity."

THE ARCHITECTURAL MUSEUM, WESTMINSTER.

PROVINCIAL NEWS.

Boston.—It has been decided that the new Corn Exchange and Athenæum shall be erected on the site of the Green Dragon Inn, in the Market-place.

Bardney.—The Great Northern Railway bridge over the Witham, a large and costly structure, is now undergoing considerable repairs, having already been much injured by the dry-rot.

Runham.—A new national school-room has been commenced here, through the liberality of several local friends to education. The first stone was laid on the 6th inst. by Mrs. Brightwen, the wife of the lord of the manor. The architect is Mr. Laing, the town surveyor of Great Yarmouth.

Harwich.—New gasworks are about to be erected here under the superintendence of Mr. Church, of Chelmsford. Messrs. Butcher and Wilding are the contractors. The first stone was laid on 5th inst. What with the new gasworks, the pier, and the railway, Harwich will soon be qualified to take her stand in rank and importance with the towns in that vicinity.—— For dredging the harbour and improving the breakwater, the original estimate was 110,000*l.* the whole of which has been provided in former years; but an additional sum of 15,000*l.* for the removal of shoals, not included in the original estimate, has been taken for the current year. Harwich harbour is noticed by the commission of 1845 as one of the finest in the kingdom, and the only safe harbour along this coast. At that period, however, except a channel 18 feet in depth, too narrow for general purposes, the entrance was not deep enough to admit ships of more than 12 feet draught at low water spring tides. In the October of last year there was only one point at which the width of channel with this depth was as little as 500 feet, and further clearances have since been effected.

Banbury.—At a recent meeting of the Local Board of Health, as reported in the local *Guardian*, it was stated that a bill for 292*l.* 8s. had been sent in by Mr. John Davis, now of the firm of Davis and Davids, for drawing general and detailed plans of the district. Two items caused some discussion. One was for journeys to London, 2*l.* 2s. and the other 7*l.* 12s. for paper used in preparation of the plans. By the contract it appeared that Mr. Davis was to find all materials, which word the clerk construed to mean paper and other things used, but the surveyor said paper was never meant to be included in a charge for preparing plans. In the end, the item of 7*l.* 12s. was crossed out, but the other, having been satisfactorily accounted for by the surveyor, was allowed to stand, and the sum of 284*l.* 16s. was ordered to be paid.

Tenbury.—On Thursday, in last week, the foundation-stone of a new Baptist chapel was laid by Mrs. Heritage, wife of the pastor. The chapel is to be 46 feet by 32 feet, to be erected under the superintendence of Mr. G. B. Long, of Witney, architect, who has contributed the plans, and consented to superintend the work, gratuitously.

Warwick.—Mr. Green, of this town, and Mr. Hutchings, of Snitterfield, have become the contractors, it is said, for making bricks for the new county jail.

Atherstone.—The corn-exchange committee met on Tuesday in last week to receive tenders for the erection of the Exchange, when Messrs. H. J. Spencer, Potter, and Meredith, obtained the contract.

Nantwich.—The following are the names of all who tendered to the Nantwich Board of Health for works advertised lately in our columns. Those marked with an asterisk are the successful tenderers:—Contract No. 1, for supply of cast-iron socket-pipes for water supply:—*Cochrane and Co. Dudley; Beveridge and Co. Preston (Cheshire); Wilson, Law, and Co. Glasgow; Nightingale and Co. Preston (Cheshire); Barrow, Staveley, near Chesterfield; the Brymbro Company, near Wrexham; and R. Jobson, Dudley. No. 2, for earthenware pipes, &c. for drainage:—*E. Brooke, Huddersfield; Williams, Bedworth, near Coventry; Haywoods, Burslem; Farnley Iron Company, near Leeds; Doulton and Co. St. Helen's; and Gibbs, Canning, and Co. Tamworth. No. 3, for laying jointings and fixing cast-iron socket-pipes:—*W. Smart, Nottingham; and Beveridge and Co. Preston. No. 4, for construction of brick sewers, and laying and jointing pipes, &c.:—*W. Smart, Nottingham; Forbes and Williams, Etruria; Fuller, Sandbach; Bowker, Nantwich; Oldham, London; and Knight, Manchester. No. 5, for making filter-beds, arched reservoir, &c.:—*W. Smart, Nottingham; and T. Bowker, Nantwich.

St. Helen's.—The improvement commissioners here have appointed Mr. John M'Manus, of Ormskirk, successor to Mr. Daniel Burrow, as town-surveyor, at a salary of 120*l.* per annum; and as inspector of nuisances, at a salary of 30*l.* per annum. Mr. M'Manus has for several years filled the office of town surveyor at Ormskirk.

Newcastle-upon-Tyne.—The vicar has proposed a scheme for building ten new schools in this town, at a cost of 20,000*l.* The proposal has been adopted at a large public meeting, at which the vicar announced that the Bishop of Durham had promised a subscription of 250*l.* and that some other sums had been collected; and, as they might probably expect about 7,000*l.* from the Privy Council, there would be 12,000*l.* required to be raised by voluntary contributions. He had had the curiosity to get the various trades of the town classified under different heads, according to the different kinds of scientific knowledge useful or necessary in those trades, and he found, in connection with building in the town, 474 tradesmen who, with their workmen, would require some instruction in levelling, geometrical drawing, taking plans, and in those principles of experimental science connected with ventilation, sewerage, and the heating and lighting of buildings. Coming under the general designation of "mechanical pursuits," there were 1,380 manufacturers or tradesmen requiring some preliminary elementary knowledge of mechanism. Of trades, manufacturers depending upon the experimental sciences, particularly on chemistry, there were 430. However, he did not press this part of the scheme upon them; but they should at least introduce drawing and "object" lessons into the schools.

Edinburgh.—A building has been erected at Broughton, intended as a new Heriot School.

Ayr.—The opening of the Ayr baths is announced in the local *Advertiser*. The old baths have been converted into two dwelling-houses, and new baths erected in juxta-position with them. They have been divided into two classes, the first containing four baths and the second two.

THE UNPROTECTED WATER-GATE.

I AM glad that I wrote to you upon (what I must beg still to call) Inigo Jones's Water-gate, since my having done so has been the means of proving that although that admirable little structure is disowned and unprotected, it is not without its admirers, who would protect it were they allowed to do so.

It is clear from what your correspondents, "J. W. P." and "J. C. C." have obligingly stated, that this beautiful gate is at present exposed to other assaults than those of "time and tide," and might be carried by just such a *coup de main* as that which carried off the clay king, George II. and his leaden charger. It is also clear that the late Duke of Northumberland was but poorly advised when he offered 4,000*l.* to the authorities of St. Martin's parish for the privilege of transferring the graceful structure to his grace's seat at Sion: brass has been found to do in this matter what gold could not achieve. The fact of the above-named authorities not taking the golden bait will I fear be held by many persons as an irrefragable proof that the parish of St. Martin had no jurisdiction in the matter. Under these circumstances, it seems most desirable that the Government should act upon the suggestion of your correspondent "J. C. C." and I for one should be glad to hear that Sir William Molesworth, whose province I believe it is to attend to these matters, had placed "the gate" under the care of your correspondent, whose thorough appreciation of its merit as a work of art, coupled with the fact that his place of business is on the spot in question, would seem to offer a sure guarantee of his making a trustworthy and vigilant guardian of the treasure committed to his charge.

It seems somewhat puzzling that the Government, who have lately taken under their special protection some sculptured men and horses, most of which are not worth more than the material of which they are composed, should allow a remarkably fine and interesting specimen of architecture to stand thus in peril,—but "when the horse is stolen we shut the stable-door."

Respecting the question of who designed the "Water-gate," I will beg to suggest to your correspondent "G. B." that he would greatly aid in the solution of that problem were he to favour those of your readers who take an interest in such matters with a full account of the other "eminentt workes desined by the master mason, Nickolas Stone." A. W. H.

SYPHON WATER SUPPLY.

A CORRESPONDENT, who says he hears that districts are being supplied with water by means of large syphons, asks to be informed of the name of either of the towns. We do not know of any town in which a syphon is used for bringing in water. Such case must be exceptional, and never can become general. Many persons think water is lifted or raised by a syphon. This, in so far as the delivery of the water from a syphon is concerned, is a mistake. Water will not rise or flow through a syphon higher than the pressure of the atmosphere will force it (about thirty feet), and it must be delivered at a lower level than that from which it is drawn. The only possible use of a syphon in a town water supply will be to avoid tunnelling or a deep excavation, to lay the pipes at a proper level. A lake, river, or reservoir may have an intervening space of rock or earth, through which it might be expensive to tunnel. If this land does not exceed thirty feet elevation above the water to be conveyed, and the town is below the level of the source, a syphon may deliver water in such town. The flow or delivery of the water will, however, be retarded or diminished in proportion to the height of the syphon. Any practical application of this means of conveying water must be contingent upon a concurrence of natural conditions; and if a graduated fall or flow can be obtained at any moderate cost, this ought to be preferred.

THE STRIKES AT NOTTINGHAM AND SHEFFIELD.

THE joiners at Nottingham who struck against machine-work in mouldings, &c. have not, as a body, returned to work, we are sorry to say, but, on the contrary, are being fast superseded by men brought from Manchester and elsewhere, many of them doubtless new and raw hands, who will now become initiated into machine-work, which those in employment might have kept in their own hands and in the hands of those of their union or society fellows, who on their account were turned out until the whole gave in. The leaders of these poor men, it appears, are preparing to secure their own retreat, as usual, leaving those of their followers who have stood by them too long, in the lurch. The men connected with several shops have also given in. Messrs. Walker's hands have been allowed to return to work on condition that they will fix or use any machinery or machine-prepared goods their employers may require them to do; and some of them are busily engaged in fitting machinery to be worked by steam. This, the first return to reasonable conduct, has been followed in other instances, the men employed by Messrs. Ferguson and Son and those by Messrs. Wright and Scofield having adopted a similar course, and most of them in addition have withdrawn their support from a society which endeavoured to drag them into the commission of acts both mischievous and illegal. Messrs. Greensmith and Lacy, and other employers, have filled their shops with new men, from Birmingham and other places, and numbers more are coming to take the places of those who have so far compromised themselves as to be obliged to leave the town. There were at the end of last week not more than from sixty to 100 vacancies, which will soon be filled up, as numerous applications are daily being received from men at a distance, who, if good workmen, are readily

engaged for six or twelve months certain, at full wages.

It is painful to hear that the brutal outrages which have so often recurred at Sheffield, and which are rapidly withdrawing capital and trade from that town, are at present as bad as ever they were. The system of "rattening," as it is called, and which includes all sorts of diabolical acts *not* short of assassination, is as active at Sheffield as a very similar system ever was in the savage wilds of Ireland. The celebrity of Sheffield for cutlery and other metalwork at this rate will soon be a sad story of the past, we fear.

The serious detriment to a trade produced by strikes, even where unaccompanied by such brutality, appears in the history of the shipwright trade of Liverpool, as lately notified in the *Spectator*. Some time since the unionists demanded and received 15s. a-day wages, and in some instances were actually paid at the rate of a guinea a-day. The workmen doubtless then imagined that the trade was getting on swimmingly: and so it was, for it sailed out of port nearly altogether. In short, the consequence was, that the cost of repairs in the port of Liverpool became excessive. Shipowners sent their vessels to other places to be repaired. American masters got their work done, whenever it was possible, at American ports, actually taking materials away with them from Liverpool itself. Lastly, the Admiralty have resolved that no more transports shall be fitted out there. Wages have now therefore already fallen to 10s. a-day, and probably they will go much lower. Moreover, the demands of the union men have led to the introduction of shipwrights from other ports, so that, with work greatly diminished, there is now a much larger supply of hands; and many doubtless are, and more still will soon be, idle and starving. Such are the unhappy results of injudicious (though excusable) efforts to improve the condition of a class of workmen by "union," and by forcing wages up to an unnatural and impracticable extent.

RAILWAY CARRIAGE LAMPS.

THESE lamps are open to very great improvement, and by a very simple alteration. At present the air required for combustion is only supplied by an orifice immediately over the flame, and through which the vitiated and heated air has to escape; and in consequence the descending current has to struggle with the ascending, and only an imperfect and corrupted supply finds access. Were there a second orifice to admit of a current to feed the flame, apart from one for the escape of the smoke, there need be no apparent smoke, and the light would be far greater; for as these lamps are now constituted, a large portion of the oil is evaporated and carried off unconsumed, from the want of oxygen for its combustion. The effect is the same as that of the neglected wick in an unsnuffed candle, or too high an exposure of the cotton in an oil-lamp. Some years since, at an interesting lecture at the Royal Institution, the interruption here pointed out to the necessary supply of air for the support of the flame was shown by exhibiting a light in a lamp, open only on the top, and very similar to the railway lamps. With only one orifice the light burnt dim and smoky, but on merely dividing the orifice by placing a piece of tin across it, so as to make two channels out of one, and thus allow of a chimney for the exhausted air, and a free passage to a descending current, the light immediately brightened, and the effect was produced that is so much wanted in railway lamps. I must confess my surprise that so little science has been shown in the formation of these carriage lamps, when the advantage of good light must be so highly appreciated, and the want of it has been so generally felt. H. D.

REGENT-SQUARE BOARD OF HEALTH, ST. PANCRAS.

THE first half-year's Report of the operations of this Local Board of Health (the first *quarter's* report was mentioned some time ago), shows how much may be done by well-directed energy at a small cost. Praise is due to Mr. E. C. Robins, the honorary architect, for much of the work. The Report starts with the assertion that,—"It is folly to question the present need of active sanitary measures, so long as the facts detailed in 'London Shadows' remain undisputed and indisputable."

Lord Palmerston has recognized their efforts with commendation; and the Metropolitan Commissioners of Sewers have expressed "the gratification which the commissioners have experienced on ascertaining the beneficial results which have attended the exertions of the Board."

The Report shows that "639 *separate sources of infection* have been, or are about being abolished, by the removal of cesspools, the renewal of drains, the trapping of sinks, and the removal of refuse," and that the total expenses incurred by the board, including printing and inspector's salary, has been less than fifty pounds!

"This is what has been effected," it continues, "in a few months in this district, which contains but the 280th part of the total number of the inhabited houses of London. Is it, therefore, unreasonable to assert that 280 times the good might have been achieved in the same time, had similar means been resorted to, by every district in the metropolis? Granting the fairness of this assertion, the conviction is forced upon us, that, during the past winter, no less than 177,920 separate sources of infection might have been abolished, or in course of annihilation; eight acres of evaporating surface of fecal matter (with an average depth of 2 feet 6 in.) might have been obliterated; and 270 miles of foul house-drains might have been renewed, cleansed, or in course of being so treated."

The Regent-square Local Board of Health have set an admirable example.

A PRIZE FOR ARCHITECTS.

I AM desirous of directing the attention of my brother architects to a splendid opportunity for distinguishing themselves.

In your last two impressions an advertisement has occurred, inviting architects to send in designs, specifications, and estimates for "laying out, planting, fencing, and decorating four acres of land at Sutton, and erecting thereon a gentleman's house, of plain classical exterior, with lodge, large entrance hall, drawing, dining, and morning rooms, library, conservatory, &c. Day and night nurseries, bed, dressing, and bath rooms, front and back staircases, kitchen, scullery, ample offices, &c. &c." And what is the *quid pro quo* for all this? Hear it, ye who denounce architecture as a badly paid profession. Hear it, ye who complain that art is not encouraged in this country. It is A TEN-POUND PRIZE!

"The 10*l.* prize will be given to the candidate whose plan, specification, and estimate is approved, but the unsuccessful competitors will not receive any remuneration, *but* their designs will be returned to them. The plans, &c. to be sent to (a metropolitan brewery company) where may be seen the proprietor's own design of the ground plan and plan of the land." So you see, sir, the proprietor has made a plan already, and knows *its* value; hence his liberal offer to architects, which I trust will be responded to *as it deserves*. There is, however, one serious omission in the conditions, which it is perhaps not yet too late to rectify. It is *not stipulated* that the architect must find the money to build the house, as well as the brains to design it, for the 10*l.* prize. This is a sad oversight.

Seriously, however, what an immense amount of ignorance of the real position and functions of an architect do such advertisements indicate, and how low must be the public estimate of the value of an architect's services, when insults such as these are daily offered to our profession.

A YOUNG ARCHITECT.

Notices of Books.

The Works of Oliver Goldsmith. Edited by PETER CUNNINGHAM. In four volumes. Vols. III. and IV. London: Murray. 1854.

WHO is it that will not be glad to see Oliver Goldsmith in a new dress—not exactly like one of his own extraordinary outfits, peach-hued coat and scarlet breeches, but in outer covering of mild and spotless blue, and inner man in "black and white" of the very best texture? It refreshes one even to have a glimpse of these his cerulean coat-tails in passing. We have already done due honour to the first instalment of this very handsome issue, and the remainder we find is equally up to the mark. Such publications will do credit to printer, stationer, publisher, and editor. We are glad to see so good a reprint of substantial and first class authors, and hope to see many more of them, in rank and file with just such garnishments. The two concluding volumes of Goldsmith's works now issued contain even a larger mass, so far as regards quantity of material at least, of interesting and amusing matter than the former two, inasmuch as many of the author's unacknowledged productions have been judiciously reprinted in a smaller type, excluding, however, all in his hack labours for publishers, except what seemed really worthy of the reprint. The third volume contains "The Bee," "Essays," "Unacknowledged Essays," and "Prefaces, Introductions," &c.; the fourth, "Biographies," "Reviews," "Animated Nature" (selections merely), "Cock-lane Ghost," "Vida's Game o Chess" (now first printed from the origina MS.), and finally the doctor's very characteristic "Letters," which, though they don't bear him out in his solemn declaration to Dr. Grainger that "he never wrote a letter in his life," are just few enough to make us "wish," like *another* "Oliver," for "more." What a quaint and characteristic one the first, to his mother, full of plausible and humorous explanations and excuses for foolish conduct, is! One feels, in reperusing it, as if he were deep once more in all the tragic-comic adventures of the worthy "Vicar of Wakefield" and his exemplary family, of which we had almost said that Noll himself was both the brightest and the darkest gem—the rich carbuncle, as it were, which graced the placid vicar's troubled life,—or the long-tailed comet sweeping far out of the range of the other "wandering stars," which studded his little heaven of domestic serenity—a heaven replete, nevertheless, with clouds, and showers, and thunderclaps, while yet above it all the vicar shone, clear and calm as the orb of night itself.

The genius of Goldsmith was more like a wonderful series of special instincts in some otherwise not remarkable animal, than the every-day manifestation of the natural and ordinary powers of a *great man*.

There was really something preternatural in the subtlety and the variety of this genius. It is said somewhat reproachfully of Goldsmith, that he "never would allow a superior in any art, from writing poetry down to dancing a hornpipe;" but did he not really excel in all he wrote, if not in all he either said or did? Would not his "Deserted Village," have itself alone immortalised any other man? Would not his "Vicar of Wakefield" have formed sufficient capital for some third immortal. Would not "She stoops to conquer" have alone supplied another celebrity with a name for ages? Even independent of all these, too, his essays, his poetry, his "Animated Nature," and his "History of England," would have left him the rank of no mean author. But it is by no means to the positive merit even of his best efforts that we allude, when we say that there was something preternatural in them: we merely meant thereby to indicate an appreciation of the very strange contrast between the author as he wrote, and the man as he talked and acted: this was, indeed, the contrast between poor Poll and the Angel. It reminds us curiously of a passage in an old book, under the title of "Centrum Naturæ Concentratum," which happened to turn up to us, amongst others, in the British Museum library, the other day. The author,—whose name was "Alipili," and who made some pretension to preternatural faculties himself, and was an old Egyptian — whether "learned in all the wisdom" of the Magi, we know not,—in speaking of "a Magus," whom he says he knew, and in expatiating on the wonderful *Genius* by whom he was guided, or through whom this wisdom flowed,—says positively that in his ordinary moments, or without this Genius to speak in him, this Magus "had scarce the reason of a man." So was it with poor Goldie: and even he himself,—whatever pretension he might make to dancing hornpipes—ay, or of playing the flute to them—or of "piping while he danced,"—seems to have been conscious enough of his own defects; for in his epigrammatic poem of "Retaliation," called forth by that very emulative spirit, and to which particular instance the somewhat reproachful criticism on his pretensions alluded, he epigrammatizes himself by declaring that—

> "Hickey's a capon, and by the same rule
> Magnanimous Goldsmith's a gooseberry fool."

The point of this poem, it will be remembered, was embodied in the following lines,—

> "Here, waiter, more wine! let me sit while I'm able,
> Till all my companions sink under the table;
> Then, with chaos and blunders encircling my head,
> Let me ponder and tell what I think of the dead."

Appended to it by the way, Mr. Cunningham presents us with a new *morceau*, consisting of an interesting account, now first printed or even referred to by any biographer or editor of Goldsmith, of the reason why that poem was written. This account is given in a MS. in Garrick's hand-

writing, and doubtless of his composition, which was found among the Garrick papers. It intimates that "Retaliation" arose from Goldsmith's determination to try his epigrammatic powers with Garrick himself, who here gives his own epigram on Goldie, in his own words, which materially correct the received copies of this extempore distich or epitaph, and are as follows:—

"Here lies Nolly Goldsmith, for shortness called Noll,
Who wrote like an angel, but talk'd like poor Poll."

Noll, let us add, gave Garrick a Rowland for *his* Oliver—or Nolly rather, even in the preliminary *dishing up* of his cronies before he laid them *dead* drunk below the table:—

"Our Garrick's a salad; for in him we see
Oil, vinegar, sugar, and saltness agree."

Davies, in his life of Garrick, intimates that it is believed the sum of all that can be said for or against Garrick may be found in Goldsmith's "epitaph" on him as he lay—by poetic license—below the post-prandial slab, where spirits oft do mingle—red spirits and white, at least, if not, too, black spirits and grey—black jack, at least once on a day.

We need say little more than we have already said in commendation of this new edition of Goldsmith, which, by-the-bye, we must remind our readers, forms but an item in a series of many works we hope yet to come under the title of "Murray's British Classics." We cordially recommend it.

Miscellanea.

Paris International Exhibition for 1855.—The Board of Trade Department of Science and Art is making arrangements to provide for a representation of British art in the Great Exhibition which will take place next spring. For painting, the presidents of the Royal Academies of London, Edinburgh, and Dublin; the presidents of the Societies of British Artists, of the Old and New Watercolour Societies, and of the National Institute of Art, together with the art superintendent of the Department of Science and Art on the part of the Board of Trade, have been requested to form a committee to consult on the best means of carrying into effect the wishes of both countries. To make suitable regulations for sculpture, Sir Richard Westmacott, the Professor of Sculpture in the Royal Academy; Mr. Calder Marshall, on the part of the Royal Scottish Academy; and Mr. John Bell, have been requested to form a committee. For architecture, the Board of Trade has asked the assistance of Professor Cockerell, of Professor Donaldson (Hon. Secretary for Foreign Correspondence of the Institute of British Architects), and Mr. Scott, as Treasurer of the Architectural Museum; while for engraving and lithography, which also form a part of the tuition of Fine Arts, Mr. J. H. Robinson, Mr. Lane, and Mr. Wornum have been requested to give their assistance.

Architect to Ecclesiastical Commissioners, Ireland.—Mr. Alexander Hardy, of Armagh, has been appointed inspecting architect under the Ecclesiastical Commissioners for Ireland.

Sale of the Metropolitan Roads.—The following are the roads which were let, with the rent they produced last year, and the price at which they were now put up:—The Kensington, Brentford, and Isleworth roads, which last year realised 16,440*l.*, were offered at 15,900*l.* and produced 15,910*l.* The Tyburn and Uxbridge roads, went for 9,730*l.*; last year they realised 9,900*l.*; the commissioners put them up at 9,500*l.* The rent from the Harrow roads last year was 1,690*l.*; they went for 1,150*l.*; 1,090*l.* was asked for them. The Highgate and Hampstead roads returned 18,010*l.* for which sum they were knocked down. The price of them was 17,800*l.* The Stamford-hill, Seven Sisters, and Green-lane roads fetched 8,110*l.* against 8,240*l.* last year, 8,100*l.* being asked for them. The Hackney and Lea-bridge roads were knocked down for 5,530*l.* against 5,700*l.* the produce of the previous year, the price asked for them being 5,500*l.* The Marylebone and Finchley roads produced 2,010*l.* against 2,110*l.* the commissioners asking for them 2,000*l.*; and the New North roads were purchased for 760*l.* that being the rent of the previous year. Messrs. Bolton, Levy, and Ambler, were the purchasers of all the roads except the last (the New North). There was no bidder for the Kilburn and Edgeware roads, the rent of which was, last year, 3,920*l.* the sum asked for them by the commissioners being 3,600*l.* The tolls produced 64,510*l.* the rent returned last year being 65,360*l.* leaving a deficiency of 350*l.* The Kilburn roads will be taken by the commissioners.

Scientific Training for Practical Pursuits.—A farewell address delivered to the students in the school of engineering at Trinity College, Dublin, Hilary Term 1854, by Mr. R. V. Dixon, A.M. Professor of Natural Philosophy in the Dublin University, has been published by Hodges and Smith, of Grafton-street in that city. The lecturer states his chief object to be to point out to the students for the last time previous to his quitting the chair of natural philosophy the soundness of the principles on which their training is conducted, and to stimulate and encourage them to avail themselves honestly and earnestly of the advantages offered them. In course of his lecture the professor thus refers to the mutual relationship of engineer and contractor:—"The great demand for the formation of extensive works has of late years called into existence a large and intelligent body of contractors, who stand between the designer and the artist, who carry out the plans of the former by the labour of the latter, and who thus occupy a position midway between the intellect which conceives and the hands which execute. As the interpreter of the gods of Olympus was a deity himself, and at the same time most eloquent in the language of men, so must the contractor be a man of superior intelligence, and at the same time intimately acquainted with the details of the mechanical crafts, essential for the execution of the plans which he is commissioned to carry into effect. Without the intervention of such a class the operations of the engineer would be greatly limited, and his facilities of cultivating the higher branches of his art greatly diminished. While, at the same time, the increasing intelligence and skill of the contractor compels the engineer, as Mr. R. Stephenson lately remarked, to exert himself to the utmost to hold that position in his profession which he is entitled to claim, otherwise he must 'perish by this people which he made.' And the only way by which he can retain this position is by deepening and widening his knowledge of the principles of his profession, and extending their applications."

Cholera in Gateshead.—Under the title of "The Three Warnings, or Facts and Figures of the Cholera Epidemics of Gateshead," Mr. James Clephan, the able and active editor of the *Gateshead Observer*, has published a tract containing a complete digest of all the statistics and history of three several occurrences of the modern plague at Gateshead, forming a very instructive contribution to its general history, obtained by personal inquiry and observation aided by public and private records. The one great and useful conclusion to which the whole inquiry leads, according to Mr. Clephan, is that "cholera would never be epidemic amongst us were our habitations not impure." It was amongst the humbler classes mainly, who had least in their power, and lived in the worst parts of the borough as regards cleanliness and drainage, that the epidemic most prevailed; so that the majority of heads of families taken away must have been precisely those who would leave their widows and children a retributive burden on the ratepayers who *had* most in their power, but did not exercise that power towards the general behoof. "Of the 433 persons who died, chiefly in September and October, 1853, the great bulk were so obscure in station as not to be members of families contributing directly to the relief of the poor. The number of direct ratepayers in Gateshead is 1,930. The number that died of the epidemic was but 10. If we assume the number of each family to be 5, this (multiplying thereby the 1,930) will give a total of 9,650. The number of persons that died, direct ratepayers and members of families of direct ratepayers, was but 29. The rateable value of the property of all Gateshead is 54,182*l.* The rateable value of the property occupied by the families of the 29 does not amount to 400*l.* Several, too, of the 29 dwelt in the worst-conditioned localities of the town." Doubtless, it must be a selfish consolation to ratepayers to know that, on the whole, they are personally safer than their poorer brethren, but even apart from all Christian feeling of either duty or benevolence, would it not be an additional consolation if ratepayers, everywhere else as well as in Gateshead, would, by once for all incurring the cost of thorough drainage and other cleansing arrangements in their respective towns, pocket the large balance in their favour thereby perennially arising from a diminution of the poor-rates?

Messrs. John Weeks and Co. of Chelsea, Builders.—Although against our general rule in such matters, we are induced from personal knowledge of Messrs. Weeks and Co. as respectable horticultural builders and hot water apparatus manufacturers, to comply with their request, and state that these gentlemen, who have been for thirty years in the business, have no connection, other than that of partial family relationship, with the Messrs. Edward and Alfred Weeks, also of Chelsea, and engaged in a similar business, carried on for the last eighteen months, who have lately become bankrupts.

Lodging-House at Blandford.—A lodging-house for single men has been erected at Blandford St. Mary, by Sir John J. Smith, of the Down House, to accommodate nine men. The building consists of superintendent's apartments, with common living-room and pantry, hatches for the men, and general kitchen on the ground-floor. The dormitory on the one-pair floor is divided into five single and two double compartments,—one being devoted to cases of indisposition: a washing-room is formed over the porch. The style presents elevations of the Old English character in red brick, with ornamental brick cornices, covered with one hipped roof over the whole in plain tiles. There is an open porch in the centre of front, of oak, with curved brackets supporting the washing-room overhanging in ornamented half-timbered work of oak and plaster with gable roof. Mr. W. Milford Teulon was the architect, and the work was executed by Mr. Augustine Green, at a cost of 420*l.*

Telegraphic Progress.—The British Telegraph Company have made arrangements with the Submarine and European Telegraph Companies, by which they are enabled to afford a continuous communication between London and their various stations. Simultaneously with this arrangement, a considerable reduction has been made in the tariff of charges. For instance, the charge for distances exceeding 100 miles has been reduced, in most cases, from 5*s.* to 2*s.* 6*d.* or one-half. For places under thirty miles, the charge is only 1*s.* No charge is made for the addresses of messages, or for porterage, if within a mile. The company's system of wires extends from Dover and Deal to Glasgow, and as the submarine cable from Scotland to Ireland (*vid* Portpatrick and Donaghadee) is already laid, Belfast and Dublin will ere long be included. The company's wires will also in a short time be carried on to Edinburgh, Greenock, Sunderland, and other important towns. They can transmit messages without any break or change for a distance of 380 miles. The wires of the Submarine and European Companies are extended to nearly all the principal towns in France, Belgium, Denmark, Germany, and Italy, and with these our own principal towns may now be said to be connected in one continuous and unbroken line of telegraphic communication.

Map of the Seat of War.—Mr. Wyld, of Charing-cross, the Queen's geographer, has just published a military sketch of the country between the Danube and Constantinople, compiled by the King of Prussia's general staff, and, therefore, as well as from its publication by Mr. Wyld, likely to prove correct. Appended are maps, on an enlarged scale, of the Bosphorus, the Dardanelles, and various other points of special interest in the present contest.

The Tyne Piers and Harbours of Refuge.—The foundation stone of these great works, at the mouth of the river Tyne, was laid last week with much ceremony by the chairman of the Tyne Commissioners, in presence of an imposing procession of corporations, commissioners, Trinity-house brethren, pilots, &c. According to the plan laid down by Mr. Walker, the engineer appointed by the Admiralty at the request of the Tyne commissioners, the north pier is to run from the rocks under Tynemouth Castle, nearly south-eastward 700 yards. The foundation up to near low water, and the core or heartening, except at the head, is to be deposited from barges or waggons, and the facing from low water upwards paved or walled at a slope or angle. The extreme height of this pier is to be 24 feet above high water. Below this there is to be an esplanade, 12 feet wide, which may be so made as to afford shelter, in recesses underneath it, from the spray in storms; and 10 feet under the esplanade a quay, 18 feet wide and 10 feet above high water. The south pier Mr. Walker proposes to run from the shore opposite the workhouse E.N. eastward 1,400 yards, and to be of somewhat similar construction to the north pier, but on the average of less width and height, decreasing gradually from the head towards the shore. Both piers are to be of stone; the hearting being rubble of all sizes; the facing of large stone, laid in concrete or cement or mortar, where these can be used with effect; for the heads, copings, and other principal facings, well squared durable stone. The Admiralty, who calculate that all the improvements contemplated will cost a sum of 600,000*l.* which is to be raised or repaid by a tax on shipping, have assented to the construction of the north pier on the section of Mr. Walker, to the extent of 1,400 feet from the shore, and to the laying down of so much of the core of the south pier as shall constitute a rubble stone dyke, reaching to not more than 6 feet above high water mark, and to an extent not exceeding 2,800 feet from the shore; and "when the Tyne Commissioners relieve the Admiralty of the difficulty and responsibility of assenting to works without sufficient estimates and funds," their lordships state that they will assent to the extension of the works. The chief stones of both piers have therefore been laid.

THE CARLISLE DRAINAGE. — The opposition to the appointment of a special inspector to look after the drainage contractors, has met with the success it merited: the question has been discussed in the city council, and the appointment confirmed by a majority of 19 against 11. The opposition was led on by a Mr. Cannel, who ought to have been a shining light on the other side of the question, but it appears that the real stumbling-block was the sewerage itself, and not the mere appointment of an inspector. Of course where objection was taken to the sewerage, it was under pretence of being an objection to the specific plan laid down, but whatever the plan might have been, it would in such a case have been the wrong one. Indeed, it *was* the wrong one that objection was taken to. The skeleton plan showing the main branches merely, we believe, was mistaken for the whole scheme in all its details, and a complete "mare's nest," as the local *Journal* remarks, was made out of it. Carlisle appears to have great need that something should be done, as by drainage, for the improvement of its health. In a letter, published in the *Journal*, by Mr. R. Elliot, M.D. a member of the city council, and one who of course knows full well the necessity and advantage of thorough drainage to the health of the town, and has accordingly actively withstood the opponents of the measure, we find that while in Brampton and Longtown (village districts near Carlisle,—Longtown, we remember, consisting mainly of one fine wide, open street, running along the turnpike road), the number of deaths in 1841, was only one in fifty-nine, that of Carlisle itself one in thirty-nine: those deaths arising from epidemics such as typhus, &c. amounted in Carlisle to one in 187, in Brampton and Longtown to one in 368 only: in Carlisle the average age at death was only 28½ years, while it was 39½ in Brampton and Longtown. Through preventible diseases, therefore, 297 lives (now many more) have been needlessly lost every year in Carlisle, and nearly six years cut off from the lives of those who remained. In sickness, funerals, and labour, as Dr. Elliot observes, the money thus lost amounts to twice as much even for one year alone as the estimated cost of the intended drainage altogether.

LOCAL MUSEUMS OF ART.—The Lords of the Committee of Council for Trade are desirous that local schools of art should derive all possible advantages from the Central Museum of Ornamental Art, and with this view have directed that collections should be made of articles from each of the divisions of the Central Museum, namely—glass, lace, metals, ivory carvings, &c. pottery, paper-hangings, and woven fabrics; and that they should be sent in rotation to local schools making due application, and expressing their willingness to conform to conditions, as to adequate provision for exhibiting the collections both in the daytime and the evening. Students of the schools are to be admitted free; and, to enable artizans and others employed in the daytime to share in the benefits to be derived from the collection, the fee on three evenings in the week is not to exceed one penny each person.

DRAINAGE OF BRADFORD.—The borough surveyor of Bradford has presented his report to the Street and Drainage Committee on his proposed plan for a main trunk sewer for the town, which stands greatly in need of an efficient system of drainage, the subsoil being completely saturated with sewage matter, partly owing to the present sewers being constructed of rubble wallstone without lime, partly to many of these sewers being without outfalls; and, lastly, to the vicious plan frequently adopted of constructing the sewers so as to take advantage of numerous fissures in the rock formation, to allow the sewage water to escape through or rather into them. The surveyor's estimate of the cost of constructing the proposed sewer, amounts to the sum of 13,019*l.* 1s. 7d.; and a rate of something under one penny in the pound will suffice, with interest at 5 per cent. to pay off the cost in thirty years.

RAILWAY SIGNALS.—Mr. Bernard Cowran, of 164, Fenchurch-street, has patented an apparatus for communicating signals by sound to the driver of a coming or following train, in cases where a train on a railway is stopped from any cause. For this purpose bells or sounding instruments are placed at suitable distances, say half a mile apart, on a railway, and wires or connections and pulls applied in such manner that in case of a train stopping by the breakage of any part of the locomotive or otherwise, the guard or other person may readily be able to pull and put in action the bell or sounding apparatus, and thus give notice by sound at stations and intermediate places behind and before the disabled train.

THE QUEEN AND THE KILMARNOCK WATER COMPANY.—It is stated in a local paper, the *Kilmarnock Journal*, that her Majesty has recently become a *bonâ fidè* shareholder in this company, to the extent of thirty shares, and that an official letter as to the dividends was lately received by the directors.

ARCHÆOLOGICAL INSTITUTE.—The introductory meeting at Cambridge will be held Tuesday, July 4, at the Town-hall, in the Market-place, at half-past eight. July 5. Meetings of sections at ten, in the Public Schools. Professor Willis will give observations on certain ecclesiastical and collegiate buildings in the University, and will point out their architectural peculiarities. Evening meeting at the Town-hall. July 6. Meetings of sections at the Public Schools. Short excursions in the neighbourhood of Cambridge. Evening meeting at nine. July. 7. Excursion to Bury St. Edmund's, by invitation of Lord Arthur Hervey and the Suffolk Archæological Institute. The members of the two societies will dine together in the Town-hall. July 8. Meetings of sections. Excursion to Audley End, by invitation of Lord Braybrooke; the Hon. Richard Neville's Museum of British, Roman, and Anglo-Saxon Antiquities. July 10. Meetings of sections at ten. Excursion to Ely Cathedral, and evening meeting. July 11. Annual meeting of members, and meeting for reading memoirs. The Temporary Museum will be formed in the Lecture-rooms at Trinity College.

THE SMOKE NUISANCES ACT.—In the House of Lords the other night, Lord Redesdale asked the First Lord of the Treasury when the Secretary of State for the Home Department proposed to issue orders and directions to the Commissioners of Police for the metropolitan district, and to the Commissioners of Police for the City of London and the liberties thereof, in accordance with the provisions of an Act passed in the last session of Parliament to abate the nuisance arising from the smoke of furnaces in the metropolis, and from steam-vessels above London-bridge, in order that informations might be laid against all persons who should not, from and after the 1st day of August next, comply with the requirements of the said Act?—Lord Aberdeen said, the number of furnaces returned by the Police Commissioners, to which the Act was applicable, was 8,802. The commissioners were now occupied in printing notices to be served on the owners of them, and he had no doubt that on the 1st of August, when the Act came into operation, steps would be taken to enforce it.—The Marquis of Lansdowne was convinced that the whole power which was vested in the Secretary of State by the Act of last session would be literally and fully exercised.—The Earl of Shaftesbury observed that the effect of the smoke which was daily vomited forth from these great furnaces was most prejudicial to health as well as cleanliness. He had collected evidence with relation to the question from all parts of the country, and the invariable testimony was, that the consumption of smoke might be accomplished at a very slight expense, and with a saving of fuel to the extent of 10, 20, and sometimes as much as 25 per cent. If the Act were strictly enforced, the proprietors of furnaces would soon find out that in doing their duty they conferred a benefit not only on the community at large, but also upon themselves.

GALLERY FOR PHOTOGRAPHY.—Mr. Claudet's daguerreotype gallery, in Regent-street, built under the direction of Messrs. Banks and Barry, has been decorated by Mr. Hervieu, with paintings illustrating the history of photography and stereoscopy. The room, 31 feet long, 18 wide, and 18 high, is lighted by a skylight 24½ feet long, and 11½ wide, composed of thirty-two octagonal compartments, glazed with ornamented glass. The architecture is Anglo-Italian, and there is a screen and balcony. In the cove under the skylight are portraits of Porta, who invented the camera obscura, Daguerre, Talbot, and Wheatstone; Herschel, Newton, and Brewster; Davy, Leonardo da Vinci, J. N. Niepce, and T. Wedgewood; Fizeau, Arago, and Niepce de St. Victor. Photography was invented simultaneously, in the year 1839, in France by Daguerre and Niepce, and in England by Talbot. In France a law was passed to remunerate Daguerre and Niepce by the grant of a pension. That law was signed by Louis Philippe, the reigning sovereign. This fact is illustrated in the panel on the left of the south side, representing the Chamber of Deputies, with a view of the Seine and one of its bridges. In England the inventors of photography and stereoscopy have had the honour of communicating their remarkable discoveries to the world through the Royal Society. This is illustrated on the left of the north side in a panel giving a view of London, with the Thames and one of its bridges. The most conspicuous part of the picture is Somerset House, the seat of the Royal Society. A genius, holding the inscription "Royal Society," has near him two scrolls of paper, one with the name of Talbot, and the other with the name of Wheatstone, containing their discoveries. As a whole the work is entitled to commendation.

ENCOURAGING TO GENIUS.—The inventor of the screw-propeller is said to have declared his regret that he ever thought of it; the harassing labour of effecting its introduction into practical use having wearied and exhausted his bodily and mental resources.

FERRO-VITREOUS "PORCELAIN."—A new species of domestic ware, to which we have before alluded, as a lasting substitute for porcelain, glassware, and earthenware, as well as for cooking utensils, and other purposes, consisting of glass on an iron basis, seems now to have been considerably improved, under Paris's patent, so as not only to obviate the objectionable use of arsenic in the preparation of its opaque colours, but also to exhibit a variety of colours in the glass or enamel, or even the clear glass and metal alone. The utensils it seems will stand any amount of heat, as well as of hard usage, so that tumblers may really now be tumblers without much detriment. The ware is said to be now both light and elegant in appearance, as well as cleanly in use. The ancient "secret" of "malleable glass" would appear to be scarce worth knowing now, with such an invention, except for windows and such like purposes. Even gas tubing, it is said, is being made of the ferro-vitreous material; and it is regarded as particularly useful as a substitute for all sorts of domestic crockery and glass ware at sea.

GLASS is extensively used: its power seems mighty in such structures as the Crystal Palace of Hyde-park and the new Crystal Palace of Sydenham; yet glass is subservient to so light a thing as air, whose aid causes it to yield music truly enchanting, though not yet heard, in the ornamental gardens of royalty, nobility, and gentry, the suburbs of cities, and elsewhere. Innocent pleasures are communicated through the senses, and augmented by the adoption of a work of art and manufacture mentioned in Mr. Hill's "Travels in Siberia," vol. i. p. 277, for there he states: "But the most characteristic objects of the grounds, and those which give them chiefly the air and style of China, are two perfect pagodas, one of which stands at each of the outer angles of the grounds. From the pointed corners of the two-fold or three-fold roofs of these hang *glass bells*, which are light enough to be moved by the least motion of the air, which they fill with Æolian sounds.—U.

TENDERS

For St. Matthew's new church, now being erected at Smethwick, near Birmingham; Mr. Joseph James, architect. Quantities supplied by Mr. Hornblower:—

Cunningham	£3,136	0	0
Hardwick and Son	2,395	0	0
Bashby	2,380	0	0
Briggs (accepted)	2,260	0	0

For a house in Queen-square, Bloomsbury, for Mr. D. Cronin. Messrs. Habershon, architects:—

Lawrence and Sons	£3,199	0	0
Pollock and McLellan	3,187	0	0
Locke and Nesham	3,178	0	0
Haynes and Eyre	3,060	0	0
Rudkin	3,028	0	0
Cooper	2,976	0	0
Rowland and Evans	2,940	0	0
Tolley	2,785	0	0

For two houses at Bermondsey. Mr. Legg, architect. Quantities supplied by Mr. Northcroft:—

Rutter	£2,100	0	0
Kent	2,090	0	0
Searle	2,050	0	0
Tarant	2,010	0	0
Willson	1,994	0	0
Hall	1,895	0	0
Hayne	1,826	0	0
Newbey (accepted)	1,800	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and *not* to the Publisher.

ADVERTISEMENTS.

MR. FREDERICK INDERMAUR will SELL by AUCTION, on the PREMISES, White Lion Wharf, Bankside, on TUESDAY next, the Salvage of the late fire of Seven Houses, comprising about 300,000 capital BRICKS, plain and coutines, stout floor boards, joist and girders, stoves, rafters, sashes, and frames, 4 and 6-panel doors, and sundry other articles.—May be viewed and catalogues had; and of the Auctioneer, 71, Union-street, Borough.

Freehold Building Plots, on Surbiton-hill, Kingston, terracing the railway embankment, with extensive views, salubrious air, adequately timbered, with a wide carriage-road and footpath, just retired from the turnpike-road to Epsom, and a few minutes' walk from the railway station.

MR. JOHN DAWSON will SELL, at the MART, on WEDNESDAY, 12th JULY, at TWELVE, an important parcel of BUILDING GROUND, forming a terrace of many hundreds of feet, which will be divided into lots of about 20 feet frontage to each.—Particulars, with plans, may shortly be had at the Mart; and at Mr. JOHN DAWSON'S Auction and Land Offices, Kingston, and Marlborough-chambers, 49, Pall-mall.

TO BUILDERS, CARPENTERS, CONTRACTORS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, Acorn Wharf, Canal bridge Old Kent-road, on MONDAY, JULY 3rd, at TWELVE o'clock, the valuable, dry, and well-selected STOCK, consisting of about 2,300 pieces of foreign timber, 4,500 yellow and white deals, 6,000 yellow and white battens, 2,300 yellow and white wood, and useful stuff.—May be viewed the Friday and Saturday prior to and morning of sale, and catalogues obtained on the Premises; and at Mr MARSH'S Offices, 2, Charlotte-row, Mansion-house, London; or will be forwarded on application.

PADDINGTON.—To Builders, Carpenters, Building Material Dealers, and Others Carcasses and Builder's Stock and Materials for unprepared sale.

MR. MARSH has received instructions from the Trustee of Mr William Dodd Bond to SELL by AUCTION, on the PREMISES, Westbourne-park, near the Royal Oak, Paddington, on TUESDAY, JULY 4th, 1854, at TWELVE o'clock, BUILDING MATERIALS; consisting of Dantzic fir and pine timber, a large assortment of good dry prepared floorboards, planks, deals, and battens, framing joists, scaffold-boards, poles and ropes, pulleys, ladders, York paving, bricks, 2 tons of plaster and hair, nails, about 4 tons of sheet lead, various and miscellaneous effects.

Also, on the same day, at TWO o'clock punctually, will be SOLD, in Four Lots, without reserve, THREE substantial Brick-built FIRST-CLASS RESIDENCES in CARCASS, each planned for fifteen rooms, and a plot of ground with two houses in the course of erection, and the foundations laid for another Leases will be granted direct from the freeholder, for long terms, at very low ground-rents. May be viewed, and particulars and catalogues obtained on the premises; of Messrs. FRY and SON, 3, Irongate Wharf, Paddington; at the Royal Oak, Paddington; at Mr. OSMAN'S Offices, Durham-terrace; of Messrs POWELL and THOMPSON, Solicitors, Raymond's-buildings, Gray's-inn; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

The Plant and Machinery of a Patent Manure Manufacturer and Bone Crusher, Gravesend, Kent.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, Denton-wharf, Gravesend, on WEDNESDAY, JULY 5, at TWELVE o'clock, in suitable lots, the valuable PLANT, MACHINERY, TOOLS, and EFFECTS, including a chimney-shaft 45 feet high, strong wrought-iron high pressure cylindrical boiler, a 4-horse high pressure steam engine, a wrought-iron high pressure grease extractor, a 50-gallon wrought-iron water tank, a 9-inch deep well pump, worked by engine, two wrought-iron shafts, a pair of stone edge runners, a one pair roller bone-crushing mill, Crosskill's bone grinding bone-mill, a sifting cylinder, a circular saw bench, a 2,0 gallon iron copper, pumps, crystallizing pans, reverberatory furnace, weighing machines, sieves, measures, barrows, and numerous useful tools. The fittings of the laboratory include a chemical furnace, evaporating dishes, test glasses and turnbuse, &c. Also a few lots of Household Furniture, and miscellaneous items.—May be viewed the day prior and morning of sale, and catalogues obtained of Mr. WATKINS, on the premises; at the Principal Inns at Gravesend; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

Freehold Building Land, Charterhouse-square.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, JULY 6, a very valuable plot of BUILDING GROUND, possessing a frontage of about 16 feet by 60 feet, occupying the site of No. 16, Charterhouse-lane, most advantageously situate close to Charterhouse-square, and presenting a rare opportunity seldom to be met with in this locality, either for the erection of ground-rents, or a building speculation of a lucrative character.—May be viewed, and particulars with conditions of sale obtained of FRANCIS PAXON, Esq. Solicitor, 3, New Sq.are, Lincoln's-inn; Carey-street; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion house.

WALTHAMSTOW ESSEX.—Valuable Freehold Estates, comprising two mansions, a residence, and 103 acres of principally meadow land eligible for building purposes, and producing a present rental of 403. per annum

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the Trustees to SELL, at GARRAWAY'S, on WEDNESDAY, the 19th day of JULY, at TWELVE o'clock (unless previously disposed of by private contract), very valuable FREEHOLD ESTATES, situate in Clay-street, Walthamstow, comprising a capital mansion, with stabling, gardens, orchard, and 8a. 1r. of meadow land, let to Mr. Morris for one year, at the nominal rent of 10l.; a detached residence, with stable, garden, and 10 acres of meadow land, let to Mr. Bryant at 40l. per annum; a residence, with barn, homestead, stabling, and 1a. 1r. 4p. of meadow land, let to Mr. J. H. Fox at 12l. per annum; several enclosures of meadow and arable land, containing about 30 acres, with extensive frontages, and lately let at 122l. 5s. per annum; and an enclosure of meadow land, containing 2a. 3r. 37p. let to Mr. Dobree at 8l. per annum, the whole affording a most eligible opportunity for a building speculation on an extensive scale.—Particulars and plans are preparing, and when ready, may be had at the inns at Walthamstow, Enfield, and Stratford; of Messrs. MALTBY, HOMPSON, and JACKSON, Solicitors, Bank-buildings; at GARRAWAY'S; and of Messrs. FAREBROTHER, CLARK, and LYE, 5, 6, Lancaster-place, Strand.

Very important Freehold Building Land, being part of the Kilburn-park Estate, adjoining the Paddington Estate.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions to SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, JULY 12 at TWELVE, in numerous lots, about 15 acres of very valuable FREEHOLD LAND, land-tax redeemed, situate at Kilburn, being part of the Kilburn-park Estate, highly eligible for building purposes, adjoining the Paddington Estate, and lying midway between the Edgware and Harrow roads, partly abutting upon Kilburn lane, and close to the Kilburn-station of the North-Western Railway. The estate will be divided into numerous lots, with frontages to the new streets or roads about to be called Park, Cambridge, Percy, Malvern, Carlton, Peel, and other roads, and to terrace, in the parish of Willesden.—Particulars and plans are preparing, and may shortly be had of THOMAS BRACE, Esq. Solicitor, Chandos-street, Cavendish-square; at the Red Lion, Kilburn; at Garraway's; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

MAIDENHEAD, BERKSHIRE. Valuable Freehold Building Land, near the station, divided into numerous lots for small capitalists.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions to SELL by AUCTION, at the ORKNEY ARMS HOTEL, adjoining Maidenhead-bridge, on SATURDAY, JULY 1, at TWO, a valuable FREEHOLD ESTATE, comprising the enclosure of pasture land called Oak Close, containing about five acres, being the second field from the Maidenhead Station, in the direction of Maidenhead, having extensive frontage to the high road, which will be divided into numerous lots for the convenience of small capitalists. May be viewed, and particulars had at the place of sale; of Messrs. SAMPHELL and WITTY, Essex-street, Strand; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

Building hill.—Very valuable Plot of Building Land on the Ladbroke Estate, being the only uncovered spot in this improved locality, a portion of the estates of the late William Chadwick, Esq.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions from the administrator to SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, JULY 5, at TWELVE, in one lot, a very valuable and important PLOT of BUILDING LAND, having a frontage of 375 feet to Kensington-park-road, and 186 feet to Ladbroke-road, formerly Ladbroke-terrace east. Nothing-hill, highly eligible for the erection of villas and attached residences, being within a few yards of the new road to Uxbridge and Lord Holland's park, and the only uncovered piece of land in the vicinity. Separate leases may be had, if required by the purchaser, direct from the freeholder, for the term of eighty-two years at nominal ground rents.—May be viewed, and particulars had of J. ANDERSON ROSE, Esq. Solicitor, 7, Salisbury-street, Strand; at Garraway's; and of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

PENGE AND SYDENHAM, KENT, in the immediate vicinity of the Crystal Palace. Very important Freehold Building Land, containing about 19 acres, in hand, and of which possession will be given.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, JULY 5, at TWELVE o'clock, in one or numerous lots, by direction of the Trustees of the late John Laurie, Esq. a very important and valuable FREEHOLD ESTATE, situate adjoining to the village of Penge, in the immediate vicinity of the Crystal Palace, fronting the high road, and at the junction of the Brighton and South Coast and Croydon Railways, with the Branch Railway to the Palace, and midway between the Anerley and Sydenham stations. The whole estate contains above 19 acres, and presents one of the most eligible sites for the erection of first-class residences, for so much sought after in this rapidly rising neighbourhood. The property is only separated from the Palace and grounds by the railroad, and it commands uninterrupted views over the whole, together with the lovely and picturesque scenery in the neighbourhood. The property forms the remaining portion of Sydenham-park, which Messrs. FAREBROTHER, CLARK, and LYE sold to the Crystal Palace Company last year. The estate is in hand; immediate possession will be given.—May be viewed, and particulars, with plans, had at the inns in the neighbourhood; of A. DOBIE, Esq. Solicitor, 2, Lancaster-place, Strand; at GARRAWAY'S; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, 6, Lancaster-place, Strand.

TO BUILDERS, TIMBER-MERCHANTS, AND OTHERS.

A CLERK, experienced in Book-keeping, Builders' accounts, prices of materials, measurement of work, &c. desires a RE-ENGAGEMENT. No objection to afford temporary assistance. -Address X. Y. Z. 12, Charlwood-place, Belgrave road, Pimlico.

A DRAUGHTSMAN and SURVEYOR, efficient, and of respectable habits, is just open to an ENGAGEMENT, in town or country. Terms, two guineas per week. No objection to go abroad. -Address prepaid, S. E. Office of "The Builder."

He is well acquainted with the continent, and speaks French. A moderate salary required.—Address, post-paid, to N. H. C. 11, Robert-street, Chelsea.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating: so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stucceed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ... }

TO ARCHITECTS AND SURVEYORS.

AS IMPROVER.—A young Gentleman, having served in an Architect's Office more than three years, is desirous of IMPROVING HIMSELF in an ARCHITECT'S OFFICE, where, in consideration of his services, he would have the advantage of perfecting h mself in the professi n N objection to bind himself for a period. No salary required at first, and then only nominally. Address, prepaid, stating advantages, to R. S. O. Office of "The Builder."

SURVEYOR WANTED.—The Local Board of Health for the District of Merthyr Tydfil are prepared to receive APPLICATIONS from CANDIDATES for the OFFICE of SURVEYOR for the above district. He must be competent to prepare plans, drawings, estimates, and specifications of all works connected with the sewerage, paving making and repairing of the streets, as well as surface, and to superintend the execution thereof, to the materials, and see to the fulfilment of the conditions of the contracts for executing such works. He will also be required to report upon all new buildings within the district as to their drainage levels and other conveniences, and also upon cases of nuisance, involving structural alteration for abating the same, and generally possess a thorough knowledge of all the duties required by the Public Health Act 1858. The whole of his time must be devoted to the services of the board. Persons desirous of undertaking the duties of such appointment are requested to send in their applications and testimonials, stating the amount of salary required, addressed to me, endorsed "Application for Surveyor," on or before the 1st day of JULY next. The board do not engage to accept the lowest or any offer. By order,

JAMES W. RUSSELL, Clerk.

Merthyr Tydfil, June 20, 1854.

FOREIGN SHEET-GLASS packed in cases of 200 feet, from 38s. to 42s. per case.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

DGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot. Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

ENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Not being trans-parent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the nservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

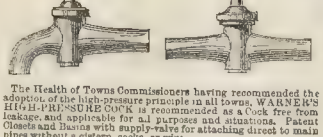
M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.



Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO CONTRACTORS.
PATENT PORTABLE PUMPING ENGINES, mounted on strong wagon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALL'S, Engineers and Portable Engine Makers, 29, Blackfriars-road. These engines have been successfully employed for years.

STEAM BOILERS of every description, Wrought-Iron Girder Bridges, Gas-holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Twidale-near Dudley London Office, 73, Hatton-garden.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PURE GAS.—TO GAS COMPANIES, ENGINEERS, MANUFACTURERS, and OTHERS.
PATENT CLAY PURIFICATION.—No cheap process has yet been discovered for freeing gas from ammonia and the removal of the bi-sulphuret of carbon (the monster nuisance of gas-burning) has been given up in despair. Clay removes both these impurities, and when taken from the purifiers the bi-sulphuret of carbon is visible, completely blackening the clay. The light of the gas is increased in proportion to its thorough purification. The proprietors of this patent are now ready to grant licenses for its use—Terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITTAKER, Agent to the Patentees, Gas Works, Wakefield.

VENTILATION.
D. and E. BAILEY beg to call the attention of Architects and others to their improved
CIRCULAR ARNOTT VENTILATORS,

which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.

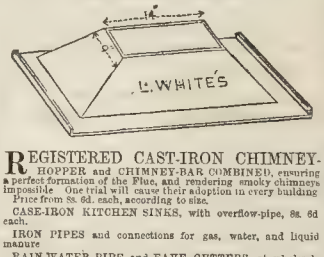
Price, bronzed, from 6s. 6d.

D. and E. BAILEY,
27A, Holborn.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an



EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 195, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.

CASE-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPES and EAVE GUTTERS, at wholesale prices. Also, O.G. Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS, with caps and bases and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS.—This patent has received the unqualified approbation of some of the most eminent engineers of the day, as the most effective, economical and perfect joint in use at the present time. The simplicity of its construction is such as will allow of its application to any line of railway, without causing the slightest hindrance to the ordinary traffic during the time that it is being laid down. The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and wherever adopted must very considerably decrease working expenses. To railway companies, having old and bad roads, the principle is peculiarly advantageous, as its application will not only restore the road to a perfectly safe and serviceable state for many years, but, at the same time, bring into efficient use all the old and broken chairs. To the railway world in general, it is of the greatest value, as it admits of the easiest locomotion, and is most simple and economical in principle. Every information will be given, and models forwarded for inspection, on application to the Manager, at the Offices of the Company, Wolverhampton.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1854

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 9d. per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

PAPER-HANGINGS.—The CH
HOUSE in London for every description

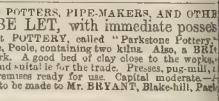
JOHN WARNER and SONS, Pate
IMPROVEMENTS in the MANUFACTURE
BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

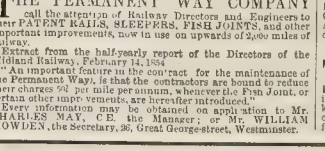


Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, a superior tone and facility for ringing.



BOROUGH STEAM WHEEL-W

29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

hese Ball-valves can be recommended with the greatest confidence as the most powerful and easy action alve ever offered to the public. They are entirely free from all those objections of fittings such as spin- slides, and cylinder fittings, so fatal to B.ll-valves generally. They are perfectly quiet in action, and ot by any means stick fast, there being no point of friction from fittings in their construction. They are anged as to accumulate the power of closing against the column of water when most required, and are nted to stand any known pressure of water.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

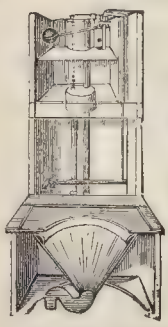
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



rior Glazed Stoneware Pipes, Bends, ons, Traps, &c. Hopper and other Pans, st White Glaze inside.

n Pan, with or without STEPHEN REEN'S Patent Air-tight Valve.

red Flushing Basin,—the most effective phon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

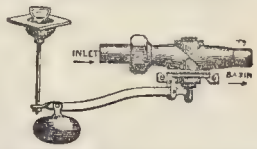
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

HAYES, BROUGH, and CO.



Works: Llwynenion, near Wrexham.
Offices: 13, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

BOURNE VALLEY POTTERY,

NEAR POOLE, DORSET.

Manufactory of Salt Glazed Stoneware, Pipes, Bends, Junctions, &c. from clay of the finest quality (the produce of the estate on which the goods are manufactured), all inferior clay being at once rejected.

MILL WALL POTTERY (near Scott

Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 50, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

REDUCTION of PRICE in UNGLAZED

DRAIN PIPES.

Manufactured by CHAS. FRANCIS and SONS, NINE ELMS.

The price in future will be,

6s. 3d. per foot for the 3 inch bore.		
6s. 3d.	"	4 "
9s. 3d.	"	6 "
9s. 8d	"	9 "
12s. 2d.	"	12 "
28s. 3d.	"	15 "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.
Agent for Southampton, R. L. FLUDER, American Wharf.

SALES BY AUCTION.

WALDEN and ASHDON, ESSEX—TO BE SOLD BY AUCTION, by

MESSRS. NOCKOLDS and KING, upon the PREMISES, on TUESDAY, the 27th day of JUNE, 1854, at 10 for 11 o'clock, 1,000 OAK TIMBER TREES, 100 and ASH and ELM do., also a quantity of Ash Sec nds and Oak Saplings, in lots to suit purchasers.

The above, similar in nos 2 ng to Pennye, Great Hales, and the also, similar in nos 2 ng to Pennye, Great Hales, and the Grimsmoor Woods, will come to land roads. Many of the trees are straight and of dimensions long lengths, and excellent quality, and well worthy the attention of builders, and others. Six months' credit will be given subject to the usual conditions.—May be viewed by application to JOHN BARKER, the wo lward, of whom catalogues may be had, also at the inns in the neighbourhood.—Sale to commence in Great Hales Wood, a short distance from Ashdon, at 10 o'clock.

WITHOUT RESERVE. Freehold Building Land at Carshalton, Surrey.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on THURSDAY, JUNE 29th, at TWELVE, in eight lots, without the least re erve, upwards of 100 feet FRONTAGE to a good road, by 160 feet deep, beautifully situate near the Carshalton station on the London and Epsom Railway, about 11 miles from London.—Printed particulars may be had of Mr. SHARLAND, 38, King street, Cheapside; at the Mart; and of Messrs. H. BROWN and T. A. ROBERTS, 22, Throgmorton-street.

TO ENGINEERS, MACHINISTS, COPPERSMITHS, IRON FOUNDERS, SMITHS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, at the FARM, adjoining Craven Lodge, Stamford-hill, about three miles from Bishopsgate street, on the banks of the River Lea, but a very short distance from the Tottenham Station of the Eastern Counties Railway, and at the Wharf, Bailey's-lane, on the Eastern Counties Railway, and at the Wharf, Bailey's-lane, on MONDAY, JULY 3rd, and following days at ELEVEN o'clock each day, by direction of the executors of Arthur Craven, Esq. deceased, in 1,118 lots, without reserve, valuable MACHINERY, TOOLS, and STOCK, a twelve horse power condensing steam-engine, by Easton and Amos, pair of high-pressure marine engines equal to 24-horse power, cylinders, cylinder fitted complete, and 6-inch stroke, powerful self-acting shaping and drilling machines, powerful self-acting shaping and drilling machine, by Branah and Robinson; self-acting planing machine, one circular revolving disc for producing powerful screw-cutting surfaces, large, boring, and turning lathes (three self-acting; a lughis finished amateur's lathe, by Holtzapffell, with chucks; three wall drilling machines, the very powerful self-acting boring bars for the largest cylinders, shearing and punching machine, by Parr, Curtis, and Madeley; screw-jacks, overhead cranes, foundry crane, crab and jib cranes, double-action sailing-up machine, two excellent circular saw benches, six-feet wrought and cast iron shafting, 8-in spur, bevel, and pinion wheels, 200 pairs plummer blocks and brasses, hanging carriages, brackets, standards, &c. six hydraulic lifts, hydraulic press with 10-inch ram and pumps, the machinery for making Jones's Patent Wrought-iron Wheels, two pairs of brass calendering rolls, pair 10-inch air-pumps, several grindstones, a hand-turning fly wheel equal to one horse power three tons of steel tools, in lathe tools, drills, rimers, countersinks, &c.; sets of cylinders, shearing and punching machine; a valuable assortment of wood patbright stocks, taps, and dies; a valuable assortment of wood patterns, 25 lots rod and bar iron, cast shear, and blister steel, several tons of bolts and nuts, rivets, nails, &c.; 300 gross washers, 200 gross wood screws, fitting up of smiths' shop, three tons smiths' tools six anvils, mandrils, swages, bending blocks, portable forges, cast-iron benches, 30 wrought-iron vices, screwing-post, capital boiler maker's trestle, 2 tons of cast iron in pipes, elbows, gir ers, columns, wheels, doors and frames, sashes, furnace bars, and useful castings; 30 tons cast-iron tank plates, 20 tons cast-iron flooring plates, 10 tons of Stockton and Moor coke, two welsh-bridges (to weigh ten tons each), two Pooley's weighing-machines, several smaller machines, scales, five tons iron weights, five-ton wharf crane, wrought and cast iron pans and cistern, two cast-iron beaters, lofe-allon brewing copper, copper heater, two copper dome top pans, four large copper cisterns, copper pumps, two tons of copper plates, pipes, and rods; one ton of ironwork in cooks, valves, flanges, unions, &c.; brass lift-pumps, copper measures, funnels, and filling-out bushes; a large assortment of gas-fittings, pipes, bends, elbows, unions, &c.; brewing apparatus, &c. brewing apparatus, &c. 2 excellent drays, 2 timber trucks, 2 trolleys, two wheelbarrows, one timber carriage, one timber crane, one crab, one winch, one crab and winch, one pair of timber shears, one pair of timber sheers, one pair of timber sheers, one pair of timber sheers

Mr. W. Thomas, New Record Repository, Fetter-lane.
Mr. J. J. Smith, 27, Sloane-street, Chelsea.
Mr. C. Edmonds, 1, Stanley-street, Paddington.
Tickets may be had of the Stewards.

It will be as well to remark that the above society is quite unconnected with any trades union.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.
AN EVENING MEETING of ART WORKMEN will be held at the ROOMS of the Museum, on THURSDAY, JULY 6th, from SEVEN to TEN o'clock in the evening.
The Chair will be taken at EIGHT o'clock.
Master Builders, Art Manufacturers, Carvers, Metal-Workers, and others, are requested to encourage the attendance of those Workmen in their employ.
Cards of admission may be had upon application at the Museum from Ten to Four daily, excepting Saturday.
HENRY CLUTTON, Hon Sec.

COMPETITIONS.

TO ARCHITECTS.
PLANS, DESIGNS, and DRAWINGS are required for ALTERATIONS, IMPROVEMENTS, and an additional WING to REEVE'S HOTEL, Weston-Super-Mare: also New Stabling and Seven Dwelling-houses, with Pleasure Grounds contiguous. Each set of drawings is required to be complete in detail for working the building. £25 will be given for the plan approved of.—All particulars may be had on application to the Proprietor, Mr. T. HUGGINS, Hotel, Weston-Super-Mare, Somersetshire

CONTRACTS.

CARLISLE LOCAL BOARD of HEALTH.
SEWERAGE WORKS.—TO CONTRACTORS, BRICKMAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to undertake the following Contract:—
CONTRACT No. 4.—For EXCAVATIONS and the CONSTRUCTION of BRICK SEWERS, CULLIES, MANHOLES, and other Works (including the supply of BRICKS).
The drawings may be examined, and copies of the specification, schedule, bill of quantities, and form of Tender may be obtained, together with any further information required, on application at the Office of the Local Board, Carlisle, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster.
The charge for specification, bill of quantities, &c. will be 5s.
Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 12th day of JULY, endorsed "Tender for Contract No. 4."
ISAAC CARTMELL,
Committee Clerk to the Local Board.
Carlisle, 28th June, 1854.

CONTRACTS.

TO BUILDERS.
SEPARATE Sealed TENDERS for the performance of the following SERVICES, viz:—
SERVICE 1.—Preparing the Perreplein and Ramparts of each and every one of the Seven Bastions at PENDENNIS CASTLE, Cornwall, for the reception of Dwarf Traversing Platforms, in the Salient Angles.
SERVICE 2.—Preparing Foundation, &c. for a Dwarf Traversing Platform; Erecting an Expense Magazine and Traverse; Erecting two Side-arm Sheds and Traverses, at the Half-Moon Battery, Pendennis Castle, Cornwall.
SERVICE 3. Enlarging one Embrasure, Heightening the Merlens, and Forming Banquette; Preparing Foundations, &c. for a Dwarf Traversing Platform; Erecting a Side-arm Shed; Erecting an Expense Magazine and Traverse, at Crab Quay Battery, Pendennis Castle, Cornwall.
SERVICE 4.—Preparing Foundations for Twelve Dwarf Traversing Platforms; Taking Down, Reforming, and Extending the Parapet, Erecting an Expense Magazine and Shell-room; Erecting two Side-arm Sheds, and Forming Steps and Passages and Recesses for Shot Furnaces, at the Barrack-west Battery, Mawes Castle, Cornwall.
FOR SPECIFIC SUMS.
Will be received at the Ordnance Office, Pall-mall, London, on or before the 12th JULY, at Noon, addressed "To the Secretary to the Board of Ordnance," and endorsed "Tender for Work at Pendennis Castle, Cornwall," or "Tender for Work at St. Mawes Castle, Cornwall," on the left hand corner of the envelope.
Detailed specifications of the work to be performed, with the terms and conditions of contract may be seen, and form of Tender and every information obtained at the Royal Engineers' Office, Devonport, between the hours of 10 and FOUR o'clock, from MONDAY, the 3rd, to SATURDAY, the 15th JULY, prox both days inclusive.
Royal Engineers' Office, Devonport, 28th June, 1854

TO BUILDERS AND OTHERS.
MILITIA DEPOT, HUNTINGDON.—Persons desirous of CONTRACTING with the Lieutenancy of the County of Huntingdon for the ERECTION of STORES, ARMOURY, NON COMMISSIONED OFFICERS' QUARTERS, and other works at the proposed Militia Depôt, Huntingdon, may inspect the drawings and specification and obtain all required information, at my office, in Huntingdon, after MONDAY next, JUNE 26th, between the hours of TEN and FIVE. Tenders, sealed and endorsed, "Tenders for Militia Depôt, Huntingdon," are to be sent to Mr. EDWARD MAULE, Clerk to the Lieutenancy, on or before THURSDAY, JULY 6th, 1854. Two sureties will be required for the due performance of the contract. The Lieutenancy reserves the right of rejecting any or all of the Tenders.
Signed ROBERT HUTCHINSON, Architect.
Huntingdon, June 19th, 1854.

BRISTOL LOCAL BOARD of HEALTH.
CLEANSING.—The Committee of the Local Board of Health hereby give Notice, that they are ready to receive TENDERS for SWEEPING and CLEANSING, including WATERING previous to such Sweeping and Cleansing, for the term of three years from the 29th September next, the carriage-ways of all the streets, squares, courts of every description, yards, lanes, passages, and places (exclusive of turnpike roads) within the city and county of Bristol, thrice in each week; and for TAKING AWAY the ASHES, DIRT, &c. to be made by the inhabitants, twice in each week. The Committee have separated the said city and county into four districts, and any person or persons willing to contract for performing the work in all or any of either of the said divisions are requested to deliver sealed Tenders for doing the same on or before TEN o'clock on THURSDAY morning, the 6th day of JULY next, addressed to "The Committee of the Local Board of Health, 13, Prince-street, Bristol," and indorsed "Tender for Cleansing Division No. ." A specification of the works to be tendered for, and the form of Tender and any other information may be obtained either on personal application or by letter addressed to the clerk. Each contractor will be required to find two sufficient securities for the due performance of the contract. The committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender nor until inquiry and approval of the proposed sureties.
By order of the Committee,
JAMES HARRIS, Clerk.
Offices, 13, Prince-street, 19th May, 1854.

LONDON and NORTH-WESTERN RAILWAY.—CONTRACTORS and BUILDERS.—The Directors of the London and North-Western Railway Company are desirous of receiving TENDERS for the EXECUTION of ADDITIONAL WORKS at CAMDEN STATION. Parties desirous of Tendering are requested to attend at the Engineer's office, Euston Station, at TWELVE o'clock on MONDAY, JULY 3, to appoint a person to take out the quantities on their behalf; and the drawings and specifications may be seen on the same day. Tenders, addressed to the Secretary, at this Office, to be sent in on or before MONDAY, JULY 10, at TEN o'clock.
By Order, CHAS. E. STEWART, Secretary.
Euston Station, 27th June, 1854.

THE CONSERVATIVE LAND SOCIETY.
TRUSTEES.
Viscount Raneleigh.
Right Hon. R. A. Christopher, M.P.
Hon. Col. Lowther, M.P.
J. C. Colthild, Esq. M.P.
TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the ST. MARGARET'S ESTATE, Twickenham, Middlesex. The drawings and specification may be seen at the offices of the Surveyor, Mr. GEORGE MORGAN, on and after THURSDAY, JULY 6th, between the hours of TWELVE and FOUR. Tenders are to be sent in on or before TWELVE o'clock on FRIDAY, JULY 14th, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. St. Margaret's Estate." The executive committee do not bind themselves to accept the lowest or any Tender.
CHARLES LEWIS GRUSEISEN.
33, Norfolk-street, Strand, June 26th, 1854.

CONTRACTS.

TO BUILDERS.
PERSONS desirous of CONTRACTING for the RENEWING, ERECTING a TIMBER and WEATHERBOARDING, and PAINTING the Parish Church of Margaret-Roding, Essex, from the Plans and Specifications of the Diocesan Surveyor, Mr. PRITCHETT, Architect, Bishop's Stortford, on and after 10th of JULY. Tenders to be delivered on the 14th. The Church-wardens do not bind themselves necessarily to accept the lowest Tender.

METROPOLITAN COMMISSION of SEWERS.—TO BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that the said Commissioners will meet at their Office, No. 1, Brook-street, Soho-square, on TUESDAY, the 11th day of JULY next, at ELEVEN o'clock in the forenoon, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain Intercepting BRICK and PIPE SEWERS in the Strand, in Parliament-street, Charles-street, Cherry Garden-street, Upper-street, Bermondsey-road, Lewisham-hill, and other streets and places in Rotherhithe, Bermondsey, Greenwich, and Lee-bank, on the north side of Surrey and Kent respectively, and for the maintenance of such works in proper repair for twelve calendar months. Plans, sections, and specifications of the several works, together with the form of tender may be inspected and obtained at the Principal Office of the Commissioners, between the hours of NINE and FOUR o'clock, Saturdays excepted, between the hours of NINE a.m. and FOUR p.m. on the 5th JULY. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose tender or tenders may be accepted will be required to provide two sureties for the due performance of the work. No Tender will be received after such time as proposed.
No. 1, Great Russell, Soho-square.
Dated this 26th day of June, 1854.
H. WOOLRICH, Secretary

THE TOWN of BURTON-UPON-TRENT (Staffordshire).—TO BUILDERS, EXCAVATORS, &c. The Commissioners intend to have all the SEWERAGE TENDERS for making an OPEN DRAIN, with a Pipe Drain, about 10 Yards long, also for Excavating Gravel Pits, ranging from 21 inches to 9 inches diameter inside, for making one Bridge and for excavating various other works, delivered in the Sewerage Yard in the Town of Burton-upon-Trent.
Plans, sections, and specifications may be seen, and all necessary information received, at the Office of Mr. THOMAS SOWERBY, Town Surveyor, situate in Guild-street, Burton-upon-Trent, on and after MONDAY, the 26th day of JUNE, 1854, and WEDNESDAY be refore the 28th day of JULY, 1854.
Sealed Tenders, endorsed "Tenders for Sewerage Works," to be forwarded to me by post, or otherwise, on or before THURSDAY, the 27th day of JULY, 54.
The Commissioners do not hold themselves to accept the lowest Tender.
By order,
WILLIAM DIXON, Clerk to the Commissioners.
Commissioners' Office, Burton-upon-Trent, June 20th, 1854.

TO BUILDERS
PERSONS desirous to TENDER for certain ADDITIONS and ALTERATIONS to be made to the REGENT STREET BRANCH of the UNION BANK of LONDON, Are hereby informed that they may inspect the drawings and specifications at the Office of Mr. JAMES THOMSON, Architect, No. 3, Bernard-street, Portland Place, on THURSDAY, JULY 6, and may deliver their estimates by THURSDAY, JULY 20, between the hours of TEN and TWELVE, after which The Directors do not hold themselves to accept the lowest Tender.

BROKEN KENTISH RAG.—The Highway Board for the Parish of Hythe are prepared to receive TENDERS for the supply of KENTISH RAG, broken to a 2-inch gauge, free from small and dust, at per cubic yard, the measuring waggon to be delivered at the place at which the distance between the quarry of contract and the said Parish of Hythe is ascertained to be the shortest, on or before THURSDAY, the 6th day of July, endorsed "Tender for Broken Kentish Rag," addressed to Mr. RAMSAY, Surveyor to the Board, 11, High-street, Hythe, Middlesex.
By order,
TOLLMIN SMITH, Chairman

FREDERICK SLIGHT, Secretary.
Lincoln's-inn-fields.

TO BUILDERS AND CONTRACTORS.
PERSONS wishing to CONTRACT for a TIMBER BUILDING-PIER west of Hobbs's-ridge, on the Sussex coast, of about 180 feet in extent, with a pierhead 60 feet long, and 24 feet wide, with running iron-work, can inspect the plans and specification at the POLICE-OFFICE, Shoreham, Sussex, on and after MONDAY, the 3rd of JULY, when Tenders will be received.
POLICE-M.

[For remainder of Contracts see next page.

CONTRACTS.

LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS and BUILDERS.—The Directors of the London and North Western Railway Company are about to receive TENDERS for the ERECTION of ADDITIONAL WORKSHOPS and SHEDS at Wolverton Station, Buckinghamshire, and for the ENLARGEMENT of the Engine Shed at Rugby. Plans and specifications may be seen on the 6th inst., and the drawings and specifications may be seen on the same day. Tenders, addressed to the Secretary, at the Office, to be sent in on or before WEDNESDAY, JULY 15, at TEN o'clock. Per Order, CHAS. E. STEWART, Secretary.

Euston Station, June 29, 1854.

MARYPORT HARBOUR.—TO CONTRACTORS. The Trustees of Maryport Harbour are desirous of receiving TENDERS for the EXCAVATION, MASONRY, and WORKS required for deepening the Harbour and present Dock, and MAKING a NEW FLOATING DOCK, within the Harbour of Maryport.

Plans, specifications, and forms may be now lying at the Office of Mr. Jones, Dock Engineer, 2, Chapel-street, Westminster, and Trustees' Office, Maryport; and at the Office of the Harbour, where the receipt of tenders will be acknowledged, up to the 12th JULY next, at the Harbour Office.—By order,

R. BETHERINGTON, Clerk.

Harbour Office, Maryport, June 15, 1854.

GLOUCESTER BOARD of HEALTH.—IRON SEWERAGE CASTINGS.—TENDERS for CAST-IRON FLUSHING VALVES, BOXES, MANHOLE COVERS, VENTILATING GRATES, and GULLY GRATINGS, are to be delivered on application to the Surveyor, and sealed Tenders are required to be sent to the Board of Health Office, Bell-street, Gloucester, on or before WEDNESDAY, the 12th day of JULY next. Tenders to be made out, and estimates prepared, in such manner as to show the prices of the several articles separately, and to contain the names of two sureties for the performance of the contract.

K. H. FRYER,
Clerk to the Local Board of Health.

Gloucester, 27th June, 1854.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a VILLA and OUT-BUILDINGS at Forest Hill, Kent, are requested to apply for specifications, and to deposit their plans, at the Office of Mr. Lambeth and Brown, 21, Finch-lane, Cornhill, on Wednesday, the 5th day of JULY next. Tenders to be addressed to FIVE DAYS, the 12th JULY next. The Trustees do not bind themselves to accept the lowest or any Tender, and no Tender will be received unless delivered in strictly accordance with the conditions, of which a copy may be had on application at the Office aforesaid.

TO BUILDERS, CONTRACTORS AND OTHERS.

THE DIRECTORS of the LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY are desirous of receiving sealed TENDERS for constructing the ROADS, SURFACE DRAINAGE, and other Works on an estate at Peckham Rye. The specification and plans may be seen at the offices of the Society, 20a, High-street, Borough. Tenders must be delivered on or before FOUR o'clock on MONDAY, the 10th day of JULY next. The assurance of the Directors is not to be considered, and parties must be prepared to find sureties, if required.

June 29, 1854. By order, WM. BANKS, Secretary.

TO BUILDERS AND ROAD CONTRACTORS.

ST. MARYLEBONE EXTRAMURAL.

GENERAL PURPOSES COMMITTEE.—The Committee of the Board of Works for the Parish of St. Marylebone will meet at the Vestry Hall, Marylebone, on MONDAY, the 10th day of JULY next, at ELEVEN o'clock in the forenoon, to receive TENDERS for LEVELLING, MAKING, and METALLING the ROADS and FOOTPATHS, and for DRAINING 23 Acres of Ground, called the Newmarket Farm, East End, Finchley. Further particulars may be known on application at the Office of the Surveyor, Messrs. BARNETT and HILL, 3, Verulam-buildings, Gray's-inn, where plans, &c. can be obtained. The Tenders to be delivered sealed at the Committee Meeting above mentioned, at ELEVEN o'clock in the forenoon, and signed by two householders of the Parish, and accompanied by a letter from one of the Sureties, stating his place of abode and occupation. The Board do not bind themselves to accept the lowest or any Tender.

By order, W. G. GRENFELL, Clerk.

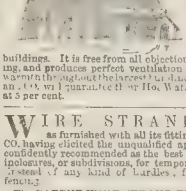
LOWEST BIRMINGHAM PRICES,

will be forwarded upon application.

FREDERICK HEATH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.—These fittings are all the newest improvements, and are the only patentees of this description. JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors east of the Pantheon.



COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements Registered and Patented. Lists and Plans on Detail Furniture on show.

COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

NEW HOUSES OF PARLIAMENT.—DEFRIES' GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock of all the same Ranges as fixed in the House, from 7l. by which warm baths may be obtained for three halfpence. Gas Cooking and Heating Stoves for Laundries, &c. DEFRIES' celebrated DRY GAS METER, the only one to which testimonials at the Office, 1, 2, and 3, Cloak-lane, or at the Manufactory, New-road, St. Pancras, near Pickering-place.

WARMING by HOT WATER.—J. WICKS and CO. KINGS-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, would respectfully solicit the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the following statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Boyce, delivered at a meeting of the Architectural Society, when Mr. Boyce shows that clearly hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest building. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles, for roads side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Scopes and Hampshire, at Windsor, has the important property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES, Gateshead-on-Tyne.
130, Strand, London.
7, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London, Contracts for Cistern Tanks, Grab Bars, Pumps, and all sorts of Iron Apparatus (the works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Slide Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 90,000 cubic feet room warmed by hot air only, at 56 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEAVES' PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by her Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOILEAVE, French Engineer, 55, King William-street, City.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large Stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sad-irons, and other castings. Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

ARTESIAN WELLS.—Boring for Water, Sinking Shafts, &c. The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity, by DAVID GREENELEY, Civil Engineer and Patentee of Boring Tools, 9, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, tubing, and steam pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

THE SMOKE NUISANCE.—To the Editor of "The Builder." Sir,—Can you or any of the numerous readers of your truly valuable Journal suggest a means for the consumption of the smoke that might apply to BAKING OVENS, where an INTENSE WHITE HEAT is required?—Address A. A. A. Office of "The Builder."

FOR SALE, a Capital IRON DOOR (price 8l.)—Apply at 79, Park-street, Grosvenor-square.

JOHN WALKER, CORRUGATED IRON ROOF and BUILDING MANUFACTURER, And GENERAL CONTRACTOR

Works, Mill Wall, Poplar, London; and Guildhall, Birkenhead.
Offices, Corner of Arthur-street West, London-bridge; and 66, Gracechurch-street.

THE SMOKE-CONSUMING STOVE invented by Dr. ARNOTT, and explained by him at the Society of Artsen Wednesday, MAY the 10th, insures perfect combustion, economises fuel, improves ventilation, and requires much less attention than other stoves in general use. Was manufactured by D. and E. BAILEY, 271 and 273, Holborn, who are prepared to supply new, or adapt old stoves to the principle.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Cullen's Recipe for Mottled Water Closet."—This water closet pan is made entirely of cast iron, and is fitted for high services, and for acting without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented. A diagram of the above may be had on application, or the closet inspected at the Manufactory, as above.

CUNDY'S PATENT STOVES.—The only pedestal stove which gained a prize medal (Class 4?0) at the Great Exhibition. Also especially adapted for warming churches, chapels, schools, &c. can be purchased only at the manufactory of CUTLER and SONS, Ironfounders, &c 16, Great Queen-street, Lincoln's-inn-fields, where a large Stock is always ready for immediate delivery.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for cheapness, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Pain and ornamental cast and wrought iron-work for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, in per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.
Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material
For covering Terraces, Flats, Floors, Stairs, Passages, &c it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about 18 oz. per foot super.
No. 12 " " " 20 oz. do. do.
No. 13 " " " 24 oz. do. do.
No. 14 " " " 28 oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,
DOWGATE DOCK, UPPER THAMES STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

A prize medal awarded at the Exhibition of all Nations.

FIRE—ROBBERY—VIOLENCE—PILLAGE.—MILNER'S HOLDFAST and FIRE RESISTING SAFES, the strongest safeguards in the world against.

EXTENSIVE FIRE IN GLASGOW.

MESSRS. DAVID HOLD AND CO.

Gentlemen,—At the serious fire in Union street yesterday, by which my counting house was destroyed, I owed the preservation of my books to the MILNER'S SAFE in which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.

I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.

27, Union-street, Glasgow, Feb. 22, 1854.

MILNER'S PHŒNIX SAFE WORKS, Liverpool; London Depôt, 47, Moorgate street, City

Sharpe, Tonge-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict much injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests of those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE USUAL AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N.B. The Tariff for 1854 is now ready
Pimlico Slate Works, 32 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, sinks, Lining, Skirting, Roofing, Maltese Filters, Patent Rules and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand Price-lists may be had upon application, either personally, or by post. Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves, Cisterns and every description of Slab work, Cisterns, Sinks, Slate Tanks, with plate glass sides, for fish-aquariums, &c. and every description of Slab work wrought and fixed on the shortest notice: 1½ inch Slate Paving, in runs, planed on one side, and squared, fitted to key, warranted stronger than Yorck Yorck, 6d. per foot super.—Baltic Wharf, Commercial-road, Lambeth.

T. B. HANNAFORD having been appointed Sole Agent of the TREVALGA SLATE COMPANY, begs to inform his friends and the public at large, that he is in a position to execute SLATING to any amount, at an extremely low price per square He particularly solicits an inspection of his Stock of ROOFING SLATES and SLABS, feeling convinced it will be at once perceived that for beauty, strength, and durability, they cannot be surpassed. BALTIC WHARF, Commercial road, Lambeth.

ABERDEEN and PETERHEAD POLISHED GRANITE.—Chimneypieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 112, John-street, Aberdeen; or A. and F. MANDELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

RAWDON-HILL and NEW-PARK SPRING STONE.
BRAMLEY FALL AND POTTERNEWTON STONE.
WAKEFIELD GRINDSTONES.
SAMUEL TRICKETT, STONE MERCHANT.
Prices and samples furnished. Delivered to any part. Address—VICTORIA STONE WHARF, ISLE OF DOGS.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.

All other kinds of wood goods at equally reasonable prices, for Cash.—N.B. The extensive saw-mills now erecting on the wharf are expected to be ready for work by the 1st of June.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 6, OXFORD-STREET.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of GLASS, now manufactured at WHOLESALE PRICES.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s. per case; 10s. ditto ditto, 34s. Also 16oz. ground ditto ditto, 4d. per foot; crowns and 16oz. sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 2d. per foot; ½-inch rough British plate tiles, 11s. per doz. Also crown and sheet glass in crates; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

FOREIGN SHEET GLASS.—WM. HICKSON, 48, Long-acre, is supplying the above in 5 feet cases, fourth quality; sizes 22 by 18, 29 by 23, at 26s.; 3rd by 30 and 40 by 32, at 31s.; third quality, 36s. single cases, and 4s. two and upwards; ground glass in sheets, 3½d. Terms cash.

THE PATENT CRYSTAL WINDOW, entirely superseding the use of Metal or Wood Sash Bars; the exclusive employment of glass for the entire window. The advantages of this material consist in the perfect transmission of light, elegance of appearance, imperishability from rust or decay, and the great facility with which it may be cleaned, and the economy of labour involved, contrasted with either metal or wood frames of shop-fronts entirely of this construction may be seen at the London Mantle and Shawl Company's, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Abergavenny, &c.—Full particulars may be obtained from the Patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plate Glass Manufacturers, Park Glass Works, Birmingham; or from Mr. MABERLY, 30, Buckingham-street, Adelphi, London; Messrs. HALL and SONS, Bristol; or Mr. M. BROOKS, 7, Midled Abbey-street, Dublin.

TO DEALERS IN BUILDING MATERIALS.

TO BE SOLD, the TWELVE PAIRS of large circular-headed SASHES, with cast-iron weights, and four wide flat segment ditto, part in good condition. May be seen on application, at Claremont Chapel, Islington.—Address, Mr. OWEN, Mr. Dever's Office, 16, Great Marlborough-street.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 95, Regent-street, and at his Steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York-road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons), Sash, Door, and Staircase Manufacturer, with well-seasoned materials and superior workmanship, at the lowest possible prices. Glazed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton, Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles, lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

An Out-door Apprentice Wanted.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cirapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TO BRICKMAKERS.

J. LEACH, BRICK MOULD MAKER, 26, CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON. Improved Brick Moulds, Stocks, and Screw Plates, instead of Stock Pegs.—N.B. Various sizes kept on hand, and numerous references where in use.

DUTCH CLINKERS imported by H. VANKEMPEN, 4, Brabant-court, Philpot-lane, City.

TO ROAD-MAKERS AND OTHERS.

DUST-YARD HARD CORE may be had in any quantity (free of expense) by applying to J. PEARKINS (Foreman), Dust-yard, St. Ann's-street, Westminster.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fire-places and Hearths, Curbs for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BLUE TILES and BRICKS, DORDON, BY ATHERSTONE.—J. SCARROTT, Manufacturer of Blue Bricks, Blue Roof Tiles, Blue and Red Quarries, Sewerage Pipes, Fire-bricks, and all kinds of Blue Brick Materials for Building, Kiln Tiles, Coping Bricks, Ridge Tiles, &c. &c. The above works are one mile from the Coventry Canal, and two and a half from the Trent Valley Railway Station, Atherstone.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC" is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURORS," page 981, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.

MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient buildings.

BENTHALL WORKS, near Broseley, Shropshire.

Specimens at 11, Aldersgate-street.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods: Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corn-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICKS.—From Kent Fields.—Grey Stocks, Shipping Parlors, &c.; also White Suffolk and Red Facing Bricks.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

WANTED, a quantity of RADIATED BRICKS. Quality must be good.—Address to Messrs. LEE and LAVERS, Borough Roymarket, Southwark.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

NEW BRICKS.—MR. BENJAMIN GOUGH is now prepared to execute orders for New Bricks to any extent.—Apply at No. 37, Newington-cresecent, Newington-butts.

BRICKS from COWLEY and KENT. Also WHITE, YELLOW, and RED FACING BRICKS. BLUE VITRIFIED BRICKS; Fire Bricks, Lumps, and Tiles. CHARLES RICHARDSON, 8, SOUTH WHARF, PADDINGTON.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had of Messrs. HOOPER and CO. 2, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

PATENT SUFFOLK FACING BRICKS.—THOMAS FOX and BROTHERS, Sudbury, invite the attention of builders and others to their superior PATENT PERFORATED BRICKS, which they can supply at any station on the Eastern Counties Railway, Sudbury, at LOW PRICES. Their best FACING BRICKS are particularly adapted for first-class buildings, being of a light PRIMROSE COLOUR, and MADE FROM THE FINEST MATERIAL. Samples forwarded, and specimens of work shown on application at the LONDON DEPOT, 12, Devonshire-street East, Mile end.

FOR SALE, a PAIR of STEPS, 8 feet high; a Pair of Trussels, 6 feet high; Three Planks, from 6 feet to 14 feet long; One Thirty-round Ladder, a strong and well made Truck, and Three Falls.—Can be seen, and particulars had at 7, Grove-place, Euston square, New-road, London.

60	2 2 4	5 17 1	6 12 1	6 6 11

MUTUAL BRANCH.
Assurers on the Bonus system are entitled, at the end of five years, and afterwards annually, to participate in four fifths, or 80 per cent. of the profits.
The profits assigned to each policy can be added to the sum assured, applied in the reduction of the annual premium, or be received in cash.
At the first division a return of 30 per cent. in cash on the premiums paid was declared; this will allow a permanent reduction in the future annual premiums for life of from 20 to 31 per cent. according to the age, and a reversionary increase varying from 50 to 85 per cent on the premiums, or from 1 to 3 per cent. on the sum assured.
One half of the "whole term" premium may remain on credit for seven years, or one-third of the premium may remain for life as a debt upon the policy at 5 per cent. or may be paid off at any time without notice.
Claims paid, in one week after proofs have been approved.
Loans upon good personal security.
No charge for policy stamps.
Medical attendants paid for their reports.
Persons may proceed to or reside in any part of Europe or British North America without extra charge
The medical officers attend every day at Throgmorton-street, at a quarter before two o'clock.
E. BATES, Resident Director.

SCOTTISH EQUITABLE LIFE
ASSURANCE SOCIETY.—Instituted 1831.
PRESIDENT
His Grace the Duke of Buccleuch and Queensberry, K.G.
MANAGER—Robert Christie, Esq.
SECRETARY—William Finlay, Esq.
Head Office 26, St. Andrew-square, Edinburgh.
The Twenty-third Annual General Meeting of this Society was held at Edinburgh on the 3rd May, 1854, William Stuart Walker, Esq. of Belmont, in the Chair.
The Report read to the Meeting, and which was unanimously approved of, contained the following particulars:
The number of Policies issued during the year ending 31st March 1854, was 1,062, the sums Assured thereby being £282,745, giving an addition to the Income in Annual Premiums of £9,304.
The Policies lapsed by death during the year are eight-four, the Sums Assured by which amount to £2,800, and the Bonus Additions to £822 making together £3,622.
In comparing these sums with the amounts for the preceding year, they exhibit an increase of seventeen in the number of new Policies, and a half at above in the Sums Assured. The increase, though of moderate amount, must be considered satisfactory, especially when regard is had to the great competition which now exists in the business of Life Assurance.
The number of Policies lapsed is four under that of last year, and the amount Payable on ready Deaths keeping in view Equitable principles to the business, and the increased care of the members of the Society, there are most gratifying circumstances.
The Sums remaining Assured amount to £2,244,584;
The Annual Revenue, exclusive of Interest, to £81,000;
And the Accumulated Fund, as per last Balance, to £340,000.
*** Medical Referees paid by the Society.
VIEW OF THE PROGRESS AND SITUATION OF THE SOCIETY.

	Amount Assured.	Annual Revenue.	Accumulated Fund.

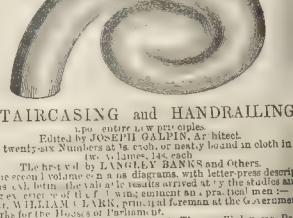
POLICIES RENDERED INDISPUTABLE
By a Resolution of the Society, Policies may, after being of five years' endurance, be declared indisputable on any ground whatever, save the Assured's consent to travel or reside beyond the limits of Europe, without payment of Extra Premium for such travelling or residence. Special application must be made to the Directors for such privileges, however, and satisfactory evidence adduced that, at the time of the application, the Assured has no prospect of migration of so unbecoming to limits of Europe.
The Amount of Claims paid to the Representatives of deceased Members exceeds
SIX HUNDRED THOUSAND POUNDS
Copies of the Reports, Proposals, and all other information may be had on application to the Head Office in Edinburgh, to any of the Country Agents, and to the London Agents, the Bishopsgate-street.
WILLIAM COOK, Agent.
London, June, 1854.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers. Also at Mr JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

JAHN, LUETJENS, and WASSNER, Regent street, DECORATIVE ARTISTS, orders for Painting and Wall Decorations executed in the highest style, at a very moderate charge. Messrs. JAHN, LUETJENS, and WASSNER have given the greatest satisfaction by their artistic success at the principal palaces of Munich and Dresden, and during the last twelve months, at the Pompeian and Raman Courts of the Crystal Palace, Sydenham. They beg to invite the attention of the nobility and gentry and of architects, to their specimens of ornamental work. Ceiling and Wall Decorations, for town or country mansions, carried out in the shortest notice with out the slightest inconvenience to occupants of mansions.—JAHN and CO. 73, Regent-street, Quadrant.



CRYSTAL PALACE.—Railway Travellers can obtain TICKETS of INSURANCE against RAILWAY ACCIDENTS for the season, on payment of 11s. 2d. or 3s. by inquiring of the Booking Clerk at all the principal stations where they take a Railway Ticket. Railway Passengers' Assurance Office, 3, Old Broad street.
WILLIAM J. VIAN, Secretary.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply the trade generally with their Colours, which for quality and lowness of price are unequalled. Samples of the Colours may be seen at the Offices of the Company, No. 31, Pall-mall.—Address, W. PROSSER, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey.

WINSOR and NEWTON'S NEW SKETCHING EASEL.
This Easel possesses those qualities most required by the sketcher and tourist, and which have not hitherto been successfully combined. It is very portable, of extreme lightness (its weight being only 4½ lbs.), of the simplest construction, and the novel adaptation of a joint, or collar of India-rubber, allows the legs to be placed in any position most suited to the sketcher, permitting the Easel to be used on uneven ground, and yet remaining perfectly firm.
PRICE

The New Sketching Easel, Deal	5s. 6d.
Ditto, Polished Deal	7 0
Ditto, Mahogany	10 6
Ditto, Polished Mahogany	14 0

WINSOR and NEWTON, 38, Rathbone-place, London: Manufactory Artists' Colourman, by Appointment to her Majesty and H.R.H. Prince Albert. Sold by all Artists' Colourmen.

STAIRCASING and HANDRAILING
Upon entirely new principles.
Edited by JOSEPH GALPIN, Architect.
In twenty-six Numbers at 1s. each, or neatly bound in cloth in two Volumes, 14s. each
The Second Volume contains diagrams, with letter-press descriptions explaining the principle results arrived at by the studies and long experience of the following eminent and practical men:—
Mr. WILLIAM CLARK, principal foreman at the Government Works for the Houses of Parliament.
Mr. FORSTER, principal foreman to Thomas Finley, esq. Paddington.
Mr. WESTON, staircase builder, Swiss Cottage, Regent's-park, and branch of the art at the Mechanics' Progressive Institution, Leicester square, and Lecturer on the celebrated Twin Saws, which make a circular, single, and parallel cut at a single stroke.
Mr. W. B. PERRY, staircase builder, Kennington, and teacher of geometry at the Mechanics' Progressive Institution, Leicester square.
Mr. WILLIAM INWARDS, staircase builder, Augustus-street, Regent's park.
Either Volume will be sent (per return) postage-free, on the receipt of a post office order addressed to Mr. JOSEPH GALPIN, 7, Adelphi-terrace, Strand, London, and payable at the Gray's-inn-road Post office.
Also may be had,
THE JOINERS' COAT OF ARMS, CREST, and MOTTO (given from the Herald's College, by Mr. GALPIN), beautifully emblazoned on a Plate, 15 by 11 inches, brought out in the richest of upwards of 50 of the leading Builders, their Foremen, and Joiners of London. It requires eight plates to produce this—one for the gold, another for the silver, and one for each respective hue. Price 2s. 6d. each.

On Wednesday, July 12, in 18mo. with Woodcuts,
SOUND and its PHENOMENA.
By the Rev. E. C. BREWER, D.D. Trinity Hall, Cambridge, Author of "A Guide to English Composition," 12mo. price 3s. 6d. "Poetical Chronology" 18mo. price 3s. 6d. &c.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

TABLES for the use of ARCHITECTS, Surveyors, Builders, Mahogany, Deal, and Timber Merchants, &c. in Pricing Materials in Rough from the Yard, the thicknesses therein, in lay accounts, or as found net in every description of Joinery, &c. &c.
By JAMES WARE, Building Surveyor, Derby.
Price 6s. May be had of Messrs. Land and Revely, 6, Paternoster-row, London; of W. HORSLEY, Sadlergate bridge, Derby, and of all Booksellers; or from the Author, 30, Abbey-street, Derby, on receipt of 7s. 6d. in postage-stamps.

THE FREEMASONS' QUARTERLY MAGAZINE, New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps to cost of postage). No. V. for April, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

ARCHITECTURAL PUBLICATION SOCIETY.—Instituted 1848. Copies of the works for first year (1849) are required for new subscribers. The DICTIONARY OF ARCHITECTURE commenced for the year 1852-53, is supplied to members on payment of the annual subscription of one guinea.
Treasurer, THOMAS L. DONALDSON, Bolton Gardens, Russell-square.
Honorary Secretary, WYATT PAPWORTH, Esq. 14, Great Marlborough-street, from whom a list of the works issued may be obtained.

The Builder.

SATURDAY, JULY 1, 1854.

THE London Company of Tilers and Bricklayers have two chests full of papers, which would supply materials for an interesting little book, if examined by a competent hand. Mr. Jupp did this good turn for the Company of Carpenters, and produced a valuable and entertaining volume.* We made a hasty dip into these chests a little time ago, under the eyes of the Master and two Wardens, according to rule in such case made and provided, and saw enough to justify our first remark, though not enough to enable us to give any precise account of their contents. According to the received statements, the bricklayers of London were incorporated in 1568, the governing officers being a master, two wardens, and twenty assistants, with (at that time) seventy-eight freerymen. Their armorial ensigns are "azure, a chevron or, between a fleur-de-lis argent, between two brick-axes in chief, and a bundle of laths in nose or, crest, an armed hand holding a brickaxe or." Babel, Babylon, and Egypt fill the antiquity of bricklaying:—"If (says Mr. Donne),—

> "If you had lived, Sir,
> Time enough to have been interpreter
> To *Babel's* bricklayers, sure the tower had stood."

"Bricklayers' work," wrote Moxon, in 1682, "is an art manual which joins several bodies together, that they adhere like one entire body. Whether the white mason, which is the hewer of *stone*, or the red mason, which is the hewer of *brick*, be the most ancient, I know not; but in Holy Writ we read of *making* of bricks before we read of digging or hewing of stones; therefore, we may suppose the red mason (or bricklayer), to be the most ancient.†

Three pages are devoted to a description of a bricklayer's tools, twenty-three in all, and he makes his information the clearer by giving two pages of copperplate engravings of the different instruments. These preliminary matters completed, he now commences with his main subject;—"*And first of foundations.*" "Tis usual, and also very convenient," says he, for any person before he begins to erect a building, to have designs or draughts drawn on paper or vellum, and also if it be a large building, to have a model of it made in wainscot, which designs and model the ground plot or topography of each floor or story is delineated and represented; as also the fashion and form of each front, together with the windows, doors, and ornaments, if they intend any."

"This," writes Randle Holme, in his rare book, "The Store House of Armory and Blazon," "was a very ancient trade, for it took beginning in the beginning of the world. For no sooner was the Flood gone from off the face of the earth, and men began to multiply thereon, but (come (say they) let us build a citty, and a tower whose top may reach to heaven, that we may get us a name; and this they made of brick cement in the fire, as we may read (Genesis ii. 3-4) And those famous piramedes, built in Egypt by the Israelits, in the tyme of their bondage (which are said to remain to this day) were all made of *brick*, as may appear from Exodus v. 7, 8," &c.

He describes the instruments quaintly, and gives of each a distinct representation for the purposes of his professional "blazonry," concluding his labours in this particular with a representation of the "arms of the company of brick-*makers* in the city of Chester, in which place the book was printed in 1688."

However, this is not all which is to be found in our author relating to the bricklayer; for in a preceding chapter, headed "Builders' Instruments," commencing with "a crane, *argent*," he recites a host of yet well-known namings in the general profession, as "The plumb-rule showeth him whether his walling doth range straight and stand upright; which if neither, there may be a timely mending."

Nor is even the wheelbarrow overlooked by our author, who does it honour, by making it an object of heraldry:—

"He beareth argent, a wheel-barrow, gules. This is an instrument used much by workmen of the trowell, for the transporting of their materials (for the work) from place to place; and though the thing carried be of a great burthen, yet by the help thereof, and the labour of one man, it is with much ease brought to the place designed."

Next he engraves and describes the barrow proper, or "bearing-barrow, because burthens are carried on it by two persons;" also a "hand-barrow," being "supported by hand, to distinguish it from the barrow that runneth upon a wheel."

The "London Tradesman" (1757) says:—"The bricklayer comes next under consideration: he works by the yard, that is, is paid by the employer so much for every yard of brick-work, either with or without the materials, and is a very profitable business, especially if they confine themselves to work for others, and do not launch out into building projects of their own, which frequently ruins them. It is no new thing in London for those master-builders to build themselves out of their own houses, and find themselves in jail with their own materials. A journeyman bricklayer has commonly half-a-crown a day, and the foreman of the work may have three shillings, or perhaps a guinea a week; but they are out of business for five, if not six months in the year; and, in and about London, drink more than one-third of the other six."

In the same book the date of the incorporation of the trade in London is said to be 1567; their hall in Leadenhall-street; and that the apprentice-fee taken by the master varied from 5*l.* to 20*l.*; the hours of work being from six to six; while the "sum necessary to set up as a master" is put at from 100*l.* to 1,000*l.*

The bricklayer is one of the twenty-four trades named in sec. 30, chap. 4, 5 Eliz. who were permitted to take as apprentices the sons of such poor people as were not owners of land—a singular favour. By another section of the same Act, the artificer or labourer who might be retained for the building or repairing of any church, house, shop, &c. could not throw up his work, unless it were for the non-payment of such wages as had been agreed upon, without risk of being subjected to an imprisonment of one month, and also to pay a fine of 5*l.*

The charter granted by Queen Elizabeth to the Tilers and Bricklayers provides,—

"That it shall and may be lawful to the master and wardens of the said fellowship, or two of them, or two other honest men of the said art, by the same master and wardens to be appointed twice every year, or oftener if they shall think it good, to enter into all and every place and places where any earth or clay shall be digged or broken to be occupied with or about the laying of brick or tyle, or for the making of lime, and to search, view, and understand by their knowledge and discretion whether the said earth or clay be good and well tempered to make brick and tyle of or no, and whether the stone, chalk, and sand be meet and convenient to be occupied in the same art for the making of lime, or to be tempered with lime."

Also to see if various dimensions are adhered to:—

"And if the said master and wardens, or two of them, do find any such default with any of the stuff aforesaid, meant to be put to sale as aforesaid, or to any manner of person or persons shall bring or cause to be brought any kind of tyle, brick, or lime made of insufficient stuff, or not of the said assizes, or any sand being not lawful, meet, convenient, or sufficient to be sold and occupied in the said art, within the city of London, the suburbs thereof, or within fifteen miles' compass of the same city, then it shall be lawful for the master and wardens" to break in pieces the bricks, and fine the makers.

Then follows a long "item," specifying their right to search all "tyle carts" which may come into London, and another regarding lime.

The bricklayers now and then stepped beyond their province, as the Carpenters' Company thought, and we find that in the bye-laws of the latter framed in 1607, the earliest of their bye-laws preserved, it is set forth that "diuers Masons, brycklayers, and tylers, plasterers and others not hauinge any skyll or vnderstandinge in workemanshippe of y^r art trade or mistery of Carpentry, nor of other craftes, artes, or misteryes besides their owne yet oftentymes they doe take vppon them in a bargaine by great not only to deale for such thinges as apperteine to their owne art, craft, or mistery, But also to finishe diuers partes and many tymes ye whole buildinges of sundry of ye Kinges Maiestyes subiectes for many other parcells of worke besides their owne craft or mistery belongeinge to diueres other artificers of other artes, craftes, or misteryes (so that by any bargayne or deuice for their owne priuate comodity they maye finish the same good cheape) whereby the kinges maiesties said subiectes beinge owners of the buildinge are very much and often deceaued of true and substanciall stuffe and workemanshippe."

It was in consequence ordered and ordained that no freeman of the said mystery of carpentry should work in that art with any bricklayer or tyler "by great, but only for wages by the day, and not by bargaine in great to th' end the workmanshippe may be well donne," under penalty of a sum not exceeding 3*l.* In the time of King James proclamations were issued to command the use of brick and stone for the fore-fronts of houses, whereat the tilers and bricklayers rejoiced, but the carpenters grieved, and presented a petition so strongly worded, that the Master was sent to prison for his share in it. And then there was a considerable struggle between the two companies as to the respective merits of brick and timber buildings. In 1647 we find the Carpenters sending a remonstrance to the Court of Aldermen concerning the Bricklayers, and in 1650 they drew up a paper conveying "their reasons that tymber buildings were more commodious for this citie than brick buildings were." In the following year, on a certain 18th of February, like good-natured fellows, they spent 2s. 9d. at the "3 Tunns in Gratious Street, with the Master and Wardens of the Bricklayers Company," to settle some of their differences.*

The fire of 1666 was a strong reply to the Carpenters' "reasons," and put the Bricklayers into full feather. Instead of further squabbling just then, the two Companies united against "florreyne" workmen being allowed to work in the City as masters: all who were not freemen were "florreyners;" and it was pointed out that if such were permitted to practise, "much insufficient and noughty worke" might be done.

The Act for rebuilding the City, passed after the fire, after setting forth that "building with brick was not only more comely and durable, but also more safe," enacted that all the outsides of all buildings in and about the City should be made of brick or stone. By an Act of the Common Council, in Nov. 1667, the Bricklayers' Company (as well as others) were bound to elect yearly a certain number of men to be ready on all occasions of fire to attend the

* Jupp's Account.

Lord Mayor and sheriffs for quenching the same.

Looking back into the chests, the earliest minute-book that we found commences in 1580, at which time nearly all the members of the court made their "mark," instead of writing their name; and it is a circumstance worth noting, that these marks are not simply a cross or an initial, but are similar to those to be seen on the face of stones in old buildings in England, France, Germany, and Belgium, to say nothing of more distant parts.*

One Order, passed on St. Lawrence's day, 1591, decrees "that noe man shall reveale words spoken in the house." In the charter and oaths, dated 1684, it is ordered that no person shall be a liveryman who holds not communion with the Church of England, or who "frequents conventicles or any other unlawful meetings!" In an earlier document, the members are enjoined not "to supplant another in the trade about any base gaine;" and "not to revile any of the craft with unfitting words." There is one deed addressed to Sir Nicholas Bacon and others, containing stipulations as to the trade, which gives them the right of claiming a farthing per thousand on all bricks made within a certain distance. In the reign of George I. (1723) power was given to the company to fine those who made bricks or tiles of bad earth.

In one of the chests there is the early French edition of Serlio, 1551, and a black-letter Bible and chain, which has not been much used, though knocked about externally.

"Was there a dinner on the day of your visit, Mr. Editor?"

Of course there was,—a very pleasant dinner; with "Master" Robert Cantwell in the chair, and many well known in the craft around him; and long may the honourable court of this honourable Company meet to dispense charity and foster good feelings; maintaining their ancient motto, "In God is all our trust," and engrafting on their laws of old-time whatever may be necessary to fit them for the present.

* A collection of these by Mr. Godwin is printed in the *Archæologia*.

ON SOME RECENT DISCOVERIES AT FOUNTAINS ABBEY.

EARL DE GREY is continuing his works of exploration and maintenance at Fountains Abbey, and on the 29th May his lordship gave, at the Institute of British Architects, some particulars of the most recent discoveries. Letters on the subject were also read from Mr. William Harrison, of Ripon. Some portions of these, understandable without drawings, we quote.

I have to apologise for not writing earlier respecting the interesting excavations now in progress at your Abbey of Fountains, but I have been waiting until the works had progressed as far as the middle transept; because, according to the MS. Chronicle deposited among your lordship's archives, it appears that most of the abbots, *after* the year 1435, were buried in the transept, or at the east end of the nave. However, as yet, the excavators have only uncovered two tombstones, one of which (that of Abbot Ripon, 1435) we had seen in the partial openings that took place in 1841. * * *

A fragment of a gravestone turned up in the rubbish of the south transept is inscribed "**Orate pro a'ŕa**:" I hope more of this stone may be found: it is of limestone—date late in the fifteenth or early in the sixteenth century.

Abbots Darnton and Huby (1479-1526) appear to have repaved portions of the transept and nave with tiles of the same pattern as those found in the hall of the abbots' house: one has the arms of the abbey—three horse-shoes—surrounded by that beautiful and appropriate inscription, "**Benedicite Fontes Domino**:" the other has a mitre and a crosier on a shield, impaling Huby's initials, M.H.; and his favourite inscription, so frequently repeated on the tower, "**Soli Deo honor et gloria.**"

As many of these tiles have been severely burnt, apparently by large fires being kindled on the floor of the nave and transept, and as the earth in several places is quite black with ashes, I have no doubt but that when the abbey was pillaged, great bonfires were made of the wooden lattice-work and screens, and the lead of the roofs was melted into "pigs," for more convenient carriage. A passage in a curious letter, published by Sir Henry Ellis, is highly illustrative of this idea, and gives a complete picture of the destruction that took place at the dissolution of the monasteries.

The writer, who lived in Yorkshire, says, "It would have made a heart of flint to have melted and wept to have seen the breaking-up of the house, and their sorrowful departing; and *the sudden spoil that fell the same day of their departure from the house.* And every person had everything good-cheap, except the poor monks, friars, and nuns, that had no money to bestow of anything, as it appeared, by the suppression of an abbey, hard by me, called the Roche Abbey; a house of white monks, a very fair-builded house, all of freestone, and every house vaulted with freestone, and covered with lead (as the abbeys was in England, as well as the churches be). At the breaking-up whereof an uncle of mine was present, being well acquainted with certain of the monks there; and when they were put forth of the house, one of the monks, his friend, told him that every one of the convent had given to him his cell wherein he lied; wherein was not anything of price, but his bed and apparel, which was but simple and of small price; which monk willed my uncle to buy something of him, who said, 'I see nothing that is worth money to my use.' 'No!' said he, 'give me ij^d^ for my cell door, which was never made with v^d^.' 'No,' said my uncle, 'I know not what to do with it' (for he was a young man unmarried, and then neither stood in need of houses nor doors). But such persons as afterwards bought their corn and hay, or such like, found all the doors either open, or the locks and shackles plucked away,* or the door itself taken away, went in and took what they found, and filched it away.

"Some took the service books that lied in the church, and laid them upon their waine-coppes to piece the same; some took windows of the hayleith and hid them in their hay; and likewise they did of many other things; for some pulled forth the iron hooks out of the walls that bought none, when the yeomen and gentlemen of the country had bought the timber of the church. For the church was the first thing that was put to the spoil; and then the abbot's lodging, dorter and frater, with the cloister, and all the buildings thereabout within the abbey walls; for nothing was spared but the ox-houses and swine-cotes, and such other houses of office that stood without the walls, which had more favour showed than the very church itself; which was done by the advice of Cromwell, as Fox reporteth in his book of Acts and Monuments. It would have pitied any heart to see what tearing up of the lead there was, and plucking up of boards, and throwing down of the spars; and when the lead was torn off and cast down into the church, and the tombs in the church all broken (for in most abbeys were divers noble men and women, yea, in some abbeys, kings, whose tombs were regarded no more than the tombs of all other inferior persons for to what end should they stand, when the church over them was not spared for their cause?); and all things of price either spoiled, carped away, or defaced to the uttermost.

"The persons that cast the lead into fodders plucked up all the seats in the choir, wherein the monks sat when they said service, which were like to the seats in minsters, and burned them, and melted the lead therewithall, although there was wood plenty within a flight-shot of them, for the Abbey stood among the woods and the rocks of stone, in which rocks was pewter vessels found that was conveyed away and there hid; so that *every person bent himself to filch and spoil what he could, yea, even such persons were content to spoil them that seemed not two days before to allow their religion,* and do great worship and reverence at their mattins, masses, and other service, and all other their doings, which is a strange thing to say, that they could this day think it to be the house of God, and the next day the house of the devil; or else they would not have been so ready to have spoiled it.

"For the better proof of this my saying, I demanded of my father, thirty years after the Suppression, which had bought part of the timber of the Church, and all the timber in the steeple, with the bell frame, with others his partners therein (in the which steeple hung viij, yea ix. bells; whereof the least but one could not be bought at this day for xx^li^ which bells I did see hang there myself more than a year after the Suppression), whether he thought well of the religious persons and of the religion then used? And he told me yea; for, said he, I did see no cause to the contrary. 'Well,' said I 'then how came it to pass you was so ready to destroy and spoil the thing that you thought well of?' 'What should I do?' said he. 'Might I not, as well as others, have some profit of the spoil of the Abbey? for I did see all would away, and therefore I did as others did.' And thus much upon my own knowledge touching the fall of the said Roche Abbey."—*MS. Cole vol. xii. Ellis, III. iii.* 35.

Shortly after writing the letter in January, a few curious discoveries caused me to delay sending it, in order that I might forward additional information.

The rest of the gravestone beginning "**Orate pro a'ŕa**" has been discovered in the south transept. The inscription, in fine black letter, shows it to have covered the remains of Brother John Rypon "**Fr'is Joh'is Rippon**," a monk, I suspect, and not the abbot of that name. Unfortunately, the portion of the stone that would have furnished us with the title and dignity of "Brother John" is broken. The date, too, is gone, except the name of the month (March) and the last figure of the year of our Lord ...

I have since discovered, after a minute examination of the base of the holy-water stoup that its marble basin is *now used as the baptismal font in Aldfield Chapel.* It is most beautifully carved, and is evidently the work of the marble-mason of the abbey during the erection of the choir and lady chapel (1204, 1245), which is styled in the charters of *that date*, "Thomas Marmorarius de Sawley."

A screen once crossed the nave from pillar to pillar. In a space in the thickness of the screen a very curious discovery has been made, viz. a number *of large earthenware jars* laid in their sides, and embedded in the base of the wall, a very few inches below the level of the floor. They were filled with charcoal ashes, but at present it has puzzled us all to discover their use.

At the west-end of the nave, and a few feet in front of the pillars, we have found one or two of the *processional* stones.* They are of Morkar limestone, about 2 feet 3 inches square, with a ring lined out in the centre. On these stones the abbot and brethren arranged themselves prior to proceeding to perform service in the choir. The stone on which the abbot stood was *in the middle, at the west end*, only a few feet from the *west door.* Similar stones were formerly visible at the west-end of the nave of York Cathedral.

Bases of stone altars have been discovered fixed to the pillars of the nave. Two pillars have brackets for the images of the saints to whom these altars were dedicated. One altar (no doubt a wooden one) was placed on a small platform of tiles a foot higher than the floor of the rest of the church.

But the most curious discovery of all is the existence of a "Galilee" or west porch. To our astonishment we found that this porch first occupied the whole breadth of the west front

* It may not be uninteresting to state that the late Ralph Tingley, of Fountains—for many years the burly blacksmith at Studley Hall—purchased of his predecessor, or his executors, a great quantity of old iron—door hinges, staples, and crooks—which the said predecessor had wrenched from the Abbey walls. Ralph used to declare that it was the toughest iron he ever worked up.

* A minute investigation has since shown that the processional stones at Fountains are *fifty-two* in number. They range in straight lines 7 feet distant from the bases of the nave pillars. The pathway between them being 12 feet 8 inches wide. The bearer's stone is in the middle, at the east end of the nave, ninety feet distant from the abbot's standing-place.

(70 feet). I suspect, from the remains of the architectural fragments, that it had a series of interlacing arches, with double shafts, and that this arcade was always open to the air.

The wall in which the pots are deposited is evidently the base of a passage in the thickness of the old screen, which might be entered by a doorway in the side wall of the entrance through the screen, the floor being a step or two below the general level of the church. There is a small room in the thickness of the choir screen at Ripon Minster, on the north side—the similar space on the south side being occupied by the stone staircase leading to the organ loft. The screen in the church at Fountains not only crossed the nave from pillar to pillar, but it also occupied the space of the last arch of each *side aisle* of the nave. The pots or vases are laid in the wall on their sides, embedded in mortar. The depth of each vase is from 12 to 14 inches; the diameter across the widest part 10 inches; the mouth 6 or 7 inches in diameter. The necks of those in the west wall protruded slightly from the masonry; those in the north wall, when perfect, projected a little further.

The presence of the charcoal in and around the vases will not, I fear, assist us in coming to any conclusion as to the real use of them It may have been the embers of the fires (fed by the stalls and other lattice work) when the lead was melted at the dissolution of the monastery. Charcoal was also observed on several parts of the floor of the nave. Cinders were also found *in very small quantities*, mixed with charcoal in large quantities, in the pots or near them. It may be well to remark, that the whole of the depressed space in front of the wall in which the spots are imbedded, was filled with charcoal. It is my opinion that the charcoal has nothing to do with the purpose or use to which the pots have been put. We know, from written record, that the lead from the roof at Fountains was melted into "*pigs*," and the remains of a small furnace (*evidently post-reformation work*) were found, in making the recent excavations, attached to one of the pillars of the nave, *near* to the place where the pots were discovered. In fact, charcoal was found strewed in large and small quantities over the floor of the nave and transepts.

The "*written record*" alluded to, is in the Muniment room at Studley Royal; and it discloses the fact that a man was prosecuted for stealing "*pigs*" of lead from the Abbey at Fountains, in the time of Sir Richard Gresham, who had the site granted to him shortly after the dissolution.

I think these pots have been placed for some *local use*, which it is now impossible to guess. Their position proves that they could not be of much use for holding oil, or any liquid. They must have been intended to receive some *dry* substance, that could easily be taken out by the hand. One visitor, the other day, asserted that there was a similar instance in Durham Cathedral. But I cannot hear that such is actually the case. Mr. Walbran has written to the Rev. Jas. Raine (the librarian of the cathedral) on the subject, but a reply has not yet come to hand. Mr. Raine's able and learned little book on Durham Cathedral says nothing on the subject.*

Your lordship remarks, that this screen across the nave would have thrown the whole of the transept, north and south, into the choir. This arrangement was not uncommon, particularly in the Norman period; but the choir would only pass the transept, and the north and south aisles would be screened from the middle space, the breadth of the nave, or perhaps the breadth of the nave and aisles: the choir of Westminster Abbey is continued into the nave, *as far as the fifth pillar from the east*.

Before the erection of the beautiful choir and Lady Chapel at Fountains, we know from the Abbey Chronicle (written by Hugh, a monk of Kirkstall, between 1225 and 1247) that the Norman choir was a contracted space, and too small for the "*unusual*" number of monks officiating at that period. This caused John de Ebor, the eighth abbot, in 1203, to project the erection of the new choir. The plan* of Kirkstall Abbey Church—a daughter of Fountains, and built under the superintendence of the brethren of the latter house, gives the best idea of what the plan of Fountains was, previous to the days of John de Ebor. The church at Kirkstall has never been altered in *plan* from its Norman form. Insertions of perpendicular windows, and the addition of a story in the same period (temp. Henry VII.), to the centre tower, have taken place; but in plan the church is as it was first built, and I have no hesitation in saying that it was copied from Fountains.

If we dig a slight trench down the *centre* of either the north or south aisles of the choir at Fountains, from east to west (where the pavement is all gone, and where we can do no harm), we shall very probably discover the site of the eastern wall of the old choir, for I know that in several instances, where similar elongations have occurred, the old walls were only pulled down to the exact level of the floor.†

Just outside the newly-discovered west porch three beautiful perforated plates of lead have been found: two are exactly alike. We found a similar fragment of lead in excavating the abbot's house, but its style of design was a century later than these now discovered, which may be referred to the Decorated period (A.D. 1290—1390). A like relic was found in clearing out the abbey at Sawley. The one I have drawn weighs 2¾ oz. The other two weigh slightly over 3 oz. each. They are perforated, and *both sides* bear the same design. We at first imagined that these curious relics had been used for the purpose of more readily covering the panels of Aumbrye doors, or fine and small screen work, with elaborate tracery. Supposing the wooden surface to be first coloured with bright vermilion or ultramarine, this leaden tracery work, well silvered or gilt, would produce a rich effect. But the fact of the plates being *alike on* BOTH *surfaces*, destroys this theory. They may have been *patterns* moulded and cast in lead by the designers in the middle ages, and sold to the ecclesiastics or their architects, as new styles arose during the progress of Gothic architecture.‡ At all events, they are very curious and valuable relics, and, if not taken into your lordship's private collection, will be interesting objects in the abbey museum.

I would draw attention to the fact that the *highest inscription* on the tower *has never yet been deciphered*, partly on account of its position, but more particularly of its decayed condition. I have read portions of it through a good telescope; but it is impossible to make it out clearly, unless an experienced person were face to face with it. It may only be a religious inscription—perhaps a repetition of those below—but, to judge of other examples I have read of and seen, it is not improbable that it may contain some information of importance, historically, as regards the abbey. A similar black letter inscription on the south-west tower of York Cathedral bears the name of the "*Treasurer*," John Birmingham. With a little scaffolding from the top, this inscription at Fountains might easily be reached and read.

In conclusion, I would add, that I sincerely hope and trust that the noble and spirited example set by your lordship, not only in this *great* work, but also in the lesser one on the banks of the Ribble, will be speedily followed by other proprietors of our monastic remains. The time has arrived when this should be accomplished. Very few abbeys now present the same appearance as those of Fountains, Sawley, and Jervaulx. It is sad to call to mind the present state of Byland, Rivaulx, Kirkstall, Mount Grace, Guisborough, Easby, Coverham, and a score of others I could mention. Their storied pavements, the tombs and graves of our old patriots and dignified ecclesiastics, and the architectural fragments of their superb but "bare and ruined choirs," yet lie shrouded in the rubbish which "an undistinguishing reformation has heaped on their heads."

WILLIAM HARRISON.

---

* Mr. Raine has communicated with Mr. Walbran on the subject. He says there is nothing of the kind in Durham Cathedral. The traces of ancient arrangement *on the floor* have been obliterated.

* See "Sharpe's Architectural Parallels; Ground Plans," Vol. I.

† His lordship having expressed a wish that the termination of the Norman choir should be sought for, on Monday 30th June, 1851, after half an hour's excavation, it was found, together with the eastern walls of the first north and south chapels. It differs slightly from that at Kirkstall, inasmuch as three *first* chapels, on either side, are longer than the others. Its extent and position is indicated on the plan. Mr. Walbran discovered the Norman choir at Sawley shortly after the completion of the excavations there.

‡ Professor Willis states that these perforated lead plates are nothing more nor less than ventilators; and he has seen similar specimens yet occupying their original position in old windows.

ST. GILES.

ST. GILES' has always been a pet theme with architects and builders, and considering how wide its "fields" are for the introduction of their improvements, this is not surprising. Its past history hangs about it like an ill odour, however, in spite of its model lodging-house and its baths and washhouses. One cannot quite forget that olden time, before criminals became aristocratic, and went farther west to be hanged, when St. Giles had the honour of rearing the metropolitan gibbet, and it was within its precincts that the victim of Jack Ketch stopped to drink his last cup of ale—in this world—surrounded, no doubt, by a crowd of friends and admirers, the inhabitants of the dens and caves within sight of the George-street building. The Endell-street Baths, too—presided over by that helmeted and togaed Roman, clothed in his native cement, a little decomposing under the weight of the pediment over his head, but still, with his friend with the crook, daringly defiant of all meaning or consistency—have not quite washed away all traces from the surrounding alleys of that still older time, when the Hospital for Lepers, founded by Matilda, wife to the first Henry, stood here, and from which its present name is derived; and yet, tempting as the theme may be, it is quite another St. Giles to which—having now exhausted my little antiquarian lore—I am about to call your attention.

Down in the "garden of England"—Dorsetshire—after climbing high hills and traversing great moors, which would be exceedingly beautiful, even in winter time, if they were not given up to, and despotically ruled over by, a ruthless north wind, there winds a little stream called the Allen. What spirit of common-place has corrupted it I know not, but it once went by the name of the *Elain*, or Fawn, which aptly described its clear waters bounding over the pebbles in its course. On the banks of this stream stands our present St. Giles, in the parish of Winbourne St. Giles, Upwinbourne, Upwinbourne Malmaynes, or Upwinbourne Plecy,—Upwinbourne, in contra-distinction to Winbourne itself, which lies lower,—Upwinbourne Malmaynes, because, long long ago, when Edward I. was king, the house and estate belonged to the Malmaines, of whom, however, nothing is recorded, save that they came from Hampshire,—Upwinbourne Plecy, because still in the days of Edward I. it passed into the hands of Robert de Plecy, a near relative of the Earl of Warwick,—Winbourne St. Giles, I suppose, after the Plecy family had dwindled down to

"One fair daughter, and no more,"

who gave her hand and fortune to a Cornish gentleman of the name of Hamelyn. It was a female descendant again who brought this estate into the family of its present owners, for Egidia Hamelyn, after having married a husband of the name of Thame or Tame, whom she survived, made the second venture with Robert Ashley, a Wiltshire gentleman. By him she had three children, when he too died. This lady appears to have been nothing daunted, however, in her matrimonial career, for she returned again to the old stock, and took as a third husband a second Thame, whose Christian name was Thomas. The children of her second husband increased and multiplied, and their family tree has spread into two branches, one boasting amongst its historic names James Harris, first earl of Malmesbury, and the other Anthony Ashley Cooper, first earl of Shaftesbury, in whose family the ancient manor-house and park of Winbourne St. Giles, at present remain. This manor-house is interesting more from its age and the great names with which it has been connected, than from any beauty or merit of its own. The walls of this "parallelogram in three parts," as it is described in the "County History," are ornamented only by cheerless rows of monotonous windows, and a coating of

our old friend Roman cement. The angles are strengthened by massive quoins of the same material, and a long line of battlemented roofs presents a fine, though crumpled, front on the part of the swelling rocks and the neighbouring trees. The building has a sober brown appearance, which looks well against the surrounding green. Parterres of flower gardens there are none. A little sort of nursery ground, and one or two green-houses supply a few pot flowers, which are placed on bark or wirework stands, by the side of the ornamental water. There wants the grace even of an imitation of nature in this arrangement. The water, however, whether arranged by nature or art, is excellent, tumbling over little falls, winding through narrow passes into deep shaded dells, where it looks dark as night, yet clear as crystal, and spreading into a miniature lake in front of the house, where the teal and widgeon and wild duck flock as unconcerned as though the wild moor still surrounded them, and not the shade even of a Malmaines, a Pleey, or a Shaftesbury had ever wandered on the bank. Girting the park there is a double belt of pine trees, tall and solemn, and between them a wide walk or drive, carpetted with thick soft turf. This delicious promenade is they say, ten miles long, but I should doubt it. It is a pleasant place, and it is here (and in the glamouring twilight or when the noonday sun sheds a chequered glory on the turf beneath), the Corydons and Phillises of the neighbourhood come to walk and chat on subjects but little adapted to the scientific columns of this journal. Before entering the house there is one more object which remains to be noticed, and that is the "grotto." I forget whether it is said to be the first or second in England, but if it be the first, I am sure the second need not be jealous. It is said to have cost 10,000*l.*; to be composed of goodness knows how many million shells; and to have taken two years to construct, during which time no one saw it save one man, who was employed to assist in the work, and the Countess of Shaftesbury, who conceived the glorious idea. It is even said that a great portion of the shells were fixed by her own fair hands, but this must be a mistake, for they are put on in an ordinary way, which might have been done by her ladyship's dairy-maid. To tell the truth (if one might do so to a lady and a countess), this building deserves to be called "Her Ladyship's Folly," heaps of money having been spent and no result obtained. The graceful curves of the shells are pretty, as also the alternate pearl and blush tints of their transparent sides, but lighted up it can only resemble the tinsel and glitter of the last scene in a pantomime, and when grim daylight steals in, it looks still more like that delusive splendour.

I am not, in general, fond of the insides of strange houses even when they are noble men's seats, and there is nothing in this particular one to form an exception to the generalization. I should prefer, then, to linger outside where the country is so beautiful, but does not Mr. Hutchins, in his county history, tell me that "the apartments below stairs are esteemed some of the best in England?" Being in, let us hope that during the last half-century, since Mr. Hutchins wrote, some little improvement in English "apartments below stairs" have been made, for here there is not much to boast of,—rooms that would be large if they were not cut up into two by rows of scagliola columns, others that would be lofty if they were not brought down in appearance to an ordinary level by heavily-enriched plastering, carving that might be good if you could see it for the gilding with which it is overlaid. Still they are interesting rooms for their pictures and their associations. There was business and bustle here in the time of the civil wars of Charles I., during which the first Earl of Shaftesbury, then Sir Anthony Ashley Cooper, played so conspicuous and varied a part. First when attempting a reconciliation scheme between the king and the people by a system of mutual concession, which was frustrated at the outset by the jealousy of those about him, as, indeed, it would have been at the conclusion by the falseness of one of the contracting parties. St. Giles was gay with bright colours and cavalier feathers then. When the "Clubmen" were associated (a sort of armed neutral body to repress the excesses of either side), soldiers paced its halls, where ladies and carpet knights had stood before, and they, in their turn, shifted with the changing fortunes of its master, and gave place to the lank looks and sober garb of the Puritans. Courted by both parties, and mistrusted by both parties, placed in high commands, and disgraced, by both parties, Sir Anthony Ashley Cooper seems yet to have been more consistent than the times in which he lived. He is said to have been inordinately ambitious; but there is generally a system in ambition, and there was but little in the career of this man. Now in the king's confidence and of his party; now passing over to that of the parliament, but yet refusing to bring the secrets of the other side over with him; now fighting at the head of fifteen hundred men in his own county on the popular side; now assisting the restoration, and finally taking his place as Lord Chancellor under the new *régime*; and this not for long—he and a court so corrupt could not long be friends, so that his last public appearance is at his trial on a groundless charge of high treason, and then he retires to Holland to die. His portrait is here in his Chancellor's robes. There are two portraits by Lely of the second earl and countess, the lady with that *décolté, dégagé* air, peculiar to that age and painter, two large landscapes by Salvator Rosa, and many smaller pictures of more or less merit. Amongst the more modern additions, are two Canalettos, which I would even submit to be an earl to possess. In the library there is a portrait of old Henry Hastings, related to the Earls of Huntingdon, with a sketch of his character, supposed to have been written by the first Earl of Shaftesbury. It is a curiosity in its way, but too long for further notice here. There are busts and portraits of a more recent earl, who, if his career be neither so splendid nor so varied as his illustrious ancestor, will still take his place in the history of our land as one of the remarkable and leading men of the time. There is a portrait, too, of a countess of 1854, more beautiful by far than that Dorothy of 1684, and with a grace and lady-like air which ought to put that bold person to the blush. A chimney-piece, a ceiling, and a doorway by Inigo Jones, complete the artistic embellishments of the place.

I have not complimented St. Giles on its personal appearance, and if my readers are of the same opinion as myself they will consider that there is plenty of room for improvement. I am happy to be able to inform them that that improvement is being carried out. At present, the house is in that "grubby" condition which is to precede its "butterfly" state. Any beauty which it may hereafter possess will be entirely due to Mr. P. C. Hardwick, the architect to the present alterations, for it certainly had none before. Two towers break its former monotony, and form a pretty feature as you approach. High-pitched French roofs take the place of the old flat constructions. The battlements remain, although guns placed at them would have to stand on end, but then this is hypercritical, as architectural battlements have nothing to do with guns. A new saloon and dining-room will be added, and some of the scagliola obstructions cleared away, with various other additions and alterations, which, when completed, will no doubt make such a transformation as shall equally astonish the traducers and the admirers of the old place.

The works are being carried out by Messrs. H. and R. Holland, of London, and the workmen employed there have on more than one occasion been regaled at the expense of the earl with a half-holiday, games of cricket, and good old English cheer. They have a supply of books too from his lordship's library, and their earthly happiness is consummated by two copies of the *Builder* regularly taken in for their perusal.

B.

SCARCITY OF LABOUR IN CANADA.—Mr. Buchanan, the chief emigration agent at Quebec, in a letter to Captain Keele, of Glasgow, says, "Labour and service here are not to be had. I could employ 5,000 men, at a dollar a day. Scarcity of labour is the complaint from one end of Canada to the other. Mechanics are also very much wanted of all descriptions; wages from one to two dollars per day."

ON THE INFLUENCE OF DETAIL ON GENERAL DESIGN.

THE OXFORD AND WORCESTER ARCHITECTURAL SOCIETIES.

THESE societies held a meeting last week at Coventry, the venerable archdeacon in the chair. The president delivered an opening address; the Rev. G. A. Poole read a paper on Baginton Church; the Rev. W. K. R. Bedford a paper on Heraldry in Churches, and then the Hon F. Lygon read a discourse on the Influence of Detail on General Design, the greater part of which we quote.

"It is, I believe, a principle now almost universally admitted, that all works of art, whether consciously or unconsciously to the mind of the artist, do nevertheless in their style and design set forth the tendency of his mind; and when a similar result occurs in works of the same date, we conclude that it indicates some similarity of temper in the tone of the artists and their employers, and thence we are able to deduce with more or less accuracy the prevailing temper and spirit of the age. And as this is true of other arts, so especially of architecture, which embodies and absorbs all other arts. The hut of the savage at once proclaims the absence as well of civilization and refinement as of advanced mechanical skill on the part of its unpolished owner. On the other hand, the pyramids of Egypt, and the gorgeous palaces of Nineveh, unsupported as the latter are by all documentary evidence, announce at once that their designers eminently possessed intellectual cultivation and also considerable mechanical resources, and, at the same time, there is a grandeur and vastness about them which bespeaks the despotic authority necessary to control those large masses of mankind who laboured in the erection of such enormous piles. Architecture is a petrifaction not only of religion, but of history and mind, and that architecture must indeed be rude and barren which does not yield us some information of the tone and character which produced its development. The buildings of Greece yet tell of the artistic taste and intellectual refinement which pervaded that small and wonderous portion of the earth. The severe Doric and the graceful Ionic, no less than the dialects of the same name, reveal somewhat of the irreconcilable differences between the two races. 'The Doric character,' says Müller, in his history of the Dorians, 'created the Doric architecture. . . . . thus, in this creation of ar we find expressed the peculiar bias of the Dori race to strict rule, simple proportion, and pur harmony.' Obvious as is this instance, th principle will hold true in a more remarkab manner of Christian art in our own countr The enduring and quiet simplicity of Saxo architecture acquired a richness not its ow when the accomplished Norman brought mo decorative skill to lavish on the ruder structur of his conquered foe; and the pointed ar realized that which both Norman and Saxo struggled to achieve, namely, the developme of vertical lines, when the second pointed sty exhibited the perfection of Christian art, a expressed 'the beauty of holiness' in the ag of Faith. So, again, in the third pointed sty the monotony of human worldliness and selfi ness is produced and reproduced, and its st ness and secular character creep out throu all the gorgeous details, which shed a borrow lustre over its decaying life, and at last t debased style of Elizabeth and James is no l the natural result of the splendid meagren and unspiritual bombast which belonged Tudor architecture, than the subsequent o break of Puritans against Church and St legitimately resulted from the loosening of lief and pandering to the pride of human in lect, which was the immediate result of Reformation. And yet later, the classical ta of the last century is announced by the affec tion and pseudo-imitation of the ancients, wh induced our grandfathers and great grandfath to destroy and neglect, as barbarous, th triumphs of mediæval faith and skill which our proudest boast to imitate, cherish, and store. And still more recently the lesson not less instructive: mediæval artists had exhausted their skill, and left none behind to l on the great principles which guided th Wren and his coadjutors had striven to in

life and spirit into reproductions of foreign art, at once alien from the character of the English, and unsuited to a borrowed home; but they had striven in vain, and so their efforts to renovate architecture languished and failed. Some, however, there were, even then, who discerned the absurdity of reviving in England the exploded beauties of the Pagan world, but yet they had not earnestness or power to summon from the tomb the spirit which animated the great men of the middle ages, and so arose the school of modern Gothic, whose apostle was Wyatt, the devastator of Salisbury. 'In the criticism of this age (to appropriate from another subject the very apposite words of Mrs. Jameson) the spirit of the work, whether the conception were properly characteristic of the subject, or of the time;—whether the design was modified by the individuality of the artist or by received conventionalisms,"—of such things there was no account, and the accepted mode of devising a Gothic *pile* was, what I hope to be pardoned for venturing to term, com-*pile*-ation. A window was conveyed from one source, a crocket from another, a gargoyle from a third; and these were applied to the shell of a building which critics were forthwith summoned to come and admire. And thus we have gone stumbling on, till Mr. Pugin, whose loss we can never sufficiently deplore, sounded the trumpet, and raised a crusade against the modern Gothic. The principle adopted has been to select a few shafts, the window from the 'Glossary of Architecture,' several pinnacles, a buttress or two, large or small, and having mixed these well together in various proportions, to produce the whole to an astonished world as a masterpiece of Gothic art, far superior to the works of Wykeham; if it is a building that is required, or if furniture (for the same convenient method of course does for both) far more convenient and suitable and beautiful than our benighted ancestors ever dreamt of using. And thus it happens at the present time, that detail exercises such an influence over general design. Artists borrow a certain amount of detail, and apply it to the object on hand, and forget that detail, however valuable and graceful an adjunct to a correct design, no more compensates for its absence than does the gorgeous binding of a worthless book compensate for the literary defects of the work. Take, for instance, the Houses of Parliament: a gigantic tribute to the mediæval taste of the day. Is that long unbroken front, so endless, and so monotonous, is that a building the design of which we can pronounce correct? No one can deny that it is a costly failure,—a clever aggregation of sumptuous details, lacking, however, that animating coherence which alone imparts life to so vast a structure. It is sad to think of the vast sums lavished on this structure, and then to reflect that this outlay, if judiciously directed, might have produced an edifice to defy and surpass the proudest and stateliest of our forefathers' works. And yet nothing, perhaps, has more contributed to the revival of correct principles of design than the erection of the Houses of Parliament, because men have been brought to see and admit that mere knowledge of detail does not suffice; and from the contemplation of these details they have been led to appreciate more fully the harmony which mediæval architects realized, and which we have failed to achieve. In adapting piecemeal the works of the past, we forget the dishonour and insult we really offer to those we profess to imitate and follow. If a Greek architect, such as reared the Parthenon, were required to construct a museum and library suited to England and its climate, does any one suppose that he would produce anything like the Taylor Buildings? Surely not. He would repudiate with scorn the idea, that a number of columns, blocked-up windows, sham door-ways, rich carving in front, and a dead brick wall behind, should assume the name of classical architecture—that architecture which, no less than that of the middle ages, was constructed with reference to the exigences of the climate and the manners of the people. It is, I believe, a well-known fact, that the architect of the British Museum drew out his plan and erected the building without consulting any of the officers of the institution about the requirements of their separate departments; and consequently the interior arrangements have been arranged and re-arranged, and altered again at enormous expense, and the accommodation is still most inadequate and inconvenient. An instance of this kind tells more of the temper of the age than volumes of disquisitions. For an architect to behave thus, is to degrade his art, and still worse, it fosters the foolish notion that for a design to possess pretensions to beauty, it must also be inconvenient and expensive; and this prevalent notion has very much tended to discourage a taste for art among those classes where its encouragement was most needed. Any work of art is only valuable so far as it proceeds from the mind; and this qualification cannot be said to belong to those accumulated masses of parts, for which the reputation of highest artistic excellence is so boldly challenged. In a word, it would be well for us to remember the homely adage, 'Fine feathers do not make fine birds.' It is far better to have a simple and correct design than to borrow the most beautiful details, and to foist them on an ugly carcase. Consistency and truth require this at our hands, and it is the very foundation of all that is magnificent and noble in architecture. Detail should always be subservient to the general design, and not unduly exalted, at the expense of all symmetry and propriety: the neglect of such would seem to be the chief cause of modern failures. We have not learnt to distinguish as rigidly as we ought between what is essential and what is merely superadded ornament; and since this is the prevailing fault, we should combat it by every means in our power, and regard with jealousy all irrelevant ornamentation. The florid taste which has prevailed of late must be met and compensated for by proportionate severity, so only may we hope to preserve that combination of convenience and beauty which so admirably distinguishes mediæval art; and I have insisted more particularly on what is termed mediæval art, because experience has fully shown that in England, at the present day, we can adopt no other style than that which our forefathers brought to such perfection, unless we have recourse to most ludicrous expedients to soften down incongruities and discomfort. And it is the boast of England that in no other country did mediæval art reach such perfection. Westminster and Ely, Winchester and Worcester, when unmutilated by the spoiler, might safely defy all comparison. English embroidery was famed throughout Christendom; and Professor Cockerell has satisfactorily shown that the unrivalled sculpture of Wells was in the main the work of Englishmen, and that too, says Flaxman, 'two years after the birth of Cimabue, the restorer of painting in Italy: it seems to be the earliest specimen of such magnificent and varied sculpture that is to be found in Western Europe.' Shall we then import from distant lands and other climes unfitting ornaments and detail, whose individual beauty cannot compensate for their unreality? Shall we covet distant forms of beauty merely because they are not, and never can be, ours? Although we may mock their shape and proportions, and imitate their minutest graces, they will still be strangers in a strange land, and will plead silently indeed, but the more earnestly, and bid us repent of the neglect and contempt we have shown to the choice treasures we possess of native art."

CHURCH BUILDING NEWS.

Northampton.—It has been resolved to open up the tower arches of St. Giles's Church if a required balance of 150*l.* to make up the necessary expense be realized within the next six weeks.

Buckingham.—The foundation stone of the new church at the village of Akeley was laid on Tuesday in last week. The style of the church is Early English. It will have 250 sittings, with a small bell-turret. The total cost will be 1,500*l.* Mr. Tarring is the architect.

Eldersfield.—The church of this place has had various repairs and restorations effected in it within the last few years, including the renovation of spire, tower, and chancel, throwing open of arch, removal of gallery and of earth from walls, &c.; and the repair of north aisle and nave has just been completed. The pillars and arches which divided the nave and north aisle have been rebuilt, a new roof placed on north aisle, twelve pews removed, and sixteen new oak sittings erected in their place. In the nave all the oak sittings have been restored, five pews removed, and replaced by oak sittings. The sittings in nave have been appropriated to the poor. The repairs already carried out will cost 820*l.* In order to complete the restoration of the church, a new roof and south wall would be required to nave, and new pinnacles to tower.

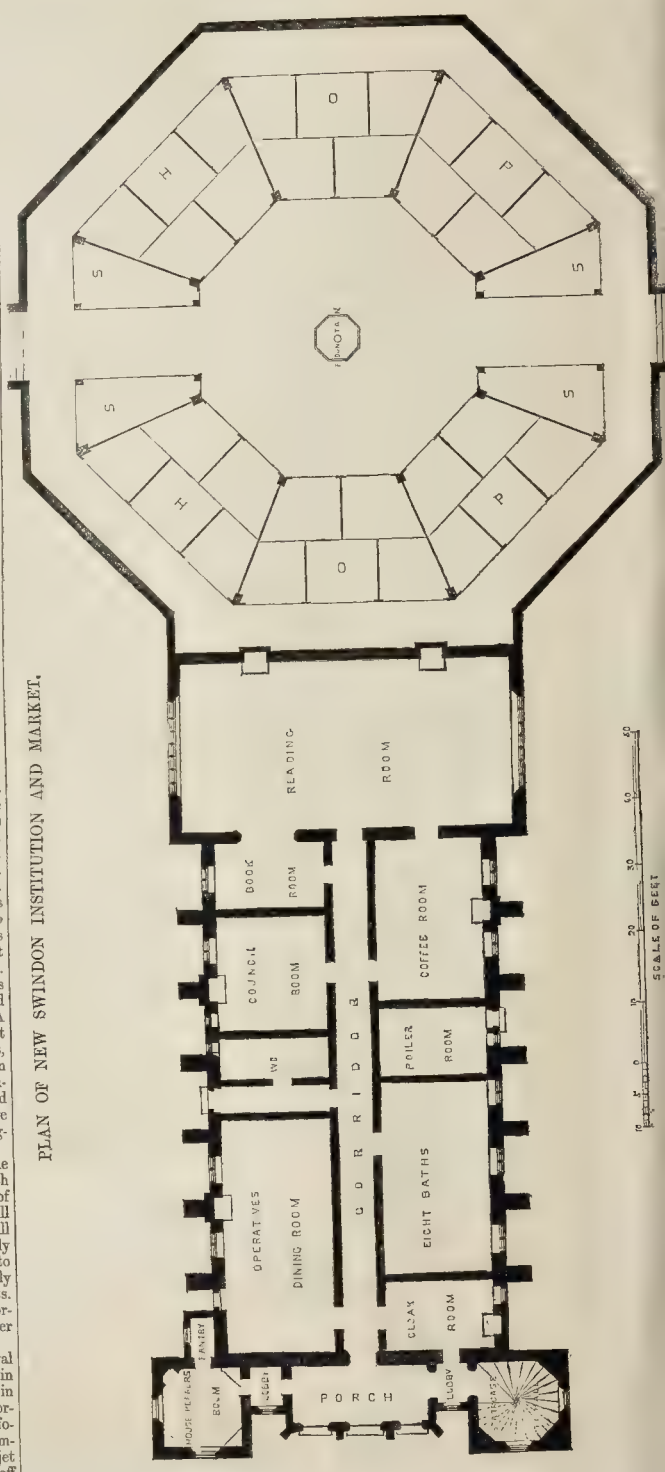
Amblecote.—The church of Amblecote, near Stourbridge, has been closed for some weeks, during which time, besides repairs of various kinds, there has been erected a stained glass window to the memory of the late Mr. James Foster, of Stourton Castle.

Manchester.—The new church at Collyhurst rapidly progresses towards completion. It has been constructed from the designs of Mr. E. H. Shellard, of Manchester, architect, based on examples of Early Decorated architecture. It is in the form of a Latin cross, comprising a nave 116 feet 3 inches long (inside measurement), and 27 feet 6 inches wide, intersected immediately in front of the chancel by north and south transepts, with galleries, each transept being 72 feet 9 inches by 26 feet 4 inches. The dimensions of the chancel are 26 feet by 20 feet, and 34 feet in height: the floor is raised 18 inches above that of the nave. The roof of nave is 43 feet high from apex to floor, and the pitch is about 50 deg. The building, according to the local *Courier*, is not exactly orthodox in respect to its aspects, as the site seems to have obliged the architect to dispose it some 40 deg. out of due east and west. On what is designated the north side, adjoining the chancel, there is the nucleus of a tower and spire, forming a principal entrance to the body and to the north transept gallery. This tower is 12 feet square, inside measurement, and has been run up to 18 feet 10 inches high, and then covered in, to remain unfinished, awaiting funds. It is to be 70 feet high from ground to finials decorating the top course, and above it a spire 70 feet higher. An arch has been formed on the north side of the chancel, 16 feet high, 10 feet 9 inches wide, and 4 feet 6 inches deep, the architect intending to lay a permanent floor from it over the interior area of the tower for the reception of an organ, and to arrange for a small choir in front. The roof is open-timbered, supported on stone corbels. The material of the roof and other woodwork is red Memel deal, stained and varnished. The seats are all open, with accommodation in nave and transepts with galleries for 1,078 persons, 415 free. A gallery at end of nave will hold 207 children, and the transept galleries 160 each. Externally the building is composed of parpoints with dressings of Yorkshire stone, from the Slaithwaite quarries, near Huddersfield: the stone for the internal work has been procured from the quarries of Sir Oswald Mosley, near the church. The site was presented by Sir Oswald Mosley. The building committee contracted with a firm in Manchester to erect the structure for 2,395*l.*; but from some default in the contract, the works were re-let to Messrs. Eaton and Hollis for masonry, at 1,295*l.* and to Messrs. Burton and Son, for woodwork, at 1,450*l.*—a total of 2,745*l.* and an increase of 350*l.*: in addition there were to be added for heating and gas apparatus, endowment fund (1,000*l.*), repairs, railing, extras, architects' commission, &c. 2,169*l.* forming a total of 4,764*l.* There is a deficiency of 1,615*l.*

Leigh.—Christ Church, Pennington, at Leigh, was consecrated by the Bishop of Manchester on Monday before last. It is in the late pointed style, and consists of a nave and aisles, a chancel at the east, and a tower at the west end. The entrance doorway occupies the base of the tower. The nave (which is higher than the aisles, forming a clerestory) is divided into six bays, each bay being marked by a buttress, and containing a large window: there are smaller windows with flat-pointed heads over those below in the clerestory. The chancel, which is divided into two bays, has a large window in the east end. The walls throughout are finished with a plain parapet. The interior of the church is 71 feet long by 50 feet wide. The

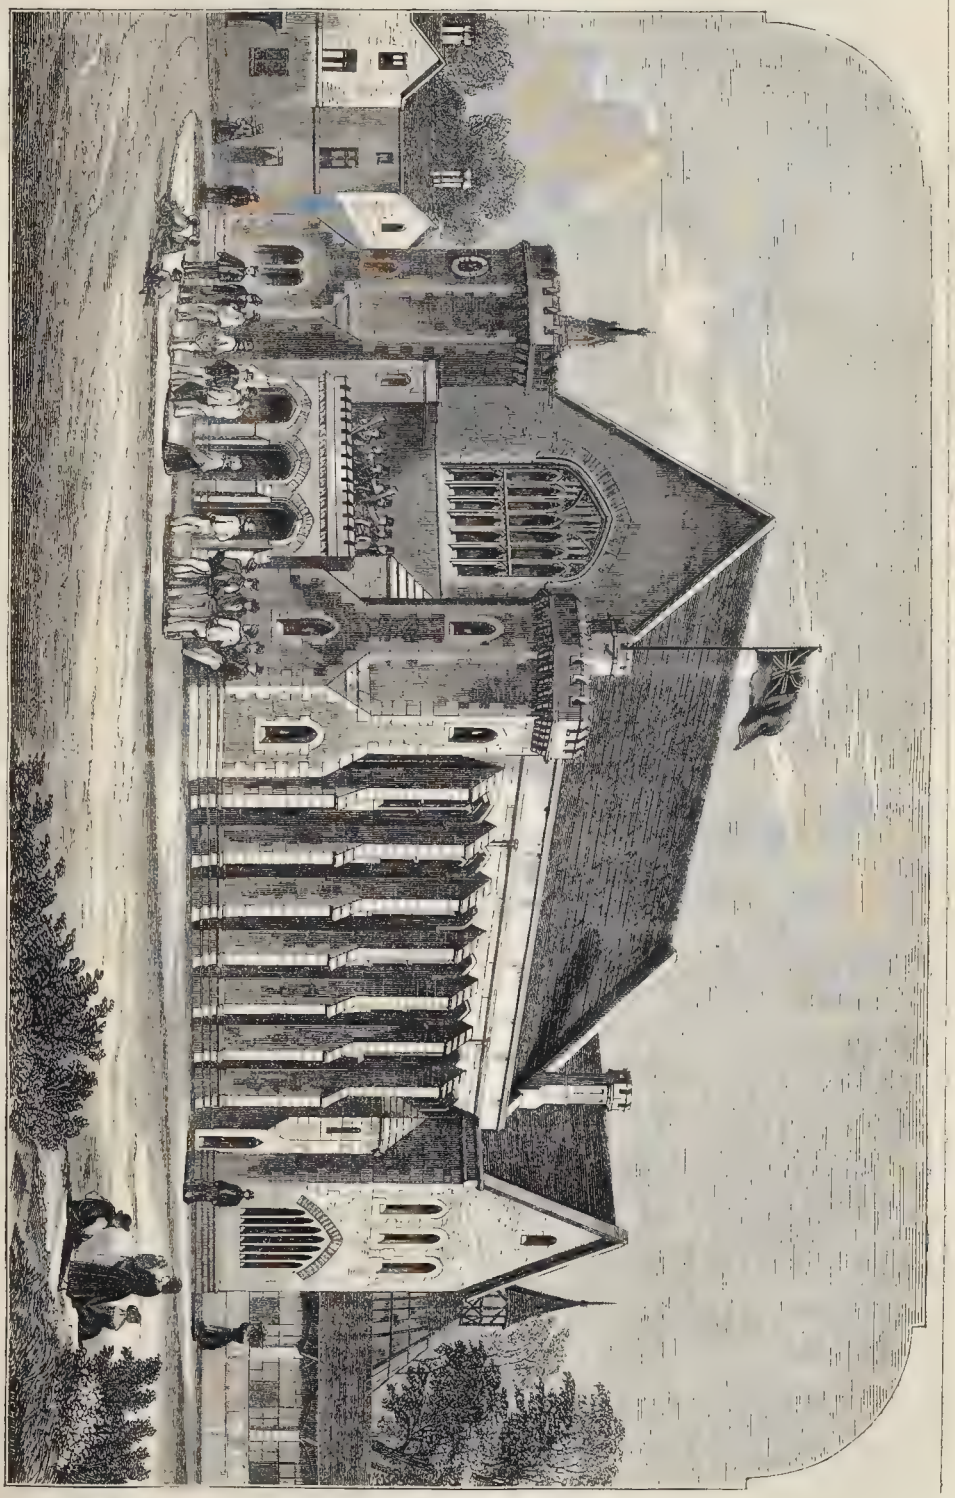
chancel is 30 feet long. The nave is separated from the aisles by six pointed arches upon each side, resting on stone piers. The pews and the timbers of the roofs are all stained dark, in imitation of oak. The children's gallery is placed at the west end, opposite the tower. The church is calculated to contain rather more than 800 sittings for adults and children. The contractor for the building was Mr. Mark Foggett, of Manchester. The architect was Mr. E. H. Shellard, of Manchester. The building committee have expended about 3,000*l.* in the erection and completion of the edifice.

Ringley.—The church of St. Saviour, erected about two years since at Ringley, near Bolton, from a design by Messrs. Sharp and Paley, of Lancaster, was consecrated on Saturday before last. It is capable of accommodating 560 persons. The style of this edifice is English Gothic of the thirteenth century. The building consists of a central nave and clerestory, 75 feet 6 inches long by 20 feet wide, divided from a north and south aisle, of same length, and 12 feet wide, by an arcade of five stone arches, and cylindrical piers and moulded capitals and bases; the height to ridge of roof being 50 feet. A chancel, 30 feet 6 inches long and 20 feet wide, projects eastward from the nave, divided by a lofty stone arch. A porch on the north side and buildings for the vestry and organ on the south side of the chancel, complete the general plan of the church. The nave and aisles are filled with open benches, constructed of red deal and stained. The roofs are all open, boarded, and framed with massive timbers. The exterior is simple and unpretending. A range of three narrow windows and bell turret are prominent features in the west front, the sides and east gable possessing little ornament besides the windows. The eastern window is a triplet, glazed with the painted glass that filled the east window of the ancient chapel. The building was superintended by Mr. E. G. Paley, and has been erected at an expense of about 2,000*l.*



NEW SWINDON INSTITUTION AND MARKET.

A FEW weeks ago we gave some notes of a visit to New Swindon, to see the first stone laid of a Literary Institution there, and we then promised a view of the intended structure. This we now give, together with a plan. The building is in course of erection by Mr. Streeter, under the superintendence of Mr. Edward Roberts, architect, and comprises, as we then mentioned, a market for thirty-two shops, and standings for thirty stalls. Part is under cover, with an octagonal roof 40 feet diameter, with a public fountain in the centre. On the lower floor of the main building there is a spacious reading-room, with book-room and coffee-room, or retiring-room, attached. A council-room, dining-hall with hot plates, hot and cold baths, and housekeeper's apartments, are included. There is a spiral staircase in an attached tower leading to the hall, which occupies the entire upper floor, with a gallery and screen at one end: at the other end is a stage for theatrical representations over the reading-room.



We may add to these particulars, that the buildings are entirely of Swindon stone, with Bath stone dressings. The interior will be of plain blue lias stucco: the roof of the hall will be open, the timber stained and varnished. All the woodwork, fir and deal, is to be simply stained and varnished (no paint excepting to ironwork), and all timbers, where constructively used, are to be visible, and treated as ornaments.

The ironwork is all to be wrought, for door-hinges and fastenings as well as for other purposes.

The architect is an advocate for the removal of the expired air *from the floor-line*, which in this building will be by forming an air-drain in each end wall, the bottom being below the floor-level, and admitting the air by occasional perforations in the skirtings. The air-drains communicate with a flue at each end, having a jet of gas, causing a sufficient current to carry off the heavier gases. There will, however, be moveable windows in the roof.

PLAN OF NEW SWINDON INSTITUTION AND MARKET.

NEW SWINDON INSTITUTION AND MARKET.—Mr. E. Roberts, Architect.

A NOTE ON PINK PAPER.

DEAR MR. EDITOR,—I want to say something to you, and I am sure you will listen, for the sake of my sex. There was such a *nice* ball at the Mansion House on Tuesday; Lord Mayor Sydney managed it capitally, he had taken pains,—

"And gadred him a meinie of his sort,
To leppe and singe, and maken wiche disport."

As a natural consequence, to take another line from old Chaucer (and I like Chaucer, though he is so hard to read),—

"Gret was the presse, and riche was th' array."

There were all sorts of uniforms, and Indian princes, and beautiful women in diamonds (oh! those diamonds, I am sure I had to keep saying "Thou shalt not covet," &c. all the next day), and a good band, and I had plenty of dancing, and the flowers in the vestibule were so pretty, and there were nice little nooks,

"For whispering lovers made,"

and everything was nice but one thing; and that thing was the air in the Egyptian Hall. Oh! the headache next day and the lassitude; simply and entirely for want of ventilation. Not one little hole could I see in the ceiling to take off the bad air produced by hundreds of lungs and thousands of lights. Do pray mention it to our Lord Mayor, and get him to do something; or perhaps Sheriff Wire, as he looks very good-natured, will interfere and provide for a supply of pure air next time.

As I have not quite filled my paper, I'm determined I will ask you why they don't decorate the walls and ceilings of the Mansion House? The plaster figures in the hall are charming, and there will be some of marble, I am told; but all the ceilings and the walls are so bare, and cold, and ugly, that they are quite dreadful to look at. I should like to grumble a little bit about Windsor Castle (do, pray, go and see the terrace and the park, they are delicious at this moment); but there is so much to do just now, that I have only time to subscribe myself, your faithful FAN. C.

PROVINCIAL NEWS.

Peasenhall (*Suffolk*).—A new foundry, saw-mills, &c. are being erected here upon the premises of Messrs. Smyth and Son, the drill manufacturers. The shaft is about sixty feet in height, with cast-iron cap, weighing nearly one ton. The roof is the largest one of timber in the neighbourhood. The engine is of 14-horse power, with two boilers. These already extensive works will thus give employment to a number of additional hands.

Lowestoft.—Plans, it is said, have been drawn and submitted for the erection of a police-station upon the London-road, with suitable rooms in which to conduct the magistrates' business of this district.

Yarmouth.—The new bridge will shortly be completed. It is of iron, built on the tubular principle, upon two stone piers, each 12 feet across. The space of waterway, in the centre, between the piers, is 50 feet, and on either side a waterway spanning, of 65 feet clear, has been left between the piers and the quay-head. Upon the platform the bridge has a carriage-way of 18 feet wide, with a pathway on either side of 4½ feet. The platforms over the side spans are covered with small blocks of wood-pavement, riveted together, and superficially covered with an adhesive composition of bitumen. Some weeks, it is said, will probably elapse before the bridge is opened, owing to a difficulty experienced in adjusting the balancing power of the two leaves; the iron balance or balances being, it seems, originally so adjusted, that when the leaves of the bridge are raised, the balances meet the surface of the water, when the difference of specific gravity is so great that it requires double the number of men to complete the raising; and again, in lowering, the pressure of the water is so great, that almost as much difficulty is found in getting the ballast *out* of the water. This, it is believed, will be successfully adjusted.

Olney.—The gas works are proceeding, the tank, and other buildings, as also the laying of the main pipes in the public street, which is nearly completed. The expenses of fittings and other works for the lighting of the church with gas, will, it is expected, be raised by subscription. The inhabitants have also agreed to a shilling rate for lighting the streets of the town.

Macclesfield.—Of the total amount subscribed for the establishment of the public park here, the working classes contributed, in pence, one-fourth as much as the corporation and government together. After great difficulties, the land was bought about eighteen months ago, and the operation of laying it out has now commenced, under the superintendence of Mr. Sturdy, from working designs by Mr. Barron, of Elvaston Castle, Derbyshire. The outline of the buildings has been prepared by Mr. J. F. A. Lynch, of Macclesfield, artist. The extent of the ground is about sixteen acres: it is at the north side of Macclesfield. In the foreground are the sloping banks which it is proposed to form into a public cemetery for the town, and a little to the left, the new grammar-school will be erected in the Elizabethan style of architecture.

Orleton.—The *Hereford Times* of last week records the laying of the foundation-stone of a new schoolhouse at Orleton. The building is to be of the fourteenth century style, and of red brick, with blue bricks worked in crossings and bands, and Bath stone dressings to the windows, doorways, and gables. The roofs will be of wrought open timbers, covered with blue tiles laid in ornamental courses. The porches, at the several entrances to the master's house and the school-rooms for boys and girls, will be of wrought oak with arches. There will be tracery to the doorways and windows. The architect is Mr. Cranston, of Birmingham.

Birkenhead.—Mr. Hornblower, architect, is preparing plans of new works to be built by Messrs. Fawcett, Preston, and Co. engineers, at Birkenhead. These works, which are intended solely for the boiler-making department, will extend over two acres of land adjoining the Canada works, on the margin of the great float, and are expected to be completed in August next. They will give employment to about 500 or 600 men.

Manchester.—The chief stone of the new day and Sunday schools, at Newton-heath, was laid on 8th ult. The new structure, which is to occupy the same area as the old schools, will consist of two stories, its length being about 90 feet, and breadth 30. There will be a lavatory on the basement floor, 30 feet by 18 feet: the boys' school, 54 feet 7 inches long, and 30 feet 9 inches wide; and the infants', 34 feet 7 inches, by 30 feet 9 inches, are on the ground floor, and are 15 feet in height. The girls' school is on the second floor, and of same dimensions as the boys', but 18 feet high in the centre: adjoining it are two class-rooms, 34 feet 7 inches long, and 15 feet 2 inches wide each. Attached is a residence for the master. The style is Elizabethan, Mr. Jas. Bayley, of Altrincham, architect, having furnished designs. Messrs. Hay, Nish, and McKean, of Manchester, are the builders.

Rochdale.—It has been determined to build a new church, at Pinfold, in the parish of Rochdale; and the contract of Messrs. Farrell and Griffiths, of Manchester, for 3,900*l.* having been accepted by the committee, the works are now proceeding; coincidently with which it has also been resolved to proceed with the restoration of the parish church, under the direction of the same architect, Mr. Joseph Clarke. Last year a noble offer was made by a layman to bear the greater portion of the expense, provided the parish would let the work proceed; but it having gone to a vote, the offer was lost. This year, however, better feeling comes to the rescue, and the works will proceed at once,—the parts requiring the earliest attention being taken in hand first. It is an interesting fabric, with portions remaining from the thirteenth to the seventeenth century. There is, however, a part screened off on the south side, in which a sham chapel has been made up, with incised stone, and monuments, brasses, &c. intended to represent an old family chantry.

Sheffield.—The town council have undertaken to complete the bridge at Neepsend with approaches by the end of 1855, owners of property having paid them 1,000*l.* towards the work. The bridge is to be 40 feet wide between the walls.

Rotherham.—An effort is about to be made here for the establishment of promenade and pleasure grounds on an extensive scale. The site chosen is in Moorgate. A design has been prepared by Mr. Blackmoor, architect, from which it would appear that it is intended to erect a hotel, form pleasure gardens, bowling-green, and cricket-grounds, with a grand stand, ladies' stands, and other conveniences of the most complete character. If the scheme be carried out in its entirety, the capital required will be something like 3,000*l.* which it is proposed to raise in shares. There is a strong feeling in the town that the undertaking will be successful.

Wigan.—The Local Board of Health are in treaty with several owners of land, for property required for the new waterworks, and only wait a loan to commence, working plans, &c. being prepared. With regard to the sewerage, greater progress has been made, though there is also as yet a want of pecuniary means. The Haigh Foundry Company has cast a quantity of iron piping, through which the sewerage is to be conveyed, across the bed of the Leeds and Liverpool Canal, near the pottery, to the outlet into the Douglas, and the pipes have been taken to the spot. It is intended to lay the piping upon strong timber sleepers, and fasten them at the sides with blocks of wood firmly riveted to the sleepers. There will be half a yard of puddle between the top of the pipes and the water. The Canal Company have consented to drain that part of the canal for two days, for the convenience of the workmen, considering the proposed diversion of the sewage as an equivalent.

Hartlepool.—Mr. Mason, the surveyor to the Darlington Board of Health, who was appointed by the Hartlepool Local Board to co-operate with Mr. Morris in the preparation of plans necessary for the development of a scheme of drainage, on the principle of the sewage being deodorized, has visited Hartlepool, and arranged preliminaries with the surveyor to the Local Board. In the course of a month or six weeks, it is expected, the plans will be ready for presentation to the General Board of Health for their approval.

DISTRICT SURVEYORS AND BUILDERS.

JERVIS'S ACT NOT APPLICABLE IN RECOVERY OF FEES.

A CASE relative to the non-application of Jervis's Act to the recovery of fees of district surveyors was heard before Mr. Traill on 12th ult. The proceedings were taken by the district surveyor of Lewisham against Mr. Adam, of the Hermitage, Blackheath, for an alteration of the main building, a dwelling-house, of the extra first rate, and related to stripping and re-covering a *portion* of the roof. The work had been commenced without notice, by inadvertence, and the builder was informed, on his request as to the fee to be charged as an item in his bill, that the sum of 1*l.* 10s. would be accepted in satisfaction of full claim of 2*l.* 10s. as prescribed in schedule L. This reduced fee was objected to by Mr. Adam when he settled with the builder, considering that no fee was due for such operation. The builder communicated with district surveyor accordingly, and as the works were completed early in the month of August last, and the claim objected to in March last, more than six months had elapsed. Notwithstanding, however, the bill for the full fee was delivered to Mr. Adam, and the receipt tendered; but he refused to pay, stating that proceedings might be taken against him, and he should resist. When the case was brought before the magistrate, and the matter *pro* and *con.* had been stated at length, and the reason why the proceedings had been so long delayed, the clerk of the court observed, that the surveyor was out of time (six months); but it was contended that, under legal advice, Jervis's Act on several grounds did not apply, and that, if necessary, it should be argued to that effect; but thereon, after some consideration on the part of the

magistrate, he expressed that, by the provisions of the Buildings Act the fees of the district surveyor were recoverable in manner as poor-rates; namely, by *warrant*, and not by *order* or *conviction*, as directed by Jervis's Act with respect to such cases as came within its meaning; but that if the party complained against objected to his view, or if the district surveyor desired a case for a decision of the superior court, he would give every facility for so doing, and that he would defer issuing his warrant until 20th ult. The complainant's case, it is right to notice, was conducted by a lawyer, and who again appeared on the adjournment, when he satisfied the full claim and costs, observing that the law, as held by the magistrate, was considered correct.

This is the fourth case decided favourably by the magistrates (Mr. Secker and Mr. Traill) on the subject of roof-stripping, &c. the first case (Mr. Brown's, Forest-hill, and the work executed by Benj. Paisey) was decided by Mr. Secker, and for the greater satisfaction of Paisey, it was conceded to him to take the matter before the official referees, who held it to be an operation under the Act, but considered the district surveyor to be entitled only to a special fee; in this view the registrar did not concur, and the case was ultimately determined by the Commissioners of Works, &c. in accordance with the registrar; viz. that the full fee for an alteration in schedule L is the proper fee.

A SURVEYOR.

CAST MARBLE.

IT has long been a desideratum in the adaptation of fine art to the refined wants of daily life, as well as for purposes of science, that works of sculpture should be capable of being produced at a cheap rate. Many processes have been tried to render plaster solid; but none has hitherto proved in every respect successful, the requisite degree of transparency not having been obtained.

Dr. Emil Braun has at length succeeded, we are told, in the production of a material adapted to plastic purposes, which affords the same sharpness of outlines as plaster of Paris, is scarcely inferior in whiteness to the finest statuary marble, and even surpasses it in impermeability of surface, being perfectly impervious to wet, and capable of resisting all inclemencies of weather. The inventor has already exhibited several busts and statues of this composition, which have been viewed by the sculptors and artists of Rome, who are unanimous in their opinion as to the beauty and value of the material, the fracture of which even presents a crystalized structure.

This material is as well adapted for the most delicate objects as for works of colossal size; the former exhibiting the utmost refinement of execution, whilst the latter proves that it is capable of resisting any degree of weight arising from the bulk of the objects themselves.

In this material fac-similes of the most beautiful monuments of ancient or modern times, architectural ornaments, &c. may be reproduced at a price not greatly exceeding that of plaster casts. Thus not only houses and museums, but also gardens and parks, and all open court-yards or spaces destined for decorative purposes, may be adorned with the finest works of sculpture which the world affords.*

CAUSE AND EFFECT.

IT may be worth while to state that since the articles on the neighbourhood of King's-cross appeared, the cesspools in Weller's-court and in "Paradise-row" have been removed, and the closets drained. Mr. Sutherin, the district surgeon, states that since this has been done he has been called comparatively seldom into the houses. In Ashby-street, and other streets where the drainage is unaltered, he has still no rest.

About ten days ago we made an inspection of the neighbourhood, and saw with regret that in Weller's-court, where matters had been improved, two of the closets had been filled up with stones and other rubbish, put in, it was said, by the children. The other day one of our co-adjutors called again at Weller's-court, when the closets were overflowing, and the smell most offensive. Several women who live adjoining complained of the place, and regretted that after pains had been taken the work should have been thus destroyed.

"Is any one ill?" he asked.

"Yes, sir; a little girl is dying there, pointing to *a window immediately above the two closets*. She had been ill about a week, and was then sinking from an attack of typhus fever.

When thus examining the place, Mr. Pugh, the curate of Old St. Pancras, who has not only done his utmost in endeavouring to improve the sanitary condition of the large and poor population under his care, but has also been unremitting in the duties of his own office, was met, and together they visited the apartment in which the sick child, about ten years of age, lay on a ragged-looking bed on the corner of the floor. The clergyman knelt on the floor of this abode of poverty, and prayed: it was a scene of which a great painter might make an impressive and instructive picture,—the kind-hearted clergyman, the mother, and those who had come to see her in her trouble from almost equal destitution, on their knees; the dilapidated walls, the pale countenance of the insensible and dying child, while the sun found its way through a cleft in the adjoining buildings, setting gloriously, and throwing a stream of light upon the closing scene of a short life.

CAUTION TO CONTRACTORS OF SEWERS.

IN the Court of Common Pleas, an action to recover damages was brought by Mr. Walton, a law reporter, against Mr. Dethick, the contractor to the Commissioners of Sewers; and the issue forcibly indicates the peril which builders subject themselves to, as well as the danger to the public, by not taking precautionary measures with their materials left within reach of the public.

It appeared in the case, that Mr. Walton, whilst walking along King Henry-street, Ball's-pond, fell over a scaffold-pole left by one of the contractor's men, and broke his leg so badly, that the bone protruded through the skin, and it was five months before he could get about his business; and for damages so sustained 223*l.* were claimed.

It was not denied, on the part of the defendant, that the pole had been left by one of his men; but counsel urged that as the accident had been caused by one of Mr. Dethick's workmen, the master was not liable, but the workman, if any one, were, through the negligence.

Lord Chief Justice Jervis held that the evidence adduced was sufficient to go before the jury as to defendant's liability; and the jury found a verdict for the plaintiff—damages 200*l.*

This verdict, with the costs, will not entail much less cost on Mr. Dethick than 400*l.*

WORKMEN.

Breach of Contract.—At Hammersmith, last week, a working brickmaker was brought before Mr. Beadon on a warrant, charging him with having unlawfully absconded from the service of Mr W. Sellins, with whom he had contracted to work as a moulder during the current season. The defendant, after obtaining a loan of 4*l.* from his employer, had left his service, and contracted with another master. The magistrate committed him to prison for two months, with hard labour, after hesitating whether it ought not to have been three in place of two.

Pawning Workmen. The relations between masters and workmen at Sheffield, as we last week indicated, are, in general, very far from what they ought to be. In allusion to this subject, a Manchester paper describes a practice which he calls "pawning workmen." It is thus managed:—A clever, but probably dissipated man—a good file-cutter for instance—contrives to get into debt with his master, say to the extent of five pounds. Then, finding some other person willing to employ him, he "pawns" himself to that person for the five pounds which he owes, and an additional sum of probably five pounds more; then changes his employment on like terms again and again, so long as he can obtain an additional advance as an inducement to leave his employer. In this way, many of the cleverest workmen in Sheffield, it appears, are, or were, in a state of *quasi* bondage to their employers for advances generally spent in riot and dissipation; and of course the usual result is, that the man absconds and the last employer loses his money.

Piecework at the Crystal Palace.—Upwards of forty mechanics, lately employed at the Crystal Palace, under Mr. Myers, attended at Lambeth police office last week to hear a decision in which they were all equally interested. The case was that of one of the men who summoned Mr. Myers for 6s. 6d. for two half-days' wages. The defence against the claim was, that complainant had been paid for five hours on the day of the opening of the Palace, and five hours on the Monday following, and that being knocked off at the end of the five hours, and only working five hours on the second day, he was not entitled to the sum claimed. It was also shown that the general practice at such jobs was that of paying by the hour, and that the workmen were at liberty to leave off, or the employer to knock them off work whenever they pleased, without notice. Mr. Elliott, under the circumstances, dismissed the complaint.

SYPHON WATER SUPPLY.

WITH reference to the observations in your last number under the above head, an experiment came under my notice which may be interesting to your correspondent.

A few years since I was obliged to raise water a height of 10 feet, in order to remove it from a stone quarry. Adjoining the quarry was a railway cutting, on an incline of 1 in 100. I determined to attempt the removal of the water by means of a syphon, and with this view I laid down 1,200 feet of 4-inch iron pipe, by which I obtained a fall of 14 feet. The pipe was well laid, and so arranged that it could be easily filled with water, which being done, both ends were opened simultaneously, and the water immediately flowed in a considerable stream, and continued to do so for twelve hours, after which it obviously slackened, and, in consequence of an accumulation of air in the pipe, it was found necessary to refill it *every day* in order to keep it efficient. If left for four or five days the flow of water almost ceased, but it never quite stopped. No flaw in the pipe could be discovered, and it was the opinion of engineers whom I consulted that the air which accumulated in the pipe was evolved by the water passing through it. The results did not vary during the three years the syphon was in use.

If such be the usual action of syphons, it shows that while they may be very useful in certain cases, they would form a very troublesome mode of obtaining a permanent supply of water. B. C.

ARCHITECTS' BILLS.

AT the Derby County Court, on 12th ult. a special court was held for the trial of a cause brought at the instance of Mr. George Hall, of Derby, architect, against the Rev. Mr. Poole, incumbent of Alvaston, and Mr Charles Holbrook, churchwarden, who appear to have acted with others as a committee, for effecting certain alterations in Alvaston Church. The action was brought to recover 30*l.* for preparing plans, specifications, and estimates for restoring the church. The defendants paid into court 15*l.* and costs.

The plaintiff gave evidence to show that he was employed by the defendants, and prepared plans at their desire, which were submitted to them, together with estimates, &c. and that at one meeting six guineas were given to him for his time up to 7th September last. He also stated that he received full instructions to carry out plan No. 2, and he was frequently urged to get on with the plans and advertise for tenders. At a subsequent meeting, Lord Harrington, in the chair, Mr. Wilson, a pupil of plaintiff's, who was sent with the plans and estimate, brought back from the meeting a plan of the tower selected, and also a note from Mr. Poole, authorising him to advertise for tenders. The bill for advertising was 1*l.* 9*s.* On the 23rd November, plaintiff received orders to attend a meeting for the opening of the tenders: three were sent; one from Mr. Charles Moody, one from Mr. George Thompson, and one from Mr. Edwin Thompson. The tenders were opened and were considered far too high, and it was proposed to wait for the opinion of Lord Harrington. Plaintiff was told that the plans were sent to London and other places to obtain the tenders for building. Previous to 1st March Mr. Henshaw and Mr. Hollingworth called at plaintiff's office and left the plans: they called again on same day, and stated that they had been requested to call by a meeting held at Alvaston, to ask what plaintiff should charge them if no work was done: they said the cost would be so far beyond their funds that they could not possibly carry it out. Plaintiff expressed regret, and offered to make fresh plans to meet their funds, sinking all claims for what had previously been done; or that they should pay a certain amount on account, and the works to remain for twelve or eighteen months, until they could turn round. Plaintiff went on to state, that requiring time to consider as to the amount to be charged, he delivered his bill on 17th December,

* Dr. Braun is understood to be engaged in writing an introduction to archæology, beginning with an analysis of the finest fanes of Greek architecture.

stating that his charge would be 25*l.* if the bill was then paid. From that time he heard no more of it until 1st March, when the committee again waited upon him. Mr. Hollingworth and Mr. Holbrook left the plans, and he then said his charge would be 30*l.* A few days afterwards Mr. Holbrook stated that the committee were disgusted with his extraordinary charge, and that they did not consider they owed him 1s. as the work was not carried out. Mr. Holbrook said the committee had agreed to give 15*l.*; but plaintiff refused to take it, and Mr. Smith offered 20*l.* Plaintiff replied that having made the charge he would maintain it. The usual charge of an architect was 5 per cent. and expenses incurred in travelling. The lowest tender was 1,090*l.* which was ultimately altered to 1,000*l.* Plaintiff's estimate was for 800*l.* for the whole of the work. There was afterwards a considerable rise in building materials. The 30*l.* charged was a nominal one to meet the case.

Mr. Stevens, architect; Mr. Gisborne, engineer; Mr. E. Thompson, and Mr. C. Moody, considered that the charge was a reasonable one.

The Rev. E. Poole, as one of the committee and a defendant, said that when the committee first saw Mr Hall about the proposed improvements, they stated that no more than 400*l.* could be raised, and asked him to give them sketches only of the proposed alterations, as they did not want any drawings; that, of the plans submitted by Mr. H. No. 2 only was agreed to, and the costs of the work, according to that plan, Mr. Hall estimated at 426*l.* and said he could guarantee to find a respectable builder to do the work for that sum. Mr. Hall was then desired to advertise for tenders for plan No. 2, and also for the tower and roof. The tenders were rejected at once, the lowest for the transepts being 665*l.* and no work was done, and the plans had not been of any use; that he did not recollect Mr. Hall offering to make other plans; and upon cross-examination that he saw the plans, and inspected and approved of them, for 426*l.* outlay. —Mr Holbrook corroborated the evidence of Mr Poole, and further, that the estimate of 426*l.* was without the tower, &c.; and that for all the proposed alterations the plaintiff estimated the costs at from 700*l.* to 800*l.*; that the committee thought the plans too expensive, and that Mr. Hall said that he did that for his own credit.

The Judge, in summing up, said that the question really for consideration was, whether the claim was a fair and reasonable one.

The jury, after a short consultation, found for the plaintiff for the amount of his claim, namely, 30*l.* Judgment was then entered for that sum with costs, to be paid forthwith.

MANUFACTURE OF BELLS.

A PATENT has recently been obtained for "Improvements in the manufacture of large bells." The so-called improvement is stated thus:—"In place of making a temporary bell of loam and other matters on the core, . . . we construct the outer mould without the aid of such temporary bell, . . . and we produce the outer mould by using a hollow iron casting, perforated with numerous holes, and having its exterior form corresponding generally to the intended bell. By the aid of a template, rotating on a central axis within the mould, this is made to assume the form for producing the correct exterior form of the bell." Now, so far from this being a novelty, it has been in use from time immemorial. So far from being an improvement, we have uniformly discarded it whenever we have required that degree of accuracy which results from perfect parallelism of the inner and outer surfaces of the bell; or, in other words, from the inner and outer surfaces being throughout concentric. It is nevertheless a convenient and rapid process for such work as only requires neatness of appearance; and we have therefore commonly adopted it in our less important or less accurately toned bells, and we should wish to use it for such work as hitherto. Are we forbidden to continue our old practice because a patent has been obtained for it by another firm, young in the art, as an "improvement in the manufacture?" Z.

*** Certainly not.

PROPULSION BY STEAM-WORKED OARS.—Mr. Wm. L. Anderson, of Norwood, has secured a patent for propelling ships by paddles constructed somewhat similar to the principle of the oar for rowing by hand. The blade of the paddle is diamond-shaped. The arm passes through the ship's side, where it is furnished with a ball-and-socket joint. The paddle-arm is carried round by the action of a crank, and while turning in its socket, it receives such a motion through the intervention of a guide-rod, as causes the blade to "feather" as it emerges from the water. Whether such a mode of propelling large vessels would be any improvement on the screw or even the usual paddle, is yet to be tested.

LODGINGS FOR THE POOR IN WESTMINSTER.

WITH reference to the Westminster improvements, what is to become of the poor people turned out? Whither are they to go? Let us take a few instances. The great street now in rapid progress from the Abbey to Victoria-road, namely Victoria-street, certainly one of the finest streets in the world, has for its purposes laid desolate numbers of houses inhabited by the poorer class, and of course as the buildings progress must demolish many more, such as Orchard-street, Old Pye-street, Great Peter-street, Dacre-street, New Tothill-street, Brewer's-green, Strutton-ground, &c. all of which are at all times the scenes of horror, debauchery, and squalid misery, teeming with the most foul and loathsome stenches, and in fact such as you have described to your readers in the pages of your journal under the head of "Homes of the Poor," but certainly to my knowledge subject to more vice than you have mentioned, and this too under the nose of royalty,—connected with York-street, and not a stone's throw from the palace. And now passes the Thames Embankment Railway Bill, to demolish 400 or 500 more houses west of Regent-street,—and again occurs the question, "Where are the poor to be housed?"

It will be said, if Westminster is such a hornet's nest, it is quite as well to pull down the houses and scatter to the winds the hornets; but there are honest workmen among them, who pay their way and take up their abode here for cheapness in accordance with their means,—and whither are they to remove with their work hereabouts?

How requisite is it, Mr. Editor, for the "Westminster Improvement Commissioners" to erect homes for the poor in the shape of model lodging-houses, such as are built on Prince Albert's plan at the east end of London? There are many who would willingly lend their aid and capital in its undertaking. Let some enterprising men mix with the people themselves and learn their wants before they put forth a plan and fall into such errors as generally follow such undertakings. Give the people utility blended with ornament, for they should both go hand in hand for the refinement and care of the working classes, to beget an improvement in their social and moral condition. W. L. G.

Notices of Books.

Household Chemistry; or, Rudiments of the Science applied to Every-day Life. By A. J. BERNAYS, F.C.S. Third edition. Sampson Low and Son, 47, Ludgate-hill. 1854.

THOUGH not offered as a class book to regular students of chemistry, but intended for the tyro in that science, and for use as a school-book, this little work has a better title, in its merits, to the attention even of students, than some with higher pretensions. The present edition is considerably enlarged, and the whole forms a decidedly good and popularly-written introduction to the ever-varied and interesting science of chemistry, especially as regards its more ordinary manifestations, in pantry and parlour, in kitchen and cupboard, in cellar and dairy and garden.

The Ten Chief Courts of the Sydenham Palace. Routledge and Co. Farringdon-street.

THIS little shilling volume of discursive but pleasant reading is not intended to supersede the company's catalogues, and indeed is not well suited to such a purpose. "It is a book to read," says the preface, "before going to Sydenham, while going, or during the return: it is a book for the chimney corner and the railway carriage, and may be even perused to advantage while resting in the gardens of the palace or during the necessary intervals of sight-seeing." It wants point.

Masters' Ready Reckoner. Seventh edition revised and improved, with additional tables. By JOHN HEATON. London: Routledge and Co. 1854.

WHEN a book has gone through seven or eight editions these are its strongest possible recommendations to notice. The present editor has, it appears, carefully inspected the whole of Masters' well-known work, and added tables of interest, commission, wages, per-centage, and profit, time, weights and measures, to the other tables of prices, &c. of which it was before made up.

Miscellanea.

LONDON SQUARES.—We always pity the gouty lilacs and consumptive privets that keep guard in these lonely places, whose grass and gravel seem nearly of the same colour, and scarcely show the line where one should terminate and the other begin. We have heard of green leaves all turned yellow, but after June the leaves are all black. They are the picture of melancholy. Why not pay a gardener adequately to keep the borders filled with decent-looking flowers, and give him one of Reed's engines to wash off the soot? A good deal may be done towards rendering these miserable plant cages more sightly. Look at the Temple-gardens, in the midst of waterside factory chimneys vomiting black smoke, yet always kept as clean and as bright as a new pin. Nursery-maids and children can walk about there as free from dirt as if they were in the country, and all this for the difference of a few pounds a year to the gardener. *-Horticultural Journal and Farm and Garden Advertiser.*

TYNEMOUTH PRIORY.—Care has of late been taken to remove all nuisances from these ruins. A shallow trench, about 5 feet wide, has been carried round the western portion of the building; while other footpaths have been neatly laid out in various directions, and covered with suitable material to form a hard surface; the whole affording great convenience to parties viewing the ruins. St. Mary's Chapel, after many years of neglect, has been cleared of its lumber, cobwebs, and dust, and rendered available for burial services. This chapel consists of an oblong square room, 18 feet in length, 12½ feet in breadth, and 10 feet in height, from the spring of the roof. It has one open window, and two blank ones, on the north side, three open on the south, and a circular one at the east end. The mullions and tracery of all the windows have been entirely renewed, and, excepting one, their present glazing is only temporary, for the whole are designed to be finished with stained glass. The roof is arched, formed by groins springing from the capitals of the columns between the side windows, and in the angles of the chapel. The principal intersections of the groins are united by carved circular bosses, of large and smaller sizes, extending in three rows from east to west. There is a niche on each side of the east window, in good preservation; and above which are figures carved on the wall. Below the niches are two closet-like cavities, supposed to have been used as receptacles for sacred utensils, and a small niche in the south wall apparently to receive a basin with consecrated water. The main floor is laid in mosaic work composed of tiles 4 inches square.

POTS FOR LICENSED VICTUALLERS. — In the *Builder* of the 24th of June there is an article on ferro-vitreous porcelain. Thinking it might be made useful for licensed victuallers, in the shape of pots and measures, I would suggest the same, as I am certain, if made serviceable in this respect, it would be largely used. It should not be too expensive, and much would depend on the design. I am myself a victualler of twenty years' standing, and feel the want of an article that could not so easily be melted down. A. B.

REDEMPTION OF GROUND RENTS.—Whilst agreeing with your correspondent, "F. C." on the necessity of every facility being afforded for the redemption of ground-rents, I cannot go the same length as he does, in urging a legislative enactment for effecting that object. An Act of Parliament dictating to landed proprietors whether they should sell or lease, would not be exactly in consonance with the feelings of a nation who have long held that every Englishman's house is his castle. The first fruits must check the present impetus that has been given to the building trade, who have had to meet the wants of a population that has increased, is increasing, and will increase. Here in England we have, in the last decennial period, increased two millions, and erected a quarter of a million of houses. Take, for example, any of the suburbs of London. There is Islington with 56,000 souls in 1841, and in 1851 we find 96,000. There is the county of Middlesex, with its increase of half a million, for whom fifty-five thousand houses have been erected in the same period of ten years. And with all this additional house accommodation, there is one healthy sign apparent throughout England, and that is the list of uninhabited houses shows a decrease of 20,000. Of this number, Middlesex alone claims 6,000. In the face of these population returns, is it discreet to ask Parliament to pass a measure that would tend to keep building land out of the market? As it is, there are impediments enough in the way of obtaining what are termed eligible plots? Besides, an appeal to the Legislature in such a matter is neither more nor less than asking for a repeal of the celebrated statute *de donis*, passed in the reign of Edward I. which allowed landed proprietors to entail their real property. E. R.

A NEW BRICK-MAKING MACHINE, recently patented in America and Europe by Messrs. Sands and Cumming, of New York, and introduced here by Messrs. Nourse and Co., of Cornhill, is thus described by a contemporary. In this apparatus the clay is tempered and the brick moulded at one operation, and it may be operated on by steam, water, or horse-power. The brick-frame contains six moulds: it is placed with a moveable pallette-board, on a sliding table in front of the machine: the machinery is then put in gear: the table passes under a series of rectangular funnels, through which the clay passes into the moulds: a stamp descends, pressing them with great force, by which all superfluous water is expelled: the sliding table, with the bricks, again makes its appearance outside, from whence the latter are carried away to be stacked. This is all effected in one revolution of the centre vertical shaft, on which are four blades, set spirally, to act as a screw in forcing down the clay, and four horizontal knives for dividing and kneading it. The pressure can be regulated so as to render the machine suitable for every description of clays. The inventors are practical brick-makers, of thirty years' standing. Their machine, as compared with other more complicated machines, is said to be economical in first cost, and in its working rapid and effectual: it tempers, moulds, and presses the bricks in one operation, and can turn out from 14,000 to 17,000 bricks in a day of ten hours by the united labour of two men and two boys, being equal to from twenty-four to twenty-eight a minute.

IMPROVEMENTS IN FARMING.—Mr. Edward Wilkins, of Walworth, has been making experiments at Wokingham, in which, by means of introducing liquid manure and atmospheric air directly to the roots of corn or other plants, through tile drains, he has obtained results surprising, it is said, in rapidity and luxuriance of production, and on very poor soil. The drains are semi-cylindrical, with the flat side uppermost, and perforated so as to allow the contents to rise to the roots, whether by capillary attraction or hydraulic pressure. The soil stands above these drains about a foot in depth, and the drains are placed about 3 feet apart. The seeds are sown directly over the drains, which can be supplied with liquid manure from a tank reservoir. Mangold wurzel thus grown is said to have weighed 9½ lbs. whilst that grown as usual had only acquired a weight of 2½ lbs.; and even with the mere access to air thus afforded, the effects on various crops are said to have been very striking.

ST. ALBAN'S ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.—The annual meeting of this society took place in the Assembly-room of the Town Hall, St. Alban's, on Thursday in the week before last. The walls were hung with the society's collection of brass rubbings and drawings; and collections of curiosities, coins, &c. were displayed on tables in the room. The anniversary was on this occasion a joint meeting of the St. Alban's and Bedfordshire Archæological and Architectural Societies. The Earl of Verulam, the president, occupied the chair. Several new members were elected and other business transacted, after which the Rev. J. Taddy read a paper "On the Condition, Local and Political, of the Ancient Britons," and Mr. R. Grove Lowe, one on "The Second Battle of St. Alban's." The majority of the visitors then proceeded to King Edward the Sixth's Grammar School, to witness the public distribution of prizes to the scholars of that establishment.

LECTURE ON THE MANUFACTURE OF IRON.—Mr. Samuel Blackwell, of Dudley, ironmaster, delivered a lecture at Sheffield, on Wednesday before last, on the manufacture of iron, the subject being illustrated by diagrams. The lecturer having premised that he should not pretend to do more than communicate some very elementary information as to the change which the ore undergoes before it appears in the market in its perfect form, said there was a vast amount of mystery connected with the iron manufacture, which ought not to be, since we were so intimately connected with it, the national greatness being in part founded upon it, and the facilities for practical acquaintance with it being at our doors. The abundance of the ore in our island, and the readiness with which it can be converted into metal, formed the basis on which all our branches of industry rest. It was calculated that directly it gives employment to about 250,000 hands; and the mental activity it calls forth, and the capital it absorbs, render it still more worthy of the study of all interested in human progress.

NEW NAIL-MAKING MACHINE.—There has recently been set to work at Troy (U.S.) a machine for making cut nails, the peculiarity of which is said to be that it is self-feeding, and will manufacture in a given time about twice as many nails as by any other known process, and that one man (as it is claimed), with a boy, will operate ten machines. There is a waste of only about a quarter of an inch in 10 feet. One machine will manufacture from 300 to 350 nails a minute, all perfect in form and finish.

NEW CANAL AT DROITWICH.—The formation of a new canal (to compete with railways too) is now a somewhat notable event. By the end of August, the Droitwich Junction Canal, which unites the town of Droitwich with the Birmingham and Worcester Canal, will, it is expected, be open for traffic. The Birmingham and Worcester Canal Company's engineer, Mr. R. Boddington, was employed by the Droitwich Junction Canal Company to carry out the work, and the new canal will be fed from the Birmingham and Worcester Canal. Its entire length is about one mile and a third, but in consequence of a difference between the level of the Birmingham and Worcester Canal at Hanbury Wharf, and the level of the Salwarpe at the point of junction, six locks were necessary, the fall being upwards of 64 feet. These locks are built in brickwork, with massive stones for holding the centres upon which the gates hinge. The necessity for economising the water has led to the introduction of a side-pond to each lock; by means of which something less than half a lock-ful of water is saved on the emptying of each lock. On the Regent's Canal the same end is gained by making the locks double and placing them side by side. The cost of the new canal will, it is said, be about 25,000*l.*

THE IRON TRADE.—While one authority declares this trade to be "in an *un*usual state of excitement," and "2*l.* per ton as more likely than 1*l.* to be the advance" at the ensuing quarterly meetings, another intimates that the assertion that large iron firms in the Staffordshire district have raised, or have decided upon raising, their prices even 1*l.* a ton, "is quite unfounded." The former, too, admits that "by many of the masters and merchants a rise of prices at the present moment is deprecated, in the face of a war of at least doubtful duration, the exchanges of late being rather against than in our favour, and the price of iron in Wales being infinitely lower than in Staffordshire." Another again declares that it is the small masters (whom, by the way, they always used to blame for keeping prices down and underselling the great masters), who are urging up prices; while the latter get the credit (or discredit) of it in other quarters. It is evident, on the whole, that the counsels of the trade are even more than usually divided at the present moment.——Mr. J. H. Johnson (for a correspondent), has provisionally specified an improvement in the manufacture of malleable iron, which consists in twisting a number of bars singly, and afterwards faggoting them together, so as to be welded or rolled in the ordinary manner. Other metals may be similarly treated.——Several experiments on the preservation of iron from oxidation and decay having been made by the Rev. N. Callan, of Maynooth College, he has found that an alloy of tin and lead, or of tin, lead, zinc, and antimony, is the most effectual. He is said to recommend that the alloy should contain at least as much lead as tin, but not more than seven or eight parts of lead to one of tin, the iron being treated with this composition just as it is usually coated with tin. Iron coated with this alloy, it is said, will answer all the purposes for which sheet lead, lead pipes, or zinced iron are employed. The addition of a small portion of zinc hardens the coat, but diminishes the power to resist corrosion; while a little antimony hardens it, and increases its anti-corrosive powers.

THE TIME TO PAINT.—A correspondent of the *Cambridge Independent Press* writes:—"As a practical man, I am really astonished to see the mania exhibited for *outside painting* at this inappropriate season of the year. I presume there are two objects in the use of paint—decoration and preservation, both of which are entirely defeated by painting in the months of May and June. I have proved, by practice, that woodwork painted in October looks better at the end of four years than if painted *in June* it would in *two!!* The heat of the summer's sun completely extracts the oil (the only portion of paint which nourishes and preserves the wood from decay), before it has time to penetrate below the surface: if judiciously applied in the autumn, it accomplishes the object—*preservation*, and preserves its body and appearance a much longer period."

THE OPENING OF CANNON-STREET WEST INTO ST. PAUL'S-CHURCHYARD.—The Common Council Committee have withheld the adoption of any measure for letting the vacant space at the south-eastern angle of St. Paul's-churchyard pending the application of the Royal Institute of Architects to Government for funds to repay the Corporation the estimated value of the ground for building purposes.

SOWERBY BRIDGE TOWN HALL.—We understand the committee of shareholders in this undertaking have awarded the premiums for the best and second best design for the intended Town-hall to the following parties, viz.—1st prize of 25*l.* to Messrs. Perkins and Backhouse, of Leeds; and 2nd prize of 15*l.* to Mr. Alfred Taylor, son of Mr. Taylor, wharfinger, of Sowerby-bridge.

A CALCULATING PRODIGY.—Extraordinary accounts are given of the calculating powers of a little girl of eight or nine years of age, the daughter of a shoemaker at Darvel, near Ayr, in Scotland, who almost instantaneously calculates such sums as,—in 1800 years, how many moments? In 1,800*l.* how many farthings? In 24,000 miles, how many inches and barleycorns? In 98 acres, how many square inches? The editor of the *Ayr Advertiser* has inquired into the truth of these accounts, and testifies, on the evidence of the girl's teacher, to the truth of them all, and of much more to a like effect, such as the multiplication of 123,456,789 by 987,654,321 in half a minute.

USE OF WATER FOR PROPULSION AT SEA.—Mr. Michael Dunn has issued a tract on this subject at Cork (P. Dennehy, Old George's-street, publisher), in which he gives an account of some experiments designed to afford a power to enable mariners on the eve of shipwreck to clear the point of danger by means of water as a propelling power, to be drawn up, through manual or steam power, by help of some engine such as the centrifugal pump, not from the bows of the vessel, but from near the rudder, and expelled at each side of the rudder itself. We do not see, however, how he disposes of the implied objection to the use of the screw itself, which might just as well be fitted up at once as any other machinery where steam power is to be put to use. It may be a very fair question, however, apart from any mere impromptu use of such means on the eve of shipwreck, how far Mr. Dunn's project may be advisable in reference to either screw or paddle; but that does not appear to be the ground on which he chiefly urges it, and he wants "neither patent nor money," but simply to direct attention to some mode of lessening the loss of life and property by shipwreck.

SOAPSTONE.—A new building material is coming into notice in New York, which promises to supersede everything else. This is steatite or soapstone, either in its purest state or in combination with other rocks. Its common qualities are perfectly familiar. It is so soft that it can be cut with a chisel, planed, bored, sawed, or turned in a lathe. Yet it resists pressure very well indeed, particularly when mixed with the harder ingredients, such as hornblende or serpentine. In beauty it is often found equal to marble, with even a greater variety of appearance. It bears an excellent polish, and, if broken, can easily be mended, by using its own powder as cement, so nicely as to be detected only by a critical examination. A house of this material was built at Northampton in 1807, and it is said to be still standing fresh and clear, to all appearance as if it had encountered only the rains of our last watery spring. The stone may be heated to a white heat, and then gradually cooled, or plunged into cold water at the option of the experimenter, and in either case it does not shell off nor crumble. Wet granite, as we all saw at the burning of the Custom-house, positively explodes in the heat—the flutings of the pillars, for instance, leaping off two or three feet. If, therefore, soapstone should be employed for floorings as well as for walls (and there is no reason against it), a perfectly fireproof building would be the result. So if the assertions of all the chymists turn out to be correct, we have at last found out the very perfection of building materials. But they are testing the matter in New York, and we shall soon hear.—*Portland (United States) Advertiser.*

FALLS OF HOUSES.—At Wednesbury, on Thursday before last, as some of the workmen of Mr. Cox, builder, of Tipton, were engaged at Hill Top, excavating for the foundation of some new premises, a tenement adjoining fell down and destroyed a portion of the property of the tenant.——At Darlaston, lately, a portion of some old buildings in Blakemore's-lane fell down into the street and killed a child. The alleged proprietor has since been fined 10s. and costs for not removing the debris. He stated that the ownership was in dispute, and that he had been advised to have nothing to do with it.

PLATE-GLASS INSURANCE COMPANY: ASHBURTON *v.* THE COMPANY.—This case came on for trial on Monday last, in the Sheriff's Court, Guildhall-buildings. The plaintiff is a dealer in cigars, in Princes-street, Cavendish-square, and has the plate-glass in her shop-windows insured with the Plate-Glass Company. About the end of April last, she employed a decorator to wash and clean down the front of her house and shop. During the operation, one of the workmen fell from the first-floor balcony: the steps on which he had been standing falling after him, broke the glass in the shop-window. The plaintiff gave notice of the accident to the company: they replied that they were not liable under the 7th clause of their conditions, wherein they hold themselves exempt from accidents happening during alterations. The Judge ruled that the act of cleaning could not be considered to come under the head of alterations to the premises. Verdict for the plaintiff with costs. A. M.

RESTORING WALLS TO THE PERPENDICULAR.—The plan suggested by your correspondent, "J. B. B." page 323, for restoring bulged walls, I entirely concur in. In a work undertaken by myself more than twenty-five years ago, I recommended to the parish authorities the use of spirit lamps, 1 foot apart, all along under the iron rods, four in number. It was for a chapel in the suburbs of the metropolis, where the north and south walls were thrust out by the weight and pressure of the galleries, running midway both in their lengths, horizontally, and also in their heights, or perpendicularly. The difficulty, however, was how to make these rods *ornamental* as well as useful (for we had no floor to *conceal* the rods). I therefore introduced some ornamentation by way of scroll-work, in accordance with the character of the structure; and supported the chandeliers *upwards* from the same, which looked, under the circumstances, tolerably well; and in a case which has occurred this week under my notice, where the feet of the rafters of a large dancing-room (having collars only and no tie-beams) have thrust out the walls, I have suggested that the chandeliers be hung *downwards* from similar ornamental scroll-work. The mode adopted by "J. B. B." is simple, perfectly intelligible, and in exact agreement with my own, the origin of which was a conversation with my friend the late Thos. Tredgold, civil engineer, a name long to be remembered.—I. B. W.

FIRE AT THE BLACKWALL RAILWAY ARCHES.—An extensive fire occurred on the 21st ult. in some oil and turpentine stores which extend under the railway arches at New-road, St. George's in the East, and whereby the arches were so much injured that it was found advisable to shore up the up side-rails, a circumstance which proves it to be a serious consideration whether the public safety ought to be jeopardized by the letting of railway arches as stores for goods of so combustible a description as oil and turpentine, more especially as this is the second fire which has occurred in the same premises, we are told within the last ten or eleven years.

REVIVAL OF TOWN AND VILLAGE GREENS.—The members of an association, the extent of which we scarcely know, but which appears to be patronized by Lords Stanhope, Dudley Stuart, and R. Grosvenor, Sir B. Hall, and other gentlemen, have taken some land near the Harrow-road for "a self-supporting village-green," which is intended as a model for others they have in contemplation. The purpose of reviving town and village greens, if a *bond fide* one, is certainly to be commended. The association is named "The West London Anti-enclosure and Field-garden Allotment Society," and it seems to be connected with the temperance movement.

THE MONTGOMERY MONUMENT.—The committee at Sheffield for carrying out the resolutions of the inhabitants in public meeting for the erection of a monument to the late poet James Montgomery, have consulted with Mr John Bell as to the sort of monument best adapted to the site, which was shown to the sculptor, who is shortly to state his views to the committee, who will report the result to the inhabitants.

OPERATIVE SLATERS.—The operative slaters of Glasgow having lately expressed a wish for an improvement in present arrangements, the masters kindly agreed to advance their wages to 22s per week, or the option of 21s. and the Saturday afternoon to themselves. The men unanimously agreed to accept the latter alternative.

CITY THOROUGHFARES.—Has the projected Holborn-hill viaduct been considered impracticable, or has it died a natural death, or is it still under consideration? Be this as it may, something of the kind must sooner or later be constructed, and I have presumed that its procrastination arises only from the great costliness and difficulty of the undertaking: to lessen these I would propose the following,—That instead of the viaduct being constructed in a parallel line with Holborn and Newgate-street, a road be cut at the Skinner-street end of the Old Bailey, diverging to the left, and a similar one at the Ludgate-street end, diverging to the right, the two converging into one at a convenient spot at Farringdon-street, over which it would pass to the other side; the two again separating and continuing their course right and left respectively to the two ends of Fetter-lane. The principal part of the property through which these would pass is of an inferior description, and some portions in a very dilapidated condition. I would wish to draw your attention to one or two of the most prominent advantages which the above possesses.—that it could be accomplished without impeding the traffic: that there would then be a direct road from London-bridge to Holborn, and from the Post-office to Temple-bar; and that Ludgate-hill, Fleet-street, and Holborn-hill would be relieved from all heavy vehicles which at present block up and retard the speed of all.

J. C.

WET AND DRY METERS.—In reference to a report from a Leicester paper of experiments with a wet and dry meter, lately referred to in our columns, Mr. Defries writes to explain that the reason why the wet meter in question registered less gas than his dry meter, was (or must have been) that the wet meter leaked at the drum, or some other part, and that in experiments since made with the same meter, it was found not to register at all, though gas was passing through it.

THE EVIL OF BACK-TO-BACK DWELLINGS.—At the annual meeting of the Leeds Public Improvement Society—a society whose object is to promote public improvement, sanitary and otherwise—the chairman, Mr. Edward Baines, said, "There was an evil going on continually, to which he would like the society to draw attention—the mode of constructing houses back to back, so that there was no thorough draught. That was a mode of building very prejudicial to health. Without good ventilation they could not have good healthy houses; and yet they saw with regret many blocks of houses built in that way still. There could not be those accommodations to houses built in that way that were required; so that there was a want of proper accommodation, and also that want of construction which was essential to ventilation and good health. He did not know whether it was practicable for the society to draw attention to this mode of construction; but it might be worth consideration whether the opinions of architects and medical men should be obtained and published, so that those who build cottages and that class of small houses above cottages, might perceive that this was a mode of constructing houses very unfavourable to health." Mr. Alderman Shew stated that by the local Acts of some towns such houses were forbidden, and suggested that they should pave the way for seeking similar legislative power.

THE SMOKE NUISANCE.—During a recent tour through Cornwall, I was much struck by the fact that the numerous engine-chimneys which are seen in that county seldom emit any "opaque smoke." The Cornish engines are said to be worked with an unusually small consumption of coal; and it appears that, with this economized working, the theory of smoke-consumption has been solved. It is not an unusual sight in Cornwall to see twenty or thirty large engine-chimneys without one of them emitting any discernible exhalation.—B. C.

DECIMAL COINAGE.—At the last ordinary meeting of the Statistical Society, held on the 19th of June, a paper was read entitled "A Decimal System of Coinage for the United Kingdom," by Mr F. J. Minasi. The author commenced by considering the importance that attached to a change in the coinage, and urged the necessity of proceeding cautiously in a measure likely to produce embarrassment to the lower classes of the population. He discussed six plans that had been proposed,—1. The *new guinea* system, which increased the pound sterling by 10d. to enable the descending coins to consist of 100 farthings, 10 farthings, and 1 farthing respectively. 2. The *ducat*, or 10s. unit, which retained the shilling. 3. The *florin*. 4. The *shilling*. 5. The *dollar*. And 6. The *franc*. In the two latter only were the tenths commensurable with existing coins. The franc unit was that advocated by Dr. Gray and Mr. Rathbone. Having laid down certain conditions deemed requisite for establishing a decimal coinage, the author proceeded to explain his system. For the unit of account, he proposed to create a new gold coin, to be termed an *imperial*, of the value of $\frac{1}{25}$ of a pound sterling; also a new silver coin of the value of 10d. and to retain the present penny: thus, he said, the present coinage would not be interfered with, and might remain in circulation side by side with the new, until the old had been gradually withdrawn. For general purposes, a few new silver coins of the value of 5d. 20d. and 40d. respectively, would be useful; and a gold piece of 1,000d. to be termed a Victoria, was hinted at.

MUTUAL FURNITURE SOCIETIES.—A correspondent, "P. M. H." suggests that the principle on which building societies are conducted might be extended to other purposes, such as that of the supply of furniture, and that mutual furniture societies established on such principles might obtain securities on some such plan as that by which rents, and even debts, are now guaranteed or insured. Where one man joins a building society he believes that a hundred would join "a mutual furniture society."

TENDERS

For the erection of the Infirmary at the Infant Orphan Asylum, at Wanstead. Mr. J. H. Taylor, Architect:—

Patmen (Enfield)	£5,700	0	0
Haward and Nixon	5,400	0	0
Mansfield and Son	5,249	0	0
Myers	5,210	0	0

ADVERTISEMENTS.

TO MASTER PLUMBERS AND BUILDERS.

THE ORIGINAL PLUMBERS' BENEVOLEN SOCIETY is removed from the Hen and Chickens, Great Suffolk-street, Borough, to the Star Inn, Blackman-street, Borough. The continuance of all support is still solicited.

250 Loads of excellent Baltic Timber, lying adjoining the Thames, at Richmond

MESSRS. HUMPHREYS and WALLEN will SELL by AUCTION, adjoining the bridge at Richmond (on the Middlesex side, where the goods lie), on TUESDAY, JULY 11th, at TWELVE, by order of Messrs. Munday, the contractors (who have just completed the laying of the main supply pipes for the Southwark and Vauxhall and West Middlesex Water Companies), the whole of the TIMBER and REMAINING TIMBER, &c., which has been used in the construction of the said pipes and other works, comprising about 2 miles of excellent Memel, Riga, and Dantzic timber, much of it as good as new, and the whole of it very serviceable; also, the materials of the temporary workshops, counting-house, a capital skiff, a punt, &c. The Timber will be open to view, convenient for hauliers and carmen, for 3 days, and catalogues may be had, seven days before the Sale, of the Storekeeper, on the premises; also, at the Greyhound Inn, Richmond; at Star and Garter, Kew; and of Messrs. HUMPHREYS and WALLEN, 65, Old Broad-street, City.

Extensive Sale of Railway Plant and Contractor's Stock, Five Carriages of Timber, &c. &c. at Stockton-on-Tees. Important to Contractors, Timber Merchants, Builders, Joiners, &c. &c.

MR. W. HORNSBY begs to announce that he has been honoured with instructions from Messrs. James Trowsdale and Co. in consequence of the completion of their contract on the Leeds Northern Railway, to SELL by AUCTION, on the premises, at the WORKS, near the Leeds Northern Railway Station, Stockton on Tees, on MONDAY and TUESDAY, the 10th and 11th days of JULY, 1854, the whole of the excellent RAILWAY PLANT, WORKING STOCK, and MATERIALS, consisting of locomotive engine in good working order, capital standing engine, fourteen power, built by Hodgson and Sons, of Shildon, five excellent timber carriages and waggons, two powerful travelling cranes, five patent winches, twenty timber contractors' rails, patent sleepers, posts, rods, and Longridge's sleepers, builder's scaffold-poles and small lines, 2000 pressed bricks, two patent presses, brick machines, timber waggons, coup carts, five powerful draught horses, finished wrought and cast-iron gears, stable utensils, &c.; the whole of the stock of blacksmith's tools, and an immense quantity of miscellaneous stock.

And on WEDNESDAY, the 12th day of JULY 1854, at the TIMBER YARD of Messrs. James Trowsdale and Co. near the Darlington Railway Station, Stockton, FIVE CARRIAGES of TIMBER, &c. &c. viz.: Ex *Rhine*, 70 loads Memel Fir; Ex *Queen Bee*, 60 loads Swedish Fir; Ex *Peter*, 60 loads Norway Fir; Ex *St. Magnus*, 50 loads Norway Fir; Ex *Rosebud*, 300 Norway Red and White Deals; 1,000 Battens; 800 Boards.

Catalogues (at the rate of 6d. per copy) may be had on application to the Auctioneer, Mr. Hornsby, Stockton-on-Tees.

The sale will commence each day precisely at ELEVEN o'clock in the forenoon, at half-past Twelve an interval of half-an-hour will be allowed for luncheon, and the sale resumed at One o'clock.

151, High-street, Stockton-on-Tees, 23rd June, 1854.

TO PARISH and RAILWAY AUTHORITIES and OTHERS.

Massive Four-light Lamp on Granite Pedestal.

MESSRS. W. AND C. PUGH are directed by the Commissioners of Pavements for Southwark, to SELL by AUCTION, on THURSDAY, the 13th JULY next, at TWELVE o'clock, in consequence of the erection of the Wellington Clock Tower, the well-known OLD BILLINGSGATE LAMP now standing at the Southwark end of London-bridge, erected, at a large outlay, in 1850, from the handsome design of an eminent architect. The lamp is 18 feet high—the granite pedestal 5 feet 6 inches high by 4 feet 10 inches square. The scroll arms extend 5 feet on each side, exclusive of the Lanterns.—Conditions of sale may be had of Graham Wade, Esq. Solicitor, 34, Blackman-street; at the Bridge House Hotel; and at the Offices of the Auctioneers, 6, Blackman-street, Southwark.

Collection of Plaster and Composition Moulds of Figures, Busts, &c. the Property of the late Firm of Messrs. Edmundson and Son.

MESSRS. THOS. WINSTANLEY and SONS, of Liverpool, are directed by the Executors to SELL by AUCTION, on THURSDAY, the 6th JULY next, at ELEVEN o'clock precisely, on the PREMISES, Oldham street, Liverpool, the collection of MOULDS, used by the late firm in the decorative branch of their business, consisting of nine life-size figures, in armour, of four-tenth and fifteenth centuries; several smaller ditto, busts of celebrated characters, English and foreign; heads from the antique, namely, Achilles, Paris, Laocoon, Apollo, Venus, Hebe, Homer, Socrates, Sappho, and various others; with a great variety of Gothic and Elizabethan ornaments, Grecian and otherwise Candelabra pedestals, tripod stands, griffin legs, wreaths, panels, friezes, &c.; also a number of English and foreign marble slabs, for table tops, prosceniums, wings, and other decorations, suitable for an assembly-room or a private theatre; a turning-lathe, drilling-machine, and silvering table, &c.—The whole may be seen on the Wednesday previous to the sale, when catalogues may be had on the Premises; or at Messrs. Thos. WINSTANLEY and Sons' Offices, Church street, Liverpool.

SALES BY AUCTION.

BARNES, SURREY.—To Brewers, Speculative Publicans, Builders, and Others. Freehold Building Site, for the erection of a Tavern or Hotel, on the River-terrace Estate, adjoining Hammersmith Suspension Bridge.

JOHN HIND will submit to unreserved PUBLIC SALE on MONDAY, JULY 11, at TWELVE, at GARRAWAY'S, by order of the Trustees, without reserve, all that piece or parcel of FREEHOLD BUILDING LAND, land-tax redeemed, and known as the Tavern Plot, in all certain unlicensed premises, situate at the corner of the Lonsdale-road and the Terrace-road, Barnes, both in Barnes and Hammersmith, in Surrey and Middlesex. The latter, which will shortly be the main throughfare from the Barnes-road to the River-terrace West and Hammersmith Bridge and Pier, and within a few minutes' walk of the Railway Station. The estate, in the midst of which this property stands, is let out for upwards of 120 Houses, and has in it the specified deal for tenant, no other hotel or establishment for the sale of wine, beer, or spirituous liquors will be permitted there in, an opportunity is presented for a speculation which cannot fail to prove a most lucrative character; added to which, independent of the improvements which the works upon the estate while advantage must produce, and the neighbourhood that when completed here will have created, Building operations of the most extensive description, both in Barnes and Hammersmith, are in active progress, and others of a still vaster nature are immediately upon which hundreds of men must be employed for years, and when finished can only tend to increase the want of ample tavern accommodation already experienced by the inhabitants and visitors.—May be viewed prior to the day of sale, and particulars had at the premises, Hooper, Gracechurch-street, City; Four Swans Tap, Bishopsgate-street; Messrs. Mitton and Dean, Solicitors, Essex-chambers, City; Garraway's, and of JOHN HIND, Auctioneer and Surveyor, 40, Cannon-street-road, St. George's Middlesex.

TO BUILDERS, ARCHITECTS, CAPITALISTS, AND OTHERS.—Votes for Surrey. Public Sale on most eligible Building Land, being a Portion of the Splendid Property known as the River-terrace Estate, situate at Barnes, in the County of Surrey immediately contiguous to the select and celebrated Domain of Lord Castlereagh, Richmond Park, and Views, including a Portion of the wide and noble Esplanade known as the River-terrace West; Plots of great Depth, in fine Positions upon eligible Roads, and of peculiarly-desirable Contiguity value, winding from the Richmond-road, and having a lovely aspect, the whole suited as Private Investment or Private Gentlemen or the Professions, and Parties desirous of building Freehold for the display of Taste) a Building Speculation of the highest character, the Sites being equally suited for first-class Villas with Lawns in ornamental Pleasure-grounds, and for Terraces of highly remunerative Rents. The Estate generally, for the erection of Residences for Families of Distinction and the genteelest, combining, as it does, the Advantages of perfect Beauty of Rural Situation with a position eminently distinguished, placed in a locality well known as favourite, and yet within an easy distance of Town. The Building Estate of which a Portion of the Property for sale lies, stretches along the Banks of the Thames, from Hammersmith Suspension Bridge (which one extremity of it adjoins), and is a splendid Promenade, 40 feet in width, the works in the course of progress and distance of which are finished last year, and is now complete, and offers most delightful Views for Westside Residences. The Plots on the ancient (handsome) road, shortly before mentioned, nevertheless suited for Dwellings of a somewhat less costly description. The whole is a property not often brought into the Market, and which has been secured at a singularly favourable

JOHN HIND is honoured with instructions to offer to unreserved SALE by PUBLIC AUCTION, on MONDAY, JULY 3, at TWELVE, at GARRAWAYS, in Tower-street, the TWENTY EIGHT Lots of FREEHOLD BUILDING LAND (the free and land-tax redeemed), most delightfully situate at Barnes, in the county of Surrey, and Hammersmith-bridge. For the convenience of parties desirous of the purchase money may remain on mortgage on eligible investments at 5 per cent interest. Lithographed plans and particulars may be had, and the property viewed by previous application to Mr. T. W. Bunn, Solicitor, 12, Paternoster-row; Messrs. Mitton and Cass, Solicitors, 24, Essex-chambers, Essex-street, Strand, near the estate; at Garraway's; and of JOHN HIND, Auctioneer, 42, Cannon-street-road, St. George's. Mr. Nelson Stevenbats as frequent intervals and conducts set down next the estate; and the Barnes Station is about ten minutes' walk from the property.

Votes for Surrey. Building Sites, close to the Railway Station, at Barnes, in the county of Surrey.

JOHN HIND has the honour to announce to builders, architects, capitalists, and others interested in the disposal of this eligible PROPERTY, that the Estate will be the object of SALE at GARRAWAYS, on MONDAY, 3rd JULY, at TWELVE o'clock.

Lot 1.—A plot of most desirable freehold building land and a new erected and the free, having a frontage on the south side of the Lansdowne-road.

Lot 17. A most valuable building site adjoining the foregoing, and having a frontage of 40 feet, commandingly placed at the corner of the River-terrace West.

Lot 18. A plot of freehold building land, being a part of the River-terrace west, with a frontage the room.

Lots 19 to 26 are similar plots.

Lot 27. A plot of building land on the north side of the Lansdowne-road.

Lot 28. A similar plot.

After which the Tavern plot, situate at the corner of the Lansdowne and Lynhurst-roads.

Auction Offices, 42 Cannon-street road

Important Sale of valuable Materials of the Islington Cattle market; also, numerous Houses and Offices, to be taken down by the purchasers

MR. RICHARDS is favoured with instructions to DISPOSE OF by AUCTION, on WEDNESDAY, JULY 5, and following days, at 10, the whole of the BUILDING MATERIALS, comprising all the useful materials of the premises, and gates, cream tops of pales, 1,000 slate tiles, some slates of slating, 10,000 feet of York paving, a quantity of excellent timber, in roofs, floors, &c. about 1,000 feet of oak post and rails, granite paving, an iron pump in a state of very good repair, &c. May be viewed Monday prior to the Sale, and Catalogues may be obtained of Messrs. Lott, Esq. Solicitor 26, Lincoln's-inn; on the Premises; and of the Auctioneer, Tottenham.

GREENWICH.—Valuable FREEHOLD IRON WORKS, convenient to the Royal Arsenal and Dockyard adjoining Thames-street, and known as the Greenwich Iron Works, for SALE by PUBLIC TENDER, on WEDNESDAY, JULY 5, 1854. The premises comprise engineers' shops, model rooms, foundry, plate-workers' and other shops, boiling, large erections over and a good chimney shaft. They are let on lease to Messrs. Joyce and Co. for a term expiring at Midsummer, 1872, at a rent of 75*l.* per annum, the tenant having the option of a lease to be renewed and sewer rate. The premises are held for the vendors until Michaelmas, 1856, in the Head-mansion to the said the purchaser will be required to take an assignment of that policy, and to pay the premium on the premises and rent from 25th June, 1854. The tenants have an option of determining the lease at Midsummer, 1856. The lessee however, and at large sum in improvements on the premises, so as to adapt them to the extensive trade they are carrying on. Also, a PIECE OF GROUND at the rear of the above, now occupied by the Phœnix Gas Company, by two gas-holders, and to be let on lease to them at a peppercorn rent, for a term to expire also at Midsummer, 1872. The entire ground has a frontage of about 100 feet, by a depth of about 186 feet; and, from its proximity to the river, and its advantageous position for providing materials for furnishing, building and generally for making steam engines, &c. would be large many and receive many interest to the applicant. The title is unexceptionable. Tenders and Form, sealed up and endorsed, "Tender for Premises on Iron Works," to be addressed to the Directors of the Phœnix Gas Light and Coke Company, 7, Bankside, Southwark, on or before TWELVE o'clock on WEDNESDAY, JULY 5. The Directors do not pledge themselves to accept the highest or any Tender. May be viewed by leave of the tenants. Particulars may be had at the offices of the Phœnix Gas Company, Thames-street, Greenwich; or Bankside, Southwark.

SALES BY AUCTION.

BUILDING MATERIALS.—GREENWICH HOSPITAL.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, by order of the Commissioners of Greenwich Hospital, on the PREMISES, on FRIDAY JULY 7, at TWELVE, in lots, all the valuable BUILDING MATERIALS and FITTINGS OF ten Houses, shops in Eastlane and Hubbard-st. Greenwich adjoining the Royal Hospital, comprising ab ut 170,000 good sound bricks, 40 tons timber in roofs and floors, glazed sashes, doors, partitions, floor boards, weather boarding, a large quantity of slate and pantiles and slates, lead gutters and pipes, stoves, coppers, and useful fixtures and fittings, &c. May be viewed on Thursday and morning of sale. Catalogues had at Mr. Hasler's office, 2, Cavendish-square; at the Office of Works, Greenwich Hospital; and of PULLEN and SON, 80, Fore-street, Cripplegate.

Preliminary Notice.—The Valuable Materials of the Gilt-pur-street Prison and House of Correction.

PULLEN and SON have the honour to announce that they are favoured with instructions to PREPARE for SALE by AUCTION, on the PREMISES, on TUESDAY, JULY 25, and succeeding days, at TWELVE, in Lots, the whole of the external and internal valuable MATERIALS of the GILTSPUR-STREET COMPTER and HOUSE OF CORRECTION. The Gilt-spur-street Prison stands upon nearly an acre of ground, and includes within its lofty walls, wards, cells, and dormitories for 300 prisoners, besides the governor's house, the infirmary, the chapel, and the necessary accommodation for the numerous officers of the establishment. Detailed particulars of this enormous mass of property will appear in a few days. The following is a short summary of it:—4,000,000 of the finest stock bricks, 12,000 feet of sheet copper on the roofs, 25 tons of lead in flats, gutters, tanks, and pipes, prime oak and fir timber of large and useful scantlings, glazed sashes, modern doors, marble chimney-pieces, and all the excellent interior fittings of the governor's house and officers' departments, 300 squares of sound floor-boards, 25,000 feet of York paving and landings, the essential Portland stone front, with cornice, sills, and strings, and 1,500 feet run of coping. In the staircases, the newing, pulpit, and fittings of the chapel, all the fittings up of the numerous cells, with their strongly-barred windows, stone floors, and iron doors, with locks and bolts of a peculiar construction, massive iron railed gates, guards, and fences, expensive hot water apparatus, with Perkins's coils of pipes complete, with machinery complete, by Cooper, wrought-iron steam boilers and fittings of the kitchens, coppers, stoves, ranges, cisterns, pumps, baths, pavements, and numerous valuable fixtures, which will be lots up of a superior description, and readily convertible for building purposes.—May be viewed on Saturday and Monday previous; Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 80 Fore-street, Cripplegate.

Very important Freehold Building Land, being part of the Kilburn-park Estate adjoining the Paddington Estate.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions to SELL by AUCTION at GARRAWAYS, on WEDNESDAY, JULY 12, at TWELVE, in numerous lots, about 15 acres of very valuable FREEHOLD LAND, land-tax redeemed, situate at Kilburn, being part of the Kilburn-park Estate, held entirely for building purposes, adjoining the Paddington Estate, and being railway station in the Edgware and Harrow roads, and extending up to Kilburn-lane, and close to the Kilburn station of the North-west Railway. The estate will be subject to numerous lots, with frontages to the new streets or roads about to be laid Park, Cambridge, Percy, Malvern, Caddington, Post, and other roads, and Park terrace, in the parish of Willesden. Particulars and plans are preparing, and may shortly be had of Messrs. Bruce, Esq. Solicitor, Chancery-lane; Messrs. Bayley and Co. of the Red Lion, Kilburn; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lincoln's-inn-place, Strand

Day of Sale altered from the 5th to the 19th JULY

NOTTING-HILL.—Very valuable Plot of Building Land on the Ladbroke Estate, being the only unopened spot on this improved vicinity, a portion of the estates of the late William Ladbroke, Esq.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions from the Administrator to SELL by AUCTION, at GARRAWAYS, on WEDNESDAY, JULY 5, at TWELVE, in one lot, a very valuable and important PLOT of BUILDING LAND, having a frontage of 120 feet to Kensington park-road, and 135 feet to Ladbroke-road, formerly Weller-street east, Nottingham, highly eligible for the erection of villas and detached residences being within a few minutes' walk of high road to Uxbridge and Lord Holland's park, and the only unbuilt piece of land in the vicinity. Separate lessees may be called in aligned by the parish act, direct from the freeholder, for terms of eighty-two years at nominal ground rents. May be viewed and particulars had of J. Andrews Ross, Esq. Solicitor, 11, Salisbury-street, Strand; of Garraway's, and of Messrs Farebrother, Clark, and Lye, Lincoln's-inn-place, Strand

No. 1, KENSINGTON-PARK-LANE, NOTTING-HILL.

A YOUNG MAN, who has been brought up at the bench, and served three years as measuring clerk, and is conversant with the duties of a builder's office, is desirous of a RE-ENGAGEMENT in town or country. None but respectable builders need apply.—Address, W. S. Office of "The Builder."

TO PAINTERS AND BUILDERS.

A THOROUGH Practical House Painter, understands Marbling and Gilding; has been leading man in a respectable firm several years. Wages not the object, but regular employment. No objection to the country.—A. B. 12, Granville-street, Somer's-town.

TO BUILDERS.

A THOROUGHLY COMPETENT SURVEYOR and BUILDER'S ACCOUNTANT would be glad to undertake any MEASURING, VALUING, or ESTIMATING, &c. for builders, upon strictly moderate terms.—Address, R. S. F. 17, Penlington-place, Hercules-buildings, Lambeth.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN is desirous of entering the office of the above as MANAGING CLERK. He is competent to take the responsibility of the usual routine in working drawings, specifications, quantities, superintendence of works, &c. having been in a London Office several years. Unexceptionable testimonials will be afforded.—Address, care of JOHN COE, Esq. the Bank of England.

TO CARPENTERS AND BUILDERS.

A RESPECTABLE YOUNG MAN, aged 27, desires to meet with EMPLOYMENT as CARPENTER and JOINER. Is a good bench hand. Wages not so great an object as constant employment. Reference as to character and ability can be given.—Direct H. M 38, Wellington place, Wellington-street, Blackfriars-road.

AS CLERK of WORKS, or a BUILDER'S SUPERINTENDING FOREMAN, with good references.—Address, M. H. Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN wishes to meet with a SITUATION. Has a knowledge of taking out quantities; is a fair calculator and neat draughtsman. Salary moderate. Address, A. Z. Post-office, Uxbridge, Middlesex.

A THOROUGH PLAIN and DECORATIVE PAPER-HANGER would be glad to hear of work.—Address, No. 8, Waterloo place, Kennington-road.

TO CIVIL ENGINEERS, ARCHITECTS, AND SURVEYORS.

A GENTLEMAN, 36 years of age, of active business habits, who has had extensive practice as Land and Engineering Surveyor, and considerable experience in planning and carrying out of sanitary works under government and public companies, possessing a small capital and business connection, is desirous of a PARTNERSHIP or share in an old-established practice. Satisfactory references given and required.—Address, with real name and residence, to A. B. 29, Stanhope-street, Hampstead-road.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's road, Dalston, in Plots, which will be pointed out by Mr HARRIS, at the Counting-house on the Estate; and in the parish of ISLINGTON, at Grove road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr GREEN, at the Counting-house, on the Estate.—Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Guildhall.

BRENTWOOD, Essex, within 200 yards of the Railway Station.—To BUILDERS, SMALL CAPITALISTS, and Others. TO BE SOLD, or LET, on lease, a few hundred feet of FREEHOLD BUILDING GROUND (land tax redeemed), excellent drainage, and good supply of water, eligibly situate for the erection of small property, which is in great demand. Also for a factory.—Apply to W. K. PRESTON, Esq. Solicitor, Brentwood; or Mr. JOS. BALL, Queen's Arms, Newgate street, London; or G. BUCKLER, Esq. Hill house, Shenfield, Essex.

SYDENHAM.—To BUILDERS and Others. Some very desirable PLOTS of BUILDING LAND TO BE LET, on very moderate terms, situate within five minutes' walk of the Crystal Palace and Sydenham Station.—For particulars and plans, apply to Mr. SEWELL, Longton Lodge, Longton grove, Sydenham.

TO ENGINEERS, BOILER MAKERS, AND OTHERS.

WATERSIDE PREMISES.—TO BE LET, on lease, a capital WHARF, with a good frontage to the Thames, and in a rapidly improving neighbourhood, with a smith's business, punching presses, tools; also LAND TO LET, suitable for manufactories, or small houses.

TO BE LET, for building, EIGHT ACRES of MEADOW LAND (the whole or in parts), within twenty miles from London, on the Surrey hills.—Apply by letter (prepaid), to O. M. 7, Railway-arcade, London-bridge.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas' tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

FREEHOLD BUILDING LAND, with BRICK EARTH, Islington.—TO BE SOLD or LET in one or more lots, about TWENTY-TWO ACRES of LAND, situate between the Upper Holloway and Hornsey roads, within about 2¼ miles from the Angel.—Apply to Mr. PEACHEY, 17, Salisbury square.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL. TO BE LET, on building lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden, of nearly five acres in extent. The roads, garden and drains are being formed. Advances will be made to responsible parties.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery lane.

RICHMOND-HILL, SURREY.—Some eligible PLOTS of LAND TO BE LET, on long building leases in this delightful neighbourhood, where at the present time there is a great demand for houses. Respectable builders taking this land will receive assistance from the ground landlord in the supply of bricks at a low credit and in moderate cash advances.—For plans and particulars apply at the Offices of Mr. BLENKARN, Architect, 3, Sise-lane, City, and Richmond-green, Surrey.

FREEHOLD BUILDING LAND at KILBURN, for eight houses adjoining the Carlton-road, TO BE SOLD.—Apply to JAMES BOUTELL, 8, George-court, Piccadilly.

TO BE SOLD, at FINCHLEY, Middlesex, nearly FIVE ACRES of FREEHOLD LAND, with a frontage to the great north road at its junction with the Finchley road, six and a half miles from the Regent's-park. This land is surrounded by building. Part of the purchase money may remain on mortgage if required. Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery-lane.

SPENCER LODGE, CLAPHAM STATION. FOR SALE, by Tender, on or before the 5th of JULY, 1853, the FREEHOLD FAMILY RESIDENCE, with domestic and stable offices, conservatory, lodge, and pleasure-grounds, situated on the margin of Wandsworth-common, and is only a few yards distant from the Clapham Station on the South-Western Railway. The house, consisting of four stories, contains dining-room, drawing-room, library, butler's pantry, five bed-rooms, three dressing-rooms, three attics, kitchens, scullery, wine, beer, and other cellarage complete, and the usual appurtenances. The site contains 1a. 3r. 39p. and the ground is very valuable for building purposes,—the frontages immediately adjoining having sold at from 60s. to 73s. per foot.—Plans and conditions of sale may be had at the offices of the National Freehold Land Society, 14, Moorgate-street, London.

FREEHOLD LAND FOR SALE.—Lot 31, on Cottenham Park estate, 33 feet front, 152 depth. Tithe free. Price 45l. Also, Six Drawn Shares for an estate at Hammersmith. Address, W. BARTLETT, 16, Sloane-street, Chelsea.

TO BUILDERS, &c.

DESIRABLE FREE PUBLIC INN.—TO BE SOLD or LET, with immediate possession, or at Michaelmas, a very desirable roadside FREE PUBLIC INN, a short distance from a railway station in Essex; with excellent gardens, and suitable yards, cattle-walks, stables, sheds, &c. in substantial repair. The brewing plant, stock in trade, and part of the furniture, to be taken by valuation.

N.B. The building business might be added to the above with every prospect of success. Repository and other auction sales are frequently held at the house. For further particulars and cards to view the property, apply to Messrs. SURRIDGE and SONS, Halsted and Inworth Hall, Essex.

BRIGHTON ESTATE, EAST SUSSEX.—The CONSERVATIVE LAND SOCIETY.—The Allotment of the valuable Round Hill Park Estate (second portion) will take place at the Offices, 31, Norfolk-street, Strand, London, on WEDNESDAY, the 5th JULY. Plans of the Estate, price 6d. or 1s. if sent by post, and particulars may be had of

CHARLES LEWIS GRUNEISEN, Secretary.

LONDON and COUNTY FREEHOLD LAND SOCIETY, Central Offices, 4, Cannon-street West, City.

A. W. HAYMAN, Secretary.

A PLOT of GROUND WANTED, about three quarters of an acre, for engineering works, either freehold or long leasehold.—Address, stating particulars, to G. B 168, Drury-lane.

WANTED, a WHARF and PREMISES suitable for a Builder and Contractor.—Address to JAMES THOMPSON, 1, John's-terrace, Walworth-road.

TO BE DISPOSED OF, an established BUSINESS of a ZINC MANUFACTURER. The above would be worth the notice of a plumber who could connect the two branches together; the shop is a large double-fronted one, and is very convenient; rent moderate.—Address, A. B. Mrs. Matthews's Metal Warehouse, No. 9, Crooked lane, City.

TO BE DISPOSED OF, an old-established PAINTING, PLUMBING, GLAZING, and PAPER-HANGING BUSINESS in Shropshire, with immediate interest in a work on hand. Four good shops, &c and close to railway station. Address in first instance, giving real name, B. Y. Post-office, Shrewsbury.

TO CARPENTERS AND OTHERS.

A JOBBING BUSINESS, established ten years, TO BE DISPOSED OF. Rent very moderate.—Apply to Mr. TRIPP, 24, Rochester-row, Westminster.

MEASUREMENT and VALUATION of all Works contracted with Building. Mr. FREDERICK STENT continues to measure and value all work and materials, and to adjust accounts between masters and workmen. Estates surveyed and mapped.—Apply at Mr. FRED. STENT'S Offices, 24, Orchard-street, Portman-square.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
19a, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

LEVIGATOR.—Registered for Grinding Mathematically level Stones, Glass, Slate, and other substances requiring a granulated or smooth surface, effecting a saving of two thirds the usual labour and time. Prices, 12-inch diameter, 40s.; 15-inch, 50s.—Sole Agent, S. STRAKER, 80, Bishopsgate Within, London.

TO ARCHITECTS AND BUILDERS.

ALTAR CLOTHS, CARPETING, OAK CARVINGS, and every description of METAL, supplied by FRANK SMITH, 36, Southampton-street, Strand; Church Decorators, &c. An Illustrated Catalogue, containing upwards of fifty woodcuts, may be had on application.

FRENCH POLISHING.—T. CHOWLES, French Polisher, &c. Warren-mews, Fitzroy-square. Builders' work estimated for and done on the shortest notice. Houses of furniture contracted for and done by the year. Country orders executed with despatch. Orders by post punctually attended to.

TO TIMBER-MERCHANTS, BUILDERS, PLASTERERS, &c.

MR. JOHN RICE, 79, Tithebarn-street, Liverpool, has ON SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general. Price and terms on application.

ASPHALTE PAVEMENT.—HENRY WRIGHT is prepared to lay down his Asphalte Pavement of which is particularly adapted for railway platforms, footpaths, garden-paths, court-yards, and school-yards, ¾ in. to 3 in. thick, from 1s. 6d. to 2s. per square yard.—Address, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 25s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the cheapest low price, and the work guaranteed.—Apply to JOHN CHARLES WILKINSON, PORCEAUX, BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,.....

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING Messrs HYDE, SMITH, and LEWIS, Architects Civil Engineers, Surveyors, &c beg to inform railway directors, public committees for local projects, noblemen, gentlemen, solicitors, landagents, and others, that they EXECUTE every description of professional work on the most reasonable terms. Railways, roads, water works, &c planned, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs, prepared and executed. Estates, manors, parishes, and townships, surveyed and mapped. Land, timber, buildings &c measured and valued. Mines, quarries, land and estimates of dilapidations given. Maps, plans, &c. drawn, copied, and reduced with accuracy and despatch. 24, Guildford street, Russell-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING. Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c beg to inform their friends and the public that they have REMOVED their OFFICES with every requisite necessary for acquiring a thorough practical knowledge of the profession, including models and instruments of every description. The PUPILS are all enrolled and enlarged, embracing all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS.—Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

ARCHITECTURAL, CIVIL ENGINEERING, and SURVEYING OFFICES Established by Messrs. HYDE, SMITH, and LEWIS Architects, Civil Engineers Surveyors, &c. For preparing Gentlemen for Architects, Engineers, Surveyors, Levellers, Draughtsmen, Modellers, and Tenders. Every EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring, Making Pencils and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c &c -Terms One Guinea per Quarter. For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

HOUSE DECORATIONS.—J. MAC LACHLAN, Painter and Decorative Artist, 35, St. James's-street, and 6, Clapham-common, informs Architects, Surveyors, and Others, that he is most fully accounted with his trade in all its details, and respectfully requests a trial from those who may wish to have their work neatly executed at a very moderate charge, and punctual to time. J. Mac L. will be glad to make designs for the decoration of rooms, or public buildings, in any part of the kingdom, with estimates.—Tenders for general repairs.

TO CIVIL ENGINEERS.
DRAWINGS and PLANS of all descriptions made from Engineers' Notes and Sketches, or Copied, quantities taken out, &c. &c. by Mr. T. D. WELSH, 4, Harleyford-street, Kennington. Terms moderate.

DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artistic Decorators to his Majesty the King of Hanover, and executors of the Byzantine Court, the Frieze in the Renaissance and the centre portion of the Indian Courts, Crystal Palace, Sydenham, most respectfully beg to inform the public that they have removed from 201, Piccadilly, to 28, Pall mall, and considerably increased their establishment.—Address, BEENSEN and KUCKUCK, 28, Pall-mall, London.

ARCHITECTURAL DRAWING, &c.—The Architects, Builders, Civil Engineers, and Mechanists' Drawing Classes, conducted by J. G. HILL, Architect, Offices, 35, Old-street, London. A new prospectus just out, to be had on application at the Offices.

CRYSTAL PALACE.—DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artistic decorators to his Majesty the King of Hanover, and executors of the Byzantine Court, the Trist Ceiling, the Frieze in the Renaissance and the centre portion of the Indian Courts, Crystal Palace, Sydenham, most respectfully beg to inform the public that they have removed from 201, Piccadilly, and have considerably increased their premises.—Address, BEENSEN and KUCKUCK, 28 Pall-mall, London.

MESSRS. RODGERS and STYRING, of SHEFFIELD, beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the DECORATION OF CHURCHES, MANSIONS, PUBLIC BUILDINGS, &c in the most correct style of Art, from Designs, and under the direction of H. TAYLOR BULMER, Esq of Shrewsbury. Bank whose works may be seen at St. Barnabas Church, Pimlico; St. Mary's, Parm-street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; and numerous other works in town and country.

C. LEITWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Mustrie street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c to his stock of patented sheet lead, plug ditto, crossweb, &c. &c. sheet-lead, and patent pipe, plate patent plate, sheet and crown glass, white lead, oils, colours, &c. 20s PER CWT. GIVEN for OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

LEEDS TERRA-COTTA and SANITARY TURE WORKS.—Show-rooms, Great George's street, near the Town-hall, Leeds.—WILKS and PERKINS, Manufacturers of every description of Ornamental Terra-cotta and Sanitary Wares, Trusses, Fonts, Flower Vases and Pots, Chimney Tops, Bridge Tiles, Watercloset Pans, Fire-grate Backs, Fire-bricks, Quarries, &c.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzi, Busts, Consoles, Trusses, &c. by T. M. BLASHFIELD, of Millwall, near the West India Docks Station, and 9 H at No. 1, Praed-street, Paddington; where designs and designs can be obtained. Terra-cotta and Sanitary Ware, by T. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Neptune, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Royal Exchange, and the roof of the Admiralty Court. The Pompeian roof is Terra cotta and red cement combined. Since the execution of these works, T. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The permanent and extensive use of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are dangerous to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grinding appearance, but also by the tendency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—
HUBBUCK — LONDON — PATENT.
If not so marked, the reason may be inferred.

Every information in particular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MORLEY and CO.; and by the Company's Grinding Agents, in London, Messrs CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; JACK and BRADY wholesale and retail agents, 8, Tottenham-court, New-road, and 81 Upper Thames-street City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 46, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. in Leith, by Messrs R. ANDERSON and CO. Tumbler cabs, by OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s 15s and 21s each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c as a substitute for oil paint: it is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges park railing, &c 8s per gallon

PATENT INDIA RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finishe in oil colour. Price 9s. per gallon, which will cover and finish at one 15s square feet.

PATTERNS, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Lanston Scott's Patent)
CROWLEY, WHITE, and CROWLEY Sole Manufacturers, now supply this innoxious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

6, South Wharf, Paddington.
PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, (sent of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the best cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

TO BOARDS OF HEALTH, COMMISSIONERS OF SEWERS, ENGINEERS, ARCHITECTS, DISTRICT AND ROAD SURVEYORS
W. AUSTIN'S PATENTED INVENTIONS, for sanitary and other purposes, are open for inspection, at Austin and Ord's Wharf, Arundel-street, Westminster. Trials are requested to prove the merits of the various inventions.—Communications, address W. AUSTIN, 27, Holywell-street, Westminster.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Offices, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT WORKS, Northfleet, and Belvedere-road, Lambeth.
KNIGHT, BEVAN, and STURGE, Manufacturers.
For town, country, and exportation.

POZZOLANA.—Contractors and Builders requiring genuine ROMAN CEMENT (POZZOLANA), can purchase a cargo of 1500 tons, now on the way from Civita Vecchia, deliverable in Liverpool.—Apply to Messrs. A. SNIDER PELLEGRINI and CO., 9, Great Winchester-street

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by SMITH, BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders and others interested with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of lime is held for building in wet and damp situations, such as wharf walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-grinds near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concretes or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.
SECONDS, PAVIORS' STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GROUND ABERTHAW LIME (for Hydraulic Works), Blue Lias Cement, Cambrian Plaster, Castle Flour of Lime (for Agricultural and Gardening purposes), and Portland Cement, shipped at Cardiff, in barrels, to all parts of the world, or forwarded by railway direct out of the works, in sacks or barrels, to any part of the kingdom.—JAMES BIRD and CO. Cambrian Cement Works, Cardiff.

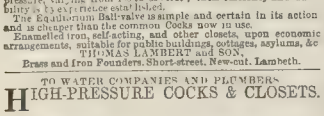
PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the necessary and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yield 60, 120, 180, and 240 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

PRIZE MEDAL, CLASS 29.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under tumultuous high pressure, varying from 100 to 400 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action and is cheaper than the common Cocks now in use.



Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

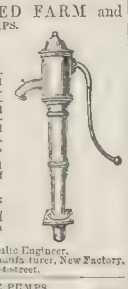
LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, worked by machinery, and fixed in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, soaps, barges, salt-making, &c adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE



Pumps of any size single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N B The above can be worked either by hand, horse, or engine power.

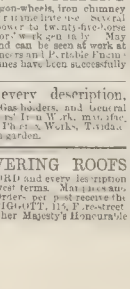
Iron Pails 28s. per doz. painted
Ditto . . 38s. per doz. galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, R 154.

The usual allowance to the trade.



PUMPS of SUPERIOR CONSTRUCTION fitted perfectly true by improved machinery in various plain and ornamental patterns, for square and market-places, roads, conservatories, liquid manure, soap, barges, breweries, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot and cold liquors, &c. &c. Long barrel and bucket lift pumps, with handles on pumps; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps from 4 in. to double 16in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer,
Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump, complete £1 15 0
Patent Pump, with 11 feet of lead pipe attached and bolts and nuts ready for fixing 2 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Rooming, and Plant Houses, from cold ground water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse-rail, complete. Strong, simple, permanent in use. Several are ready for delivery from six to ten power to twenty-five horse power, and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MERRYWEATHER and HALES, Engineers and Pump Makers, 63, Blackfriars-road. These engines have been successfully employed for years.

STEAM BOILERS of every description. Wrought iron Girder Bridges, Gas holders, and General Castings, Cranes, Cables, and Chains; Iron Work, manufactured by MILLWARD and HUNSLEY, Phœnix Works, Toddington near Dunstable, and 5, Office, 78, Hatton-garden.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE and TWINE delivered upon the lowest terms. Manufactured temporary Awnings on sale or hire. Orders per post received with the most prompt attention.—WILLIAM PIGGOTT, 115, Fleet-street City Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

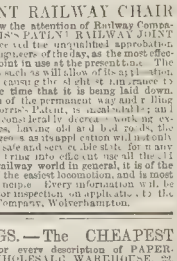
VENTILATION.—PURE AIR.

Sheringham's Ventilator admission of pure air for the through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time is the most supply of fresh air is most required.—HAYWARD, BROTHERS, and Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable Ironmongers, Builders, &c



SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker

PURE GAS.—TO GAS COMPANIES, ENGINEERS MANUFACTURERS and OTHERS.

PATENT CLAY PURIFICATION. No scrap process has yet been discovered for freeing gas from ammonia, and the removal of the sulphuret of carbon, the monster nuisance of gas-lighting, has been given up in despair. Clay removes both these impurities, and which from the purifier—the bright jet of carbon is visible, completely blackening the clay. The light of the gas is increased in proportion to its thorough purification. The proprietors of this patent are now ready to grant licenses for its use—terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITTAKER, Agent to the Patentees, Gas Works, Wakefield.

HADLEY'S SEXTANT.—Wanted, by the Advertiser, a good second-hand, 4-inch HADLEY'S SEXTANT, complete, and perfect in every respect.—Apply, stating lowest price, to A. N. Post-office, Taunton.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are able to manufacture Bells of any size, note, or weight, to open a note truer in form, and at less cost than has heretofore been supplied.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, simply turned.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved dampers, and regard on a new system, which gives a superior tone and facility for ringing.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS.—This patent has received the unqualified approbation of some of the most eminent engineers of the day, as the most effective economical and perfect joint in use at the present time. The simplicity of its construction is such as will allow of its application to any line of railway, without causing the slightest hindrance to the ordinary traffic during the time that it is being laid down. The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and although more expensive in the first instance, is the most economical in the end. To railway companies, having old and bad roads, the principle is peculiarly advantageous as its application will instantly render the road in a perfectly safe and secure condition for many years, if, at the same time, bring into effectual use all the old and broken chairs. To the railway world in general, it is of the greatest value, as it adapts to any of the existing rails, and is most simple and cheap in principle. Every information will be given, and models forwarded for inspection, on application to the Manager, at the Offices of the Company, Wolverhampton.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GREGG'S, ENGLISH WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper hangings for the present season, which comprise every description of style and quality, from the most elaborate design to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.

115, Whitechapel, near the Obelisk, and 500, Oxford-street.

ROYAL ACADEMY of ARTS, Trafalgar square.—The Exhibition of the Royal Academy is NOW OPEN. Admission (from Eight o'clock till Seven), One Shilling. Catalogue, One Shilling.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

COLOSSEUM, REGENT'S-PARK.—Admission, One Shilling.—The original Panorama of LONDON BY DAY is exhibited daily from half-past Ten till Five. The Panorama of LONDON BY NIGHT, every evening, from Seven till Ten. Music from Two till Five, and during the Evening.

CYCLORAMA, ALBANY-STREET, now OPEN, with a magnificent Panorama of Naples, exhibiting the Great Eruption of Vesuvius and Destruction of Pompeii, A.D. 79, with the present state of the Ruined City. These views have long been in preparation, and will be exhibited with all the resources of this vast establishment. Admission, 1s.; Reserved Seats, 2s. Daily, at Three and Eight o'clock.

HORTICULTURAL SOCIETY of LONDON.—His Grace the President has kindly directed the Grounds of Chiswick House to be opened for the reception of the Visitors to the Society's Garden at the NEXT EXHIBITION, on SATURDAY, the 6th JULY. Tickets are issued at this Office, price 5s., or at the Garden in the afternoon of the 6th July, at 7s. 6d. each.—21, Regent-street, London

ROYAL POLYTECHNIC INSTITUTION.—Under the Patronage of H R H Prince Albert.—The public is respectfully informed that this establishment is now placed UNDER NEW MANAGEMENT, and that alterations and improvements are in progress in all its departments, which it is hoped will render it even more worthy of the patronage of the public than it has hitherto been. All communications in future to be addressed to J. H. Pepper, Esq., the Resident Director. All the Lectures, Optical and other Exhibitions are continued as usual. Open Daily from Eleven till Five, and every Evening except Saturday from Seven till Ten. Admission, 1s., Schools and Children under Ten Years of age Half-price.

LOANS.—Persons desirous of obtaining ADVANCES from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, forms, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rate 6l. each copy, or 1s. per post.

Note.—Four new classes are now in course of formation for London, and will immediately commence operations.

SMALL INVESTMENTS WANTED immediately. The persons selling their properties may retain power to repurchase after a fixed period when so desired.—Applications to be made to Mr. ALFRED COX, Surveyor, 68, New Bond street.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, dated 1st July, 1850:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce the speed of the trains when for the Post Office, or Police, or certain other requirements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

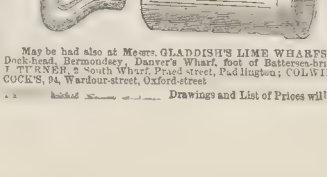
M'C COLLOUGH and CO.'S PATENT FELTS, viz. Asphalte Roofing Felt for covering temporary or permanent buildings. Price 2d per square foot.

Inodorous Felt for lining damp walls, iron houses, &c. Price 1d. per square foot.

Dry Hair Felt, for covering boilers, steam pipes, &c. which effects a saving of 25 per cent. of fuel. Prices according to thickness.

All particulars and samples furnished by J. M'C COLLOUGH and CO. 10, Lime-street, City.

NOTICE to INVENTORS.—New Patent Law.—PATENT OFFICE, 4, Trafalgar-square, Charing-cross. The "Circular of Information," and plain instructions for the protection of inventions at home or abroad, may be had gratis, or sent by post on receipt of a letter, pre-paid, to Messrs. PRINCE and CO., 70, Chancery-lane, Patent Agents.



GUTTA PERCHA TUBING.—May be used for years, is tough and durable, and it is therefore valuable for conveying water, &c. &c. It is peculiarly useful for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or better. Its strength is extraordinary; the small half-inch diameter tube having resisted a pressure of 25 lbs. on the square inch, without bursting. The smaller sizes may be had in lengths of 100 feet and upwards. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in houses, &c. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

BY ROYAL LETTERS PATENT. IMPORTANT TO BUILDERS, DECORATORS, &c.—The present system of graining surpassed by the use of the Patent Tools is established beyond a doubt, for despatch and superiority of work. Any person can produce the most elaborate description in imitation of graining, which, when executed, is produced instantaneously; its merits having been tested by the most talented of the day, is announced to be an indispensable tool in the hands of grainers. The time of time is immense, and enables any person, however inexperienced, to produce first-class work as produced by the most accomplished Grainer. The tools can be obtained with all necessary information of J. BELLAMY, Vere-place, Upper-street, Islington, London, where specimens can be seen. A sample of the tools forwarded to the country, upon the receipt of one pound. Post-office orders payable at Islington Post-office, to JOHN BELLAMY.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 30, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cleanliness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimate superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may require; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and intercepting plate, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER, 2 South Wharf, Praed street, Paddington; COLWILL Brothers, 68, Bridge-road, Covent Garden, and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

CLOSETS WITHOUT THE COMPLICATION OF CRANKS AND WIRES

WERE FIRST INTRODUCED BY GEORGE JENNINGS IN 1848.

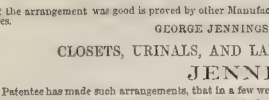
That the arrangement was good is proved by other Manufacturers finding it answer their purpose to advertise that they NOW manufacture Closets without Cranks and Wires.

GEORGE JENNINGS respectfully calls the attention of Architects and Engineers to his

CLOSETS, URINALS, AND LAVATORIES FIXED THROUGHOUT THE CRYSTAL PALACE.

JENNINGS'S DRAIN-PIPES.

The Patentee has made such arrangements, that in a few weeks he will be enabled to supply any quantities and sizes up to 2 feet to order.



A Simple Closet, with Stool Cock complete, packed and sent to any part, on receipt of a Post-office Order for 30s.

A Book containing Illustrations, Descriptions, and Prices of JENNINGS'S HIGH-PRESSURE BIB, BALL, and STOP COCKS, SLUICE VALVES, and FIRE COCKS, URINALS, TORIES, PUMPS of all kinds, FOUNTAIN-JETS, GULLY TRAPS for STREETS, STABLES, or SINKS, &c. &c. can be had on application, or by post if two postage stamps are ed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,

No. 29, Great Charlotte-street, Blackfriars-road, London.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.

R. & HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,

Your obedient Servant,

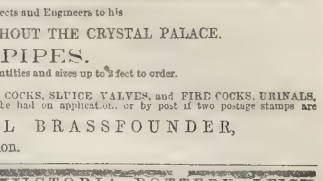
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

O MANUFACTURERS of GLAZED STONEWARE DRAIN-PIPES and OTHERS.—A SHARE

e wish of a valuable Business in the above line, the works ated in Northamptonshire, with railway communication, and ches paved to it, of a nature superior description. The present rietors would either retain a share with a party who could s knowledge of the trade and a moderate capital into the ers, or would let the works on lease, with a royalty on the For particulars, apply to Messrs WILLIAM and HENRY AM, Merchants, 21, Bishopsgate-street Within, London ten applications, except from parties in the country, will not ended to.

BOURNE VALLEY POTTERY,

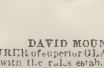


NEAR POOLE, DORSET.

Manufactory of Salt Glazed Stoneware, Pipes, Bends, Junctions, &c. from clay of the finest quality, the produce of the estate on which the goods are manufactured; all inferior clay being at once rejected.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.



DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on the most moderate terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 85, Barksale, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

A FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hydrostatic Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patented machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N invites particular attention to the superior quality of the clays used in his manufacture, which is equal to glass, and renders it impervious to fluids.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill Bank. Martin and Woods's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horseshoe Wharf, No. 6, Upper Thames-street.—W. Peters's, North Wharf, Paddington. C. Richardson's, South Wharf, Little C. Britt's, Cambridge Heath Wharf, Hackney.—Bull and Sons and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

REDUCTION of PRICE in UNGLAZED DRAIN PIPES.

Manufactured by CHAS. FRANCIS and SONS, NINE ELMS.

The price in future will be,

6s. 2d.	per foot for the 3 inch bore.		
6s. 3d.	"	4	"
6s. 6d.	"	6	"
7s. 3d.	"	9	"
1s. 2d.	"	12	"
2s. 3d.	"	15	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is now entirely removed, and it is well known that good earthenware, UNGLAZED, is the most natural discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

Agent for Southampton, R. L. FLUDER, American Wharf.

MILL WALL POTTERY (near Scott Russell's).—Messrs WILLCOX and CO invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Patterns forwarded on application.

LAMBETH STONE POTTERIES.—TO BE SOLD, a POTTERY BUSINESS, situate in High-street, Lambeth, in good working order, and offering an excellent opportunity for investment in this lucrative trade. For particulars apply to Mr. W. J. LOAT, Of Arch-buildings, Clapham-common.

TO POTTERS, PIPE-MAKERS, AND OTHERS.

TO BE LET, with immediate possession, all that POTTERY, called "Parkstone Pottery," situate at Parkstone, Poole, containing two kilns. Also, a BRICK-KILN, in full work. A good bed of clay close to the works, with every kind of sand suitable for the trade. Pipes, pipe-moulds, and moulds on the premises ready for use. Capital moderate.—Application for terms to be made to Mr. BRYANT, Blackhill, Parkstone

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA RUBBER TUBING is now manufactured especially for the above purposes, and is of greater strength than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, brass hose-stops, jets, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE for brewers, &c. fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solution and cement in tin rubber tubing and cord for the joints of glass doors, sashes, frames, &c.—Pipes and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

SALES BY AUCTION.

BURGESS-HILL, near Hassock's gate, Sussex, on the London Brighton, and South Coast Railway. To BRICK MAKERS, CONTRACTORS, BUILDERS, and Others.—About 1,000 second-hand Bricks, and about 6,000 Paving.

MR. PEARE has received positive instructions to DISPOSE OF the above Property, at the auction mart, Bartholomew-lane, London, on WEDNESDAY, JULY 5, 1854, at TWELVE o'clock, by order of the Proprietor, such will be offered in lots, to suit all classes engaged in building operations. The bricks and tiles are now lying in the field close to the Burgess-hill station on the Brighton railway. The rental of the 11¼ rods purchased can be effected with extreme facility, there being room on the land directly on to the railway; and can also be viewed previous to the sale, on application to the Keeper; may be viewed previous to the sale, at the White Hart Regate, Greyhound, and catalogues (which, at the White Hart Regate, Greyhound, Croydon, Fox and Hounds, Sydenham, Jolly Sailor, Norwood; Anchor, Forest-hill; and the Mart; and at Mr. PEARE's Farm-house, Anns, Forest-hill; the Mart; and at Mr. PEARE's offices, 44, Tooley-street, Southwark.

BARKING ROAD, PLAISTOW, ESSEX.

MR. J. T. FISHER is instructed to SELL by AUCTION, at the QUEEN ANNE'S HEAD, Plaistow, near the Turnpike, on THURSDAY, JULY 13, at 4 for 5 PRECISELY, TWO excellent, forty lots of FREEHOLD BUILDING GROUND, with land-tax redeemed within a few minutes' walk of the Barking road station, on the Eastern Counties Railway, the immediate works of Messrs. MARE and Co. and other large factories, and the New Victoria Docks, the contemplated road to which is nearly opposite the property. This land is well adapted for the erection of a class of the uses, the demand for which is almost unlimited, and the rentals highly remunerative, and will give purchasers a vote for the southern division of the county. Plans and particulars may be had at the King's Head, Stratford; Crown and Anchor, Woolwich; Blue Board, Aldgate; of Messrs. J. and W. Shepherd, solicitors, 31, Old Broad-street; at the place of Sale; and of the Auctioneer, Barking-road, Plaistow.

TO BUILDERS, BUILDING MATERIAL DEALERS, AND OTHERS. Balaam street, Plaist w, Essex.

MR. J. T. FISHER is instructed to SELL by AUCTION, on the PREMISES as above, on TUESDAY, JULY 4, 1854, at ELEVEN for TWELVE o'clock, in LOTS to be taken down, and cleared by the purchasers, the excellent BUILDING MATERIALS of a large Family Residence and Boundary Walls, comprising about 350,000 sound stock bricks, 4 tons of lead, quantity of timber in posts, girders rafters, &c. flooring, sashes and frames, doors and fittings, slating, paving, and fencing, &c.—may view the day preceding and morning of sale, and catalogues had at the Blue Boar, Aldgate; King's Head, Stratford; George, Barking; Bell and Anchor, North Woolwich-road; and of the Auctioneer, Barking-road, Plaistow, Essex.

The eligible FREEHOLD LAND to be sold in Plots, of which due notice will be given

Particulars and Land Offices, Kingston, and Marlborough-chambers, 49, Pall-mall.

SALES BY AUCTION.

Mansion-house and Accommodation Land, situate at Eastwood, near Rotherham, in the County of York, with immediate possession. TO BE SOLD BY AUCTION, by

MR. NICHOLSON, at the CROWN INN, in Rotherham, in the County of York, on MONDAY, the 10th day of JULY, 1854, punctually at THREE o'clock in the afternoon subject to conditions of sale, the whole or such parts as shall not in the meantime have been sold by private contract, the following valuable MANSION-HOUSE and LAND, freehold and tithe-free, being part of the Eastwood Estate, in the township and parish of Rotherham aforesaid, that is to say:—

Lot 1. The Freehold MANSION HOUSE, called EASTWOOD HOUSE, situate on the north side of the turnpike road from Rotherham to Doncaster, and about three-fourths of a mile from Rotherham, with a spacious conservatory, pinery, vinery, pleasure-grounds, and the stabling, cottages, and garden on the south side of the Doncaster-road. The mansion-house, which is substantially and handsome elevation, contains numerous sets of rooms and dressing rooms; noble and lofty reception-rooms on the ground floor, consisting of breakfast room, 18 feet by 17 feet 3 inches; dining-room, 21 feet 11 inches by 20 feet 8 inches; drawing-room, 37 feet 5 inches by 19 feet 8 inches; library, 25 feet 7 inches by 20 feet 6 inches the whole handsomely fitted up; spacious enclosed hall, 20 feet 6 inches by 20 feet 5 inches, approached from a portico; principal and secondary staircases, butler's pantry, housekeeper's room, servants' hall, and other servants' apartments, all of the same handsome character. The stabling, cottages, and numerous outbuildings are the pleasure-grounds are most tastefully laid out in lawns, sheltered and ornamented by forest trees and shrubs of many years' growth.

Detached, and on the south side of the Doncaster turnpike-road are three cottages for servants; two good stables, one for four and the other for three horses; loose box, two carriage-houses, coach-house for four horses, pigeon-cote, poultry-yard, with houses complete; two piggeries, two dog-kennels, with yards attached; gardener's house, four garden-sheds, mushroom-house; pinery, 36 feet by 12 feet; two well-filled vineries, one 15 feet by 14 feet and the other 46 feet by 14 feet, or thereabouts; peach-house, 60 feet by 14 feet; forcing-pit, 30 feet by 6 feet; and melon-frame, with a light. This lot contains on the north side of the Doncaster-road 1a. 1r. 17p. and on the south side 2a. 2r. 8p. making together 3a. 3r. 25p. and, with other property, is held by the present occupier, Robert John Bentley, esq. under a lease, dated the 7th day of April, 1842, notice for the determining of which, on the 25th day of June, 1854, has been given to Mr. Bentley. Possession of this lot may therefore be had on the completion of the purchase. The timber on this lot is to be paid for by the purchaser, in addition to his purchase money at an amount to be fixed at the time of the sale. Eastwood House is three-fourths of a mile from the Rotherham Station of the Sheffield and Rotherham Railway, a mile and a half from the Marsborough Station of the Midland Railway, and within easy distances from the usual meeting-places of two packs of fox-hounds. Lot 1 may be viewed during the fourteen days prior to the day of sale, by cards to be obtained of the Auctioneer, at the Crown Inn, in High-street, Rotherham, of Messrs. Solicitors.

Lot 2.—A close of land, containing 3a. 0r. 21p. at the back of the garden described in Lot 1, together with a right of road to the same close from the Doncaster-road, as shown on the plan.

This lot is held by Robert John Bentley, esq. under the same lease determined on the 25th June instant, as is mentioned in the description of Lot 1.

Lot 3.—A close of land, adjoining Dalton Brook and A. Sykes, the old river meadow 10 3

Lot 4.—A piece of land, abutting north on the river Don, and south on Fitzwilliam-road (the greater part arable), the rest pasture, and described in the plan as 8 3

Lot 5.—A piece of land, abutting north on the river Don, and south on Fitzwilliam-road (grass except a few square yards) 9 3

Lot 6.—A close of land, abutting north on Lot 8, and south on Fitzwilliam-road (grass) 10 1

Lot 7.—A piece of land, abutting north on Lot 8, and south on Fitzwilliam-road (arable) 8 0

Lot 8.—A close of land, abutting north on the river Don, and south on Fitzwilliam-road (arable) 15 0

Lot 9.—A piece of land, abutting north on the river Don, and south on Lots 13 and 23 (arable) 9 3

Lot 10.—A piece of land, abutting north on the river Don and south on Lots 11 and 12 (arable) 8 3

Lot 11.—A piece of land, abutting north on Lot 10, and south on Fitzwilliam-road (arable) 3 3

Lot 12.—A piece of land, abutting north on Lots 9 and 10, and south on Fitzwilliam-road (arable) 3 1

Lot 13.—A close of land, abutting north on Lot 9, and south on Fitzwilliam-road (arable) 3 1

The land comprised in lots 3 to 13, both inclusive, contains 65a. 1r. 4p. and will be offered in one lot; and if not so sold, it will be offered in two parts, as follows:—Lots 3 to 6, both inclusive, containing 15a. 3r. 19p. forming one of those parts, and the remaining 49a. 2r. 5p. the other of the parts; and if not so sold, then in the seven lots (lots 4 to 13) abovedescribed.

Lots 1 to 13, both inclusive, were lately in the occupation of Thomas Turner, and are now occupied by Mr. John Stothard, upon which arrangements have been made that the purchaser of any lot may have possession at a short notice, which will, however, before the time fixed for the completion of the purchase. The purchaser may be accommodated with a considerable portion of the purchase money in security of the land purchased by him.

Plans and more detailed printed particulars may be had of the Auctioneer, High-street, Sheffield; at the Banks in Sheffield and Rotherham; of Mr. Dyson, Tinsley; Messrs. Fawcett and Son, Sheffield; Mr. Rawson, Masbrough; Mr. W. G. Taylor, Solicitor, 24, John street, Bedford-row, London; Messrs. Lace, Rodgers, and Naylor, Solicitors, Doncaster; or Messrs. Powell and Broadbent, Solicitors, Rotherham, and 12, Bank-street, Sheffield.

Rotherham, June 3, 1854.

P. Le NEVE FOSTER, Secretary.
Society's House, Adelphi, 4th July, 1854.

COMPETITIONS.

BOSTON CORN EXCHANGE AND ATHENÆUM.—The Directors are prepared to receive Designs and Estimates for a CORN EXCHANGE and ROOMS for the ATHENÆUM at Boston, and hereby offer a Premium of £20 for the set of Plans, Elevations, and Specifications which shall be selected, but for the set next approved, and £5 for the set next approved, the selected Designs, Elevations, and Specifications to become the sole property of the Directors. In case the successful competitor be entrusted with carrying out the design, the first-mentioned premium will merge in the remuneration for his services.

The main object the Directors have in view is a Corn Exchange not less than about 100 feet long and about 45 feet wide, and of correspondent height, and either as part of this building, or on the ground immediately adjoining, the Directors desire to provide accommodation for the Athenæum. The whole of the buildings to be heated, lighted, and properly ventilated.

All the Drawings to be on a scale of one-eighth of an inch to the foot, and to be sent under motto only to the Clerks on or before the 22nd day of JULY next, the signature to be given in an accompanying letter, sealed with the motto, and which will not be opened until the selection be made. The Designs not accepted will be returned.

Further information will be given to any gentleman desiring to send in designs on personal application to the Clerks. By order,

STANILAND and CHAPMAN, Clerks.
Boston, 14th June, 1854.

CONTRACTS.

NOTICE to BUILDERS.—STAPLETON CHURCH, GLOUCESTERSHIRE. Builders are hereby invited to submit TENDERS for TAKING DOWN the TOWER and NAVE of the present church at Stapleton, and for BUILDING on the same site a NEW CHURCH, according to plans and specifications prepared by Mr. NORTON, of 24, Old Bond-street, London. The plans and specifications will be deposited in the Vestry-room of the Church, where they may be examined by builders on and after MONDAY, the 10th inst. between the hours of NINE and SIX. The Tenders, endorsed "Tender for Rebuilding Stapleton Church," to be sent to Mr. NORTON [at the above address], or before the 24th inst.

CONTRACTS.

TO BUILDERS.

SEPARATE Sealed TENDERS for the performance of the following SERVICES, viz.:—

SERVICE 1.—Preparing the Terreplein and Ramparts of each and every one of the Seven Bastions at PENDENNIS CASTLE, Cornwall, for the reception of Dwarf Traversing Platforms, in the Salient Angles.

SERVICE 2.—Preparing Foundation, &c. for a Dwarf Traversing Platform; Erecting an Expense Magazine and Traverse; Erecting two Side-arm Sheds and Traverses, at the Half-Moon Battery, Pendennis Castle, Cornwall.

SERVICE 3.—Enlarging one Embrasure, Heightening the Merlons, and Forming Banquette; Preparing Foundations, &c. for a Dwarf Traversing Platform; Erecting a Side-arm Shed; Erecting an Expense Magazine and Traverse, at Crab Quay Battery, Pendennis Castle, Cornwall.

SERVICE 4.—Preparing Foundations for Twelve Dwarf Traversing Platforms; Taking Down, Reforming, and Extending the Parapet; Erecting an Expense Magazine and Shell-room; Erecting two Side-arm Sheds; and Forming Steps and Passages and Recesses for Shot Furnaces, at the Battery near St. Mawes Castle, Cornwall.

FOR SPECIFIC SUMS.

Will be received at the Ordnance Office, Pall-mall, London, on or before the 17th JULY, at Noon, addressed "To the Secretary to the Board of Ordnance," and endorsed "Tender for Work at Pendennis Castle Cornwall, or "Tender for Work at or Mawes Castle, Cornwall," on the left hand corner of the envelope.

Detailed specifications of the work to be performed, with the terms and conditions of contract, may be seen, and form of Tender and every information obtained at the Royal Engineers' Office, Devonport, between the hours of TEN and FOUR o'clock, from MONDAY, the 3rd, to SATURDAY, the 15th JULY, prox. both days inclusive

Royal Engineers' Office, Devonport, 29th June, 1854.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed Tenders will be received at the Ordnance Office, Pall-mall, London, on or before the 20th day of JULY, 1854, from persons desirous of Contracting with the Honourable Board of Ordnance for the undermentioned Works and Repairs at the WESTERN HEIGHTS BARRACKS, Dover:—

SERVICE No. 1.—Enlarging the Gate-room and constructing a Plate-room at the Mess Establishment.

SERVICE No. 2.—Renewing Joists and Boarded Floors to Four of the N. Block Rooms, and New Steps and Risers to Nos. 3 and 7 Houses.

SERVICE No. 3.—Constructing Two Regimental Stores and a Sergeants' Mess-room under the Ground Floor of the Upper Range of Soldiers' Barracks.

Plans and specifications of the Works may be seen, and forms of Tender obtained, at the ROYAL ENGINEER OFFICE, Dover, between the hours of TEN and FOUR o'clock, from the 6th to the 24th JULY, 1854, Sundays excepted.

The Party who Tenders may be required to complete the Works, will be required to enter into a bond, with two eligible securities, jointly and severally, to be bound under penalty of £—— for the due performance of the Contract.

Tenders for the above Works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London," and endorsed, "Tender for Works at the Western Heights Barracks, Dover."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders

Royal Engineer Office, Dover, July 3rd, 1854.

THE TOWN of BURTON-UPON-TRENT ACT, 1853.—To BUILDERS, EXCAVATORS, &c. The Commissioners under the above Act will receive TENDERS for making an OPEN DRAIN, with Paved Invert, about 618 Yards long; also for making about 4,000 Lineal Yards of Underground Culverts, varying from 21 inches to 30 inches diameter inside, for making cross-drains, and for executing various other works connected with the sewerage of the town of Burton upon-Trent.

Plans, sections, and specifications may be seen, and all necessary information received, at the Office of Mr. THOMAS SPOONER, Town Surveyor, situate in Guadstreet, Burton-upon-Trent, on each MONDAY, TUESDAY, and WEDNESDAY preceding the 29th day of JULY, 1854.

Sealed Tenders, endorsed "Tenders for Sewerage Work," to be forwarded to me by post, or otherwise, on or before THURSDAY, the 27th day of JULY, 1854.

The Commissioners do not pledge themselves to accept the lowest Tender.

By order,
WILLIAM COXON, Clerk to the Commissioners.
Commissioners' Office, Burton-upon-Trent, June 28, 1854.

TO BUILDERS.

TENDERS WANTED for the completion of a number of coachhouses and stables. Specifications may be seen at the Artesian Farm, Kensington-road, Westbourne-grove, Bayswater.—Tenders to be sent to Messrs. UNDERWOOD and COLMAN, Hollis street, Cavendish-square, on or before the 14th.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Ranelagh.
Right Hon. R. A. Christopher, M.P.
Hon. Col. Lowther, M.P.
J. C. Cobbold, Esq. M.P.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the ST. MARGARET'S ESTATE, Twickenham, Middlesex. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, on and after THURSDAY, JULY 6th, between the hours of TWELVE and FOUR. Tenders are to be sent on or before TWELVE o'clock on FRIDAY, JULY 14th, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. St. Margaret's Estate." The executive committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.
33, Norfolk street, Strand, June 30th, 1854.

CONTRACTS.

MARYPORT HARBOUR.—TO CONTRACTORS.—The Trustees of Maryport Harbour are desirous of receiving TENDERS for the EXCAVATION, MASONRY, and WORKS required for deepening the harbour and present dock, and MAKING a NEW FLOATING DOCK, within the harbour of Maryport.

Plans, specifications, and conditions are now lying at the Office of Mr. DEES, Civil Engineer, 33, Church-street, Whitehaven; and Tenders, sealed, and addressed to the Trustees of Maryport Harbour, will be received up to noon of the 12th JULY next, at the Harbour Office—By order,

R. HETHERINGTON, Clerk.
Harbour Office, Maryport, June 15, 1854.

TO CARPENTERS, BUILDERS, AND OTHERS.

ALDERMASTON-BRIDGE.—Persons desirous of CONTRACTING for the REPAIRS and NEW PILES of this BRIDGE may see the plans and specification, at my Office, No. 35, Chain-street, Reading, after WEDNESDAY, JULY 5, between the hours of TEN and FOUR. Tenders to be sent to me on or before WEDNESDAY, JULY 12. The lowest Tender will not necessarily be accepted. By order of the Committee.

J. B. CLACY, Berks County Surveyor.
Reading, July 3, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 11th day of JULY, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 10,140 feet in length, or thereabouts, with other works in connection therewith, in Parish-street, Clarence-street, Cherry Garden street, Union-street, Blackheath-road, Lewisham-hill, and other streets and places in Rotherhithe, Bermondsey, Greenwich, and Lewisham, in the counties of Surrey and Kent respectively; and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender may be inspected and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek street, Soho-square, between the hours of NINE and FOUR p.m. until the 10th JULY. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square,
Dated this 28th day of June, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court House, No. 1, Greek-street, Soho-square, on TUESDAY, the 11th day of JULY, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING a certain intended BRICK SEWER, 1,130 feet in length or thereabouts, with other works in connection therewith, in Manchester-road and Southampton street, Gospel Oak-fields, Kentish-town, in the county of Middlesex, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, until the 10th inst. between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.
1, Greek-street, Soho-square,
Dated this 5th day of July, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek street, Soho square, on TUESDAY, the 18th day of JULY, 1854, at HALF-PAST TEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 7,814 feet in length, or thereabouts, with other works in connection therewith, in Great Lennox-street, Talcomb-row, Coppice-row, Chapel-street, and other streets and places at Shoreditch, Saint Luke's, Old-street, Clerkenwell, and Islington, in the County of Middlesex, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 17th day of JULY. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho square,
Dated this 6th day of July, 1854.

GUILDHALL, 3rd July, 1854.

THE COMMITTEE for LETTING the CITY'S LANDS will meet at Guildhall, on WEDNESDAY, the 12th day of JULY instant, at NINE o'clock precisely, to receive TENDERS for LETTING on LEASE for twenty-one years from Michaelmas, 1854, a HOUSE, No. 81, on the east side of Mark-lane, Peacharch-street. Further particulars and plans may be seen, and forms of Tender obtained, at the Arch tect's Office, Guildhall.

FERDINAND BRAND, Jun. Comptroller.

[For remainder of Contracts see next page.

CONTRACTS.

CARLISLE LOCAL BOARD of HEALTH.—SEWERAGE WORKS.—TO CONTRACTORS, BRICKMAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to undertake the following CONTRACT No. 4.—FOR EXCAVATIONS and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, and other Works.

The drawings, may be examined, and copies of the specification, schedule, bill of quantities, and form of Tender may be obtained, together with any further information required, on application at the Office of the Local Board, Carlisle, or at the Offices of Mr. ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster.

The charge for specification, bill of quantities, &c. will be 5s.

Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before NOON of WEDNESDAY, the 12th day of JULY, endorsed "Tender for Contract No. 4."

ISAAC CARTMELL,
Committee Clerk to the Local Board.

Carlisle, 28th June, 1854.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE SUBURBAN VILLA and VILLAGE ASSOCIATION are ready to receive ESTIMATES for making the ROADS, DRAINAGE, &c. on their Forest-hill Estate, Lee, Kent. Parties wishing to TENDER, are requested to make written application to W. B. MOFFATT, Esq. Architect, No. 2, Adelaide place, who will furnish particulars. Tenders to be sent in, addressed to the Secretary, 66, or before TWO o'clock on TUESDAY, 11th inst.

JOHN SMITH, Secretary.

N.B. Agents to the Association required in town and country. A liberal commission allowed.

GREAT WESTERN RAILWAY MAINTENANCE. The Directors of this Railway Company will receive Tenders for the MAINTENANCE of WAY for the ensuing three years, on the following Contracts, viz

No. 1. READING CONTRACT.—Extending from a point about 1 mile from Paddington Station, terminating at Reading, and including the Windsor, Hungerford and Basingstoke branches, a total length of about 76½ miles.

No. 2. BIRMINGHAM CONTRACT.—Extending from Oxford to Birmingham, a distance of about 67¼ miles.

No. 3. GLOUCESTER CONTRACT.—Extending from a point near the Thame road station to Cheltenham, and including the branch lines at Glouce-ter, a length of about 97 miles.

Specifications may be seen at the Company's Office at Paddington on and after MONDAY, the 10th instant; and the Tenders are to be sent in (addressed to the Secretary at Paddington) before TWELVE o'clock on WEDNESDAY, the 2nd AUGUST next.

By order of the Directors.

1st July, 1854.

ST. GILES-IN-THE FIELDS and ST. GEORGE, BLOOMSBURY.—To SCAVENGERS and CONTRACTORS.—A Vestry Room, that the Committee for Paving, Cleansing, and Lighting these Parishes, will meet at the Vestry-room of St. Giles in the Fields on THURSDAY, the 27th day of JULY next, at TEN o'clock in the forenoon precisely, for RECEIVING PROPOSALS from such persons as may be willing to CONTRACT for TAKING AWAY the DUST and ASHES, &c. from the houses and buildings of the inhabitants of the several squares, streets, and other places in the parishes aforesaid, and for cleansing the roads and the streets and passages thereunto belonging to the Founding Hospital (except), and the 24th day of JUNE next, a copy of the said Tenders are requested at the Vestry room at the time of the meeting. No Tender will be received after TEN o'clock of the morning of the 27th day of JULY next, and no Contractor or Contractors to let or assign his or their contract work, or works, to be done, or any part or parts thereof respectively, without the special consent of the Committee. Security to the satisfaction of the Committee will be required for the performance of the Contract, and the names, places of abode, &c. of the persons to be offered as sureties, to be sent with the proposal sealed. A draft of the Contract may be seen at the Clerk's Office, 21, Hart-street, Bloomsbury-square. The Committee will not bind themselves to accept the lowest Tender, and will require the Contractor for the contract and bond. Payments to be made quarterly. By order of the Committee,

ROBERT FINNIS, Clerk

5th July, 1854.

TO CONTRACTORS FOR ROADS.

PARTIES who can undertake to CONTRACT for the MAKING of about 16 miles of common ROAD, in a granitic (foreign) country, where the rate of labour is cheap, and a certain favourable climate, may address me for further information, WM. YATES FREEBODY, C.E. 9, Duke-street, Westminster. Payments made when given portions of the roads are certified as complete.

TO IRONFOUNDERS, BUILDERS, AND OTHERS.

COKELY-BIGFIELD.—Persons desirous of CONTRACTING for RE-BUILDING this BRIDGE, may see the plans and specification, at my office, No. 3, Chancery-chambers, after THURSDAY next, between the hours of TEN and FOUR. Tenders to be sent to me on or before THURSDAY, JULY 13. The lowest Tender will not necessarily be accepted. Border of the Committee.

J. B. CLACY, Berks County Surveyor.

Reading, July 7, 1854.

Sewers Office, Guildhall, July 4, 1854.

CITY of LONDON CEMETERY.—The Commissioners of Sewers of the City of London, acting as the Burial Board established by an Act of Parliament, will meet at Guildhall, on TUESDAY, the 11th JULY next, at TWELVE o'clock precisely, for the purpose of receiving TENDERS for the ERECTION of the WORKS, WALLS, IRON RAILING, GATE, PARK FENCING, and for the CONSTRUCTION of DRAINS, GULLIES, &c. at the land chosen by the Cemetery Committee for the Burial of the Parishes of the City of London, in the parish of Little Ilford, in the county of Essex. Mr. JESSE HARTLEY, C.E. of 3, Great George-street, Westminster, will attend at the Cemetery, on the 10th day of JULY, at which time and place Tenders will be received. The parties tendering are to state the lowest sum for which they will undertake the whole of the works, and the time in which they will complete the same. Further particulars may be obtained on application at the Cemetery, and the plans and specification seen at the Office of Mr. WILLIAM HAYWOOD, 11, Old Jewry-chambers. Sealed Tenders are to be addressed to the Chairman of the Cemetery Committee, and delivered at the Guildhall Library, not later than one o'clock on the 11th day of July, at which time the Committee will meet to open the Tenders, in the presence of such of the Contractors as may attend. The Committee do not bind themselves to accept the lowest or any Tender, but will require the Contractor to enter into a bond with sufficient sureties for the due performance of the contract. Each Tender must be accompanied by a letter, signed by two householders, engineers, or surveyors, certifying that they have examined the plans and specification, and that they consider the sum at which the Tender is made sufficient for the execution of the works. Tenders must be delivered sealed, and addressed to the Chairman of the Cemetery Committee, at the Guildhall Library, before one o'clock on the 11th day of July, and endorsed "Tender for the City of London Cemetery." Any Tender received after that hour will be rejected.

By order,

WM. BANKS, Secretary.

TO BOARDS OF HEALTH, COMMISSIONERS OF SEWERS, ENGINEERS, ARCHITECTS, DISTRICT AND ROAD SURVEYORS.

AUSTIN'S PATENTED SEWER and CULVERT BLOCKS, BRICKS, DRAIN PIPES, BRANCHINGS, &c. may be inspected at Asphalte and Ord's Wharf, Abingdon-street, Westminster. Trials are requested to prove the merits of the various articles.—Communications, address W. AUSTIN, 37, Holywell-street, Westminster.

THOMAS EDINGTON,
IRON MERCHANT AND CONTRACTOR,
Inventor of Railway Bars and Fastenings,
17, GORDON-STREET, GLASGOW.

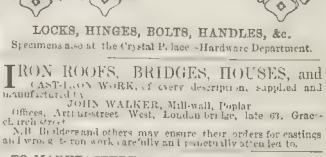
HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, seat doors for the same, hot water pipes, elbows, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No. 6, Bankside, London, near the Southwark-iron-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILEVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000 lb. of water, without materially injuring the finest forms of joinery, the quality of which it improves. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great feel of fuel, hence of gas or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, 9, Victoria-street, Westminster; Vogan, Son, and Raymond, Deckhead, and several maltsters, millers, &c. throughout the country in London and country.—Apply or post to T. BOILEVE, Engineer for French Flour Mills, Turbines, &c. 55, King William street, City.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE, to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

NEW HOUSES OF PARLIAMENT.—DEFRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above buildings. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for one halfpenny. Gas Cooking and Heating Stoves for all purposes, from 1l. DEFRIE'S celebrated DRY GAS METERS, upwards of 100,000 in use. See testimonies at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Euston square.



WARMING by HOT WATER.—J. W. LEAD and CO. KING'S-ROAD CHELSEA. HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to the superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Boges, delivered at a meeting of the Architectural Society, wherein Mr. Boges shows that heating by hot water is the most effective system at present in warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth, throughout the buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at a per cent.

HART AND SON,
IRONMONGERS, MANUFACTURERS, &c.
53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT SELF ADJUSTING DOOR FURNITURE, IN WOOD, CHINA, GLASS, &c.

LOCKS, HINGES, BOLTS, HANDLES, &c.
Specimens also at the Crystal Palace—Hardware Department.

IRON ROOFS, BRIDGES, HOUSES, and LAND WORK, of every description, supplied and manufactured by JOHN WALKER, Mill-wall, Poplar.

Offices, Artillery-street West, London-bridge, late 63, Gracechurch-street.

N.B. Builders and others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Debruck's Patent Autogenous Soldering Apparatus, beg to call the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

NAILS and IRONMONGERY, by the BIRMINGHAM Barrel.

Builders, Contractors, and others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES.

A complete LIST of which will be forwarded on application.

FREDERICK BEATH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

TO GAS COMPANIES, IRON FOUNDERS, &c.

FOR SALE, a small CAST-IRON TANK, about 22½ feet diameter by 9 feet deep, suitable as a tar tank for a large gas works, or for a small telescope gasholder, for which purpose it has been used. The gasholder, columns, girders, &c. will be sold with the tank if required.—Apply to R. WEST, Gas Works, Guildford, Surrey.

GATES and GEORGE, late LUARD, BEEDHAM, and CO. Caen, Aubigny, and General Stone Merchants, Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO having received the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions for temporary agricultural inclosures instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete; specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale street, Manchester.

GEORGE and SAMUEL CUTLER, IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Pitmers, and all descriptions of Gas Apparatus. (Gas works erected complete.) And manufacturers of Corrugate I and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Side Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

THE SMOKE-CONSUMING STOVE invented by Dr. ARNOTT, and explained by him at the Society of Arts on Wednesday, MAY the 10th, insures perfect combustion, economises fuel, improves ventilation, and requires much less attention than the register-stoves in general use, was manufactured by D. and F. BAILEY, 377 and 378, High-holborn, who are prepared to supply new, or adapt old stoves to the principle.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Pin, Bars, Columns and Iron Work, Port Pipes, Ram water Pipes, Gutters, Railing and Palseding Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and completeness of their machines over those now in use, on which they can undertake to guarantee increased power and economy. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine-Work, Cast-iron Goods, and STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office, No. 7, Size-lane, London.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, FELLMONGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE, can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction, has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a slab of artificial stone with ribs of iron; the great strength and rigidity so formed, forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tile, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended by the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction within the ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be had of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Peals, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND BELLS tuned to the Chromatic Scale, with improved Clappers, and Hinged on a new system, which gives a superior tone and facility for ringing.

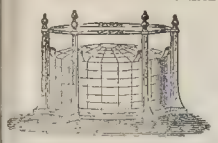
SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments and considerably cheaper.—Apply to Mr. S. BARLOW, 7, Warwick-n, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Ex hange, Manchester.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc: it therefore combines the Softness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 6 inches.

No. 11 Gauge weighs about	16	oz.	per foot super.	
No. 13	"	"	"	20 oz. do. do.
No. 13	"	"	"	22 oz. do. do.
No. 14	"	"	"	26 oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s. 6d

Best fine Cut Clasp and Rose { 18s. 6d. 18s. 6d. 17s. 6d. 17s. 16s 6d.
1½ 1¼ 1 ¾ and ½ inch.

Sash Weights. Air Bricks, 3s. per doz. Hooping for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross. Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 2½d. per inch. Register Stoves from 5d. per inch.

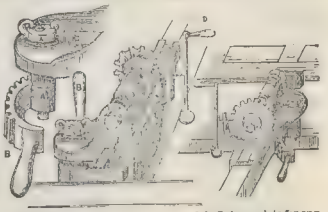
CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.

CHUBBS' PATENT DETECTOR LOCKS give perfect security from false keys and picklocks, and cause detection at once to open them. They are made of all sizes, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.
CHUBBS' PATENT LATCH, for front doors, counting house doors, &c. is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.
CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the falling of the brickwork, timber, &c. in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.
CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.
CHUBB and SON, 57, St. Paul's Churchyard, London.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS', BRASSFOUNDERS, and SOLE MANUFACTURERS of "M'Connell's Registered Model Water Closet." The model I set is the most simple and efficient yet introduced for high services, and for living will out-last any service box, or lever work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

FRANCIS ARDING, Engineer and Iron Founder, Albert Iron Works, Uxbridge, Middlesex, begs to draw the attention of Builders, Contractors, and others to the above useful Machine, manufactured by him, for sifting sand, gravel, lime, ashes &c. by the use of wheel one man and a boy can do the same amount of work as six men using the common sieve.



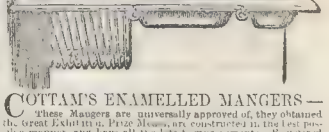
Prices, delivered in London,—

No. 1—3 feet cylinder	£6 6 0
No. 2—3 feet 6 inches cylinder	7 7 0
No. 3—4 feet cylinder	8 8 0

Architectural, structural, engine, and mill castings of every description.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

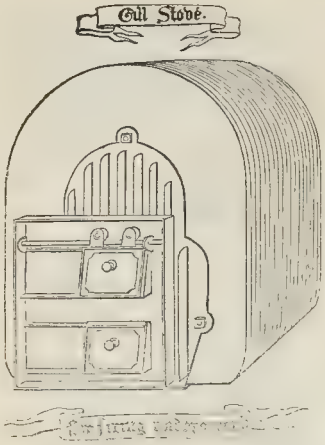
W. BISSELL, PATENTEE,
WOLVERHAMPTON, Manufacturer of Rim and Mortise Locks and Builder's Ironmongery.



AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw fast. Turn the notched lever B in a line the joist, then by turning the handle D, the lever will grasp and fix itself and hold the cramp firm; the greater the strain, the more tightly it acts, owing to its action, will the lever bind. The Patentee, in making the attention of Builders and others, as to the cramp possesses great advantages. It is a new cramp of the best kind, and is well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more in call, is less used than any yet brought out, and at the same time light and portable.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of the description. Also improved Stable Fittings, with Rack, Manger, and Water-trough, attached. New Pattern Manger and Water-trough combined. Ornamental Wrought Mangers. Plain, Enamelled, and Galvanized Stable Furniture of every description. Iron gates, Railings, Hurdles, Sheep and Game Wire Netting, &c. JAMES BARTON, Ironmonger, Smith, &c. 270, Oxford-street, a few doors East of the Pantheon.



BRUCE'S PATENT ECONOMIC STABLE FITTINGS: sole Manufacturers, RANSOME and SIMS, Ipswich. To be seen at their stand, Suffolk Court, Crystal Palace. Drawings and full particulars, post-free. These are the best fittings yet brought out.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements Registered and Patented. Every article in Stable Furniture on show. COTTAM & HALLEN, 9, Winsley-street, Oxford street, London.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELE and STEDDALL'S,
Nos. 5 and 6, BROAD STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

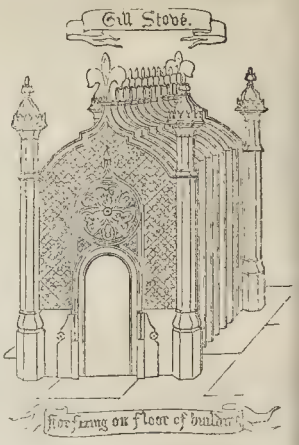
GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (superior Process).—Works at the Regent's Canal entrance, Commercial-road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rainwater, Screwed Gas and Water Pipes, Hooping, Castings, Furnace pots, Bars, Boilers, &c. wholesale retail and for export. Every description of Skaife's Ironwork galvanized, D. Staples, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings on the simplest. J. SKAIFE is sole Agent for Morewood and Rogers's Patent malleable Plumbic Iron, both flat and corrugated, also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

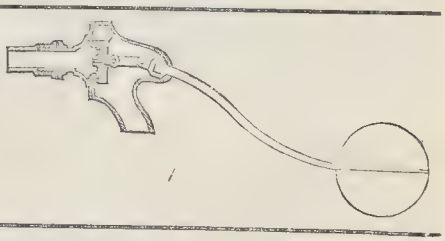
confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

Gill Stove.
Hot Flue
Hot Flue
Hot Flue

PORTABLE HOUSES—ADAPTED TO ALL CLIMATES.



SOLE MANUFACTORY, CLIFT-HOUSE, BRISTOL.

SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

A great variety may be seen at the Works, consisting of Churches, Chapels, Two-storied Hotels, handsome Row of Two-storied Shops and Dwellings, with ·ornices and Verandahs; and many Ornamental Villas. Also, an Emigrant's Home, fitted up complete, with accommodation for Seventy-two Persons, and many ·r Buildings, covering an area of Ten Acres of Ground.

Every Building may be seen perfectly erected previously to its being taken down for shipment. All the Timber-work is dried in extensive Drying-sheds.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and not by any means liable to stick fast, there being no point of friction from first to last in their construction. They are unique as to accumulate the power of closing against the column of water when most required, and are united to stand any known pressure of water.

Complete with Balls:—	½	¾	1	1¼	1½	
Plain shank	5s.	6s.	6s. 6d.	7s. 6d.	8s. 6d.	1 inch. 12s. 6d. each.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 6d.	9s. 6d.	14s. 6d. each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

TYLOR AND SONS, WARWICK-LANE, NEWGATE-STREET, LONDON.

J. TYLOR AND SON'S BATH APPARATUS.

FIG. 2.

To heat a Supply of Water for a Bath from an open Fire in a Hall, or any Apartment, either below or on the same level as the Bath.

A. Copper Saddle Boiler.

B.B. Stove Front, which covers the face of Boiler, and entirely conceals it from view.

In order to set the Boiler to the greatest advantage, a 4-inch Flue, if practicable, should be carried over it and stopped off along the middle of both sides (see fig. 2), to within about 6 inches of the front. The Fire will pass from the back, along the sides, over the top, and up the chimney at the back (see fig. 2). Nearly the whole of the boiler is thus exposed to the action of the fire.

For the convenience of cleaning the Flues, the Stove Front being screwed up can be readily taken down.

C. Cistern for Hot Water, having a small Feed Cistern *E*, supplied from the Cold Cistern *D*.

This Cistern can be made of Tinned Iron or any suitable material and fixed in a Water-closet as shown in engraving, or in any convenient position.

The overflow can be carried into waste of Bath, or any convenient outlet.

F. Copper or Tinned Iron Bath, having three Pipes for Hot, Cold, and Waste Water, as indicated by the engraved levers on the cocks. The overflow is carried into Waste Pipe.

G. Inch Pipe from top Pipe of Boiler, and standing up 6 inches above bottom of Cistern. A branch from this Pipe supplies the Bath with Hot water.

H. Inch Pipe from side of Boiler to bottom of Hot Cistern.

These Pipes *G* and *H* should be cased in and well packed with sawdust, to prevent the heat being given off to the atmosphere.

I. Inch Pipe to supply Cold Water to Bath.

K. Inch Pipe to carry Waste Water from Bath into Soil Pipe, or other convenient outlet, and must be well trapped before entering a drain.

For particulars of Shower Baths, and estimates for fixing ditto, see Catalogue.
Illustrated Catalogue showing every method of fixing Warm Baths, to be had on application.

J. TYLOR and SONS, Warwick-lane, Newgate-street, London.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV. in much excess, Italian and Greek, Renaissance, and many modified characters, variety, and to any degree of cost; Italian and Gothic Dados, in many designs. Door-caps, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich [illegible] of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the trade of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames tables, window cornices, screens, candelabras, and the whole range of accompaniments to reception rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

M. AND N. HANHART, LITHOGRAPHERS,

64, CHARLOTTE-STREET, RATHBONE-PLACE, LONDON,

Beg to announce that they continue to execute orders in every branch connected with their Art, and being in daily intercourse with the most eminent Artists in London, any Drawings entrusted to them will meet with that careful attention which is necessary for success.

PORTRAITS FROM LIFE TAKEN UPON STONE, OR COPIED FROM OIL, WATER-COLOUR, AND OTHER DRAWINGS.

Copies from Daguerreotypes, and all other Photographic Productions, executed upon Stone the size of the Originals, or enlarged.

OIL PAINTINGS AND WATER-COLOUR DRAWINGS ACCURATELY IMITATED.

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,

14, Waterloo-place, London and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.

RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy Chairman.

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Baily, esq.	Robert Francis Power, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Smith, esq.
John Frederick Lewis, esq.	Frederick Vaux, esq.
James John Mechi, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders under the sole and immediate superintendence and control. The profits are divided annually, thereby giving a reduction of the current premiums. Policyholders also participate in the profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the premiums in the ordinary branch exceeded those effected in any previous year, the number of Policies issued being between five and six hundred, whereby the annual income has been augmented to the extent of £15,000, when the violation of the cholera took place, the claims arising from deaths were extremely small, and below their estimate in amount.

The Directors, in presenting the Report, felt satisfied with the Results and received unanimous vote of a Reversionary Bonus of per Cent. to be made in the current years Premiums (payable by all Policies now entitled to participate in profits).

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reversionary

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 5l per cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	26 13 4	8 5 8	18 7 8
40	1,000	34 18 4	11 11 8	23 6 8
50	1,000	48 16 8	15 5 8	33 10 0
60	1,000	73 17 6	24 18 6	48 19 0

A. R. IRVINE, Managing Director

14, Waterloo-place, London

WESTMINSTER FIRE OFFICE.

Chief Offices—27, King-street, Covent-garden, London.

Established 1717.

Rates of Premium moderate

Short-period Policies granted.

Losses promptly and liberally settled.

WESTMINSTER AND GENERAL LIFE ASSOCIATION

Offices—27, King-street, Covent-garden, London. Established 1836.

Life Assurance in all its branches effected.

Bonuses, after Profits, added to the Sums assured.

A Division of Profits every Five Years.

The Bonuses hitherto have amounted to One-half the Premiums Paid each year.

Assurances without profits at reduced rates.

Advances made respecting either Fire or Life Insurance, with power to grant Loans on Freehold property, to be obtained on application to the Office.

W. M. BROWNE, Secretary and Actuary.

Agents required in the principal Country Towns.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in [illegible]

SAMUEL HIBBERT, Esq. Chairman.

WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

The SCALE OF PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risks.

Policies, for 50 per cent. of the profits, are assigned to parties who, after one year and may be applied to increase the sum insured, or to immediate payment in cash, or to the reduction of the amount of future premiums.

One-third of the premiums on assurances of 500l and upwards, for the whole term of life, may remain as a loan upon the policies, at 5 per cent. per annum, if desired by the assured, and the security of the policy be deemed sufficient by the Directors.

SPECIALITY.—Those who effect insurances with this Company will have the advantage of a special class of profits, which will be declared triennially, for the risk incurred by members of Mutual Societies.

The Report on the financial condition of the Company, exclusive of the Bonus now added, and invested capital, will be seen by the following abstract:—

Sum assured by the Policies, with the same assured, including Bonus added, amounted to	£2,300,000
The premium fund to more than	800,000
Annual income from premiums to	100,000
Income from interest, &c.	30,000

Insurances without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary

60	2 2 4	2 17 0	6 2 0	6 0 11

MUTUAL BRANCH.

Assurers on the Bonus system are entitled, at the end of five years, and afterwards annually, to participate in four-fifths, or 80 per cent. of the profits.

The profits assigned to each policy can be added to the sum assured applied in the reduction of the annual premium, or be received in cash.

At the first division a return of 20 per cent. in cash on the premiums paid was declared; this will allow a permanent reduction in the future annual payments for life of from 33 to 71 per cent. according to the age, and a reversionary increase varying from 66 to 85 per cent. on the premiums, or from 1 to 3 per cent. on the sum assured.

One-half of the "whole-term" premium may remain on credit for seven years, or one-third of the premium may remain for life as a debt upon the policy at 5 per cent. or may be paid off at any time without notice.

Claims paid three month after proofs have been approved.

Loans upon approved security.

No charge for Policy Stamps.

Medical attendants paid for their reports.

Persons may travel to or reside in any part of Europe or British North America without extra charge.

The Board meets at 1 o'clock every day at Throgmorton-street, at a quarter before two o'clock.

E. BATES, Resident Director.

MESSRS. GALLI and COTTI, Ornamental

Head-room, second floor.

NOTICE to INVENTORS.—New Patent

Law.—PATENT OFFICE, 4, Trafalgar-square, Charing-cross. The "Circular of Information," and plain instructions for the procuring of Patents at Home or Abroad, may be had gratis, by application personally, or by letter, pre-paid, to Messrs. PRINCE and Co., Chief Clerk.

DECORATIVE & ARTISTIC PAINTING.—

Messrs. BELSEN and KUCKUCK, Artistic Decorators to His Majesty the King of Hanover, and executors of the Royal and Count Borchgrave Renaissance, and the centre panel of the Italian Gallery, Osborne, beg to inform the public that they have removed from 1, Piccadilly, to 58, Pall-mall, and extensively increased their establishment.—Address, BELSEN and KUCKUCK, 58, Pall-mall, London.

QUANTITIES, Measurements, Dilapidation

Surveys, Building Accounts, Land Surveys, &c. Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find a prompt and valuable assistant to [illegible] business of the valuer, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane and Act Court.

TABLES for the use of ARCHITECTS,

Surveyors, Builders, Mahogany, Deal, and Timber Merchants, &c. in Present Materials in Rough from the Actual thicknesses therefrom, in day accounts, or as found out in every description of Joiners' Work, &c.

By JAMES WARE, Building Surveyor, Derby.

Price 6s. May be had of Messrs. J. and F. MOXLEY, 3, Paternoster-row, London; of W. HORSLEY, Sadlergate-bridge, Derby; and of all Booksellers; or from the Author, 20, Abbeystreet, Derby, on receipt of the amount in postage-stamps.

This day is published, handsomely bound, with Illustrations and Plans, &c. price Half-a-Crown.

BUXTON and the PEAK of DERBYSHIRE.

A Handbook to the Peak of Derbyshire and to the Use of the Buxton Mineral Waters.

By WILLIAM HENRY ROBERTSON, M.D. Senior Physician to the Buxton Bath Charity.

This forms a complete guide to Buxton in 1854; and includes Plans of the Peak and of the surrounding neighbourhood, with a Directory of the Distances, Routes, Hotels, &c.

Also a BOTANICAL APPENDIX. By Miss HAWKINS.

BRADBURY and EVANS, 11, Bouverie-street, London; to be had of all Booksellers, and at all Railway Stations.

THE QUARTERLY REVIEW,

No. CLXXXIX. will be published on THURSDAY next.

CONTENTS:

I. THE HOUSE OF COMMONS.
II. MILMAN'S HISTORY of LATIN CHRISTIANITY.
III. THE DEANS.
IV. CLASSICAL DICTIONARIES.

This day, in 8vo. with frontispiece, price 9s.

THE POETRY of CHRISTIAN ART

Translated from the French of A. F. RIO.

"To M. Rio's charming and eloquent exposition of Christian art I refer with ever-new delight."—*Mrs. Jameson's Sacred and Legendary Art.*

London: THOMAS BOSWORTH, 215, Regent-street.

THE FREEMASONS' QUARTERLY

MAGAZINE. New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent in receipt of six postage-stamps (the cost of postage). No. V. for April, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and K. SPENCER, 65, High Holborn.

CRYSTAL PALACE, 1854.—

The OFFICIAL GUIDE and HAND BOOK, in which all the Contents of the Exhibition are now on sale and may be had separately, at prices varying from threepence to eighteenpence; or handsome bound in 3 vols. price 4s. 6d. each. To be had at the Palace and all Railway Bookstalls and Railway Stations and of

BRADBURY and EVANS, Printers and Publishers to the Crystal Palace Company, 11, Bouverie-street.

ARCHITECTURAL PUBLICATION

SOCIETY Instituted 1848. Copies of the works for [illegible] and one [illegible] for new subscribers. The DICTIONARY OF ARCHITECTURE commenced for the year 1853, is supplied to members on payment of the annual subscription of one guinea.

Treasurer, THOMAS L. DONALDSON, Bolton Gardens, Russell-square.

Honorary Secretary, WYATT PAPWORTH, Esq. 11, Grenville-street, from whom a list of the works issued can be obtained.

The Builder.

SATURDAY, JULY 8, 1854.

E resume our notes on and in the architectural portions of the Crystal Palace at Sydenham, confining ourselves on the present occasion to the Byzantine nd Alhambra Courts.

Although objections—unreasonable as we tely thought have been made, to supposed eviation from chronological order in the repre-ntations of styles of art at Sydenham, the rcumstance of the relative positions of the wo "Courts" now to be noticed seems to ave attracted no attention. We however must gret, that an erroneous first impression will evitably be given to many, by finding the Sara-nic style apparently put forth as the imme-ate successor of the Roman.

The whole period of time, from the change of the at of empire by Constantine, about the year 330, to the thirteenth century, is one in regard to hich popular information is very deficient; and en amongst those who have paid some atten-n to the history of art, the characteristics d the sequence of the sub-divisions and off-oots of the Romanesque and Byzantine styles, e imperfectly comprehended. It has, indeed, t been easy to grasp the facts of the state of urope during "the dark ages," even with the l of the light thrown upon them by the great ork of Gibbon.

Although, during this long succession of years. ere was a time when art and learning in their cient seats seemed to have passed from the orld—although the end of all terrestrial things s the veritable belief of Europe in the tenth ntury, yet momentous influences were at work. fficult as may be the analysis of these, with-t it the rise and progress of the Gothic ystem of architecture, and other important diæval styles, cannot be understood. The ctual illustrative reflection of written history d architectural forms, is, indeed in no case, re appreciable. Every landmark of chronology however, required to apprehend the opera-n of changes which extended throughout the ions of Europe, in singular opposition to what uld forcibly strike the modern student—structions to communication by sea and land, lely different forms of religion, war and internal nmotion, and generally a low state of learn-, civilization, and art. If an erroneous im-ssion of one of the most important facts of ch a period be presented at the outset, the uirer will make many other mistakes before is set right.

The facts of the progress should, therefore re been adhered to, and the representation of Saracenic style should have occupied the ce of the Romanesque and Byzantine Court;" and the latter could then have been oed in proper order. The Saracenic style, re than any other, is not to be viewed as ring an independent course. It is now beyond estion that from it the arch of the Gothic s derived, and that its main elements con-uted to the production of the Renaissance. e Alhambra, however—not commenced till the ddle of the thirteenth century, and not com-ted till the beginning of the fourteenth,—carcely the best example of the Saracenic n of Byzantine influence.

We think it the more important to direct ention to this branch of architectural history, the Handbook to the Byzantine Court, ad-able as it is, leaves this point of the manner growth, and the character of the Saracenic c, barely referred to; and Mr. Owen Jones has chosen to give us a description of the Alhambra, with useful remarks on principles of decoration,—still without taking up the dropped link. The omission was one of editorship; but the facts, under the circumstance of the inverted order of the "Courts," should have been placed beyond the possibility of misconception. The General Handbook, explanatory of styles of architecture, has, indeed, to be written. That to the building is hardly addressed to the class of inquirers we are thinking of.

We have, however, been much gratified both with what has been reproduced at Sydenham, and with the literary labours of Messrs. Wyatt, and Waring, and Owen Jones. To include so much as we find, was, no doubt, a very difficult task. We would suggest, in future editions of the Books, lists of the works illustrative of each style, similar to the list in Mr. Scharf's "Handbook to the Roman Court." Tabular statements of chronology, and lists of buildings and architects, would also be of service.

The knowledge of the Byzantine and Romanesque styles should be gained from such works as those of Hope and Gally Knight, *as well as* from the Court itself. The "Ecclesiastical Architecture of Italy," will be found useful in understanding the features of the early Romanesque—to which, perhaps necessarily, little attention has been given; and the notice of the same work in the *Quarterly Review* of March, 1845, supplies, by small plans, a very necessary element for the understanding of changes which sprang from the modifications of ritual.

The early Christian churches were built in one or other of two forms—either that of the circle or the oblong,—in both cases, the columns being internal. The plan of the old Roman basilica was adopted in the latter case, and it is curious that the transept, which soon appeared in the plan, is shadowed forth also in the Pagan buildings. The principal new features in the interior were the arches springing directly from the capitals of the columns, and the absence of decoration to the wooden roof. The apse had existed previously. When the seat of empire was changed, the Romanesque style, left unaltered in Rome, received the addition of some marked features in Constantinople, which, from that time, became the centre to which we must trace the architecture of every part of Europe. Even Italy itself received a new contribution from the land of Greece. Constantine had transported works of Roman art to Byzantium,—as before, Paulus Æmilius, and Mummius, and Pompey, had transported Greek works to Rome. The original Greek element had, under the Romans, become overwhelmed with the very grossness of luxury, and the elaboration of ornament at last nauseated itself to inanity; but, once free from the constant presence of Roman tradition, and progress recommenced: it proceeded by slow stages, in which it developed few elements; but it had the principle of life. Rejecting the oblong plan, the circle within the square was crowned by a mighty dome, and the angles of the square by smaller domes, and a predominance of circular forms was also remarkable. The plan was adhered to—all the more determinedly, in the East—from the schism between the pope of Rome and the patriarch of Constantinople. The most remarkable example is the church of Santa Sophia, erected in the reign of Justinian, having been commenced about the year 532 and completed in 548.

The Byzantine form of Romanesque was, at the same time, carried to Italy. Ravenna, not Rome, was now the seat of government, and here—about the year 530, as the Handbook says, but much later in the reign of Justinian, according to, in this case, more reliable authorities—was built the interesting church of San Vitale, with its curious dome—a building which had the greatest influence, not only in developing the architecture of the Lombards, but also in the dissemination of Byzantine forms, at a later date, through the Rhine country—the cathedral of Charlemagne at Aix-la-Chapelle being built upon this especial model. The commercial activity of Venice led to the introduction of Byzantine art into that city, as seen in the churches of Torcello and in the later cathedral of St. Mark. In France, in the tenth century, a Venetian colony at Perigueux erected a cathedral, in which the general arrangement and the domes of the churches of Santa Sophia and St. Mark, were again reproduced. The same influence extended to the recesses of Scandinavia, and even in Ireland, long antecedent to any native development in England, a school of art of great excellence would appear to have proceeded in some way or other, from the same source. The circular plan and Romanesque forms are even found in Rhode Island, across the Atlantic, where recent investigations have tracked the Scandinavian discoverers of "Vinland."

The dissemination of Byzantine forms had begun at an early date. The controversies about images, and the fury of the Iconoclasts did not extinguish the love of ornament which had become characteristic of the Greek people. The persecuted artists carried their skill over the whole continent of Europe, and subordinating ability to design, and their skill in processes of art, to other conditions of ritual and opinion, gave birth to styles—varying in character, yet still obviously referable to the same origin.

Christian art, which rose in the catacombs, had been at first symbolic, and as a principle rejected that which was pagan. It is true that a common opinion that such rejection was universal is not correct; and it is not unfrequent to find the sarcophagus embellished with relievos illustrative of pagan ideas, made the receptacle for the body of a Christian martyr. Statues of the deities of Greece and Rome were defaced and buried; but wherever the form did not immediately suggest Pagan worship, there seems to have been no hesitation about adopting it: the association was thought to be removed by the introduction of a Christian emblem, or by consecration or purification. Moreover, there seems to have been little scruple about adopting what might be thought to suggest, indifferently, either of the two forms of belief. Where slight ability in art-workmanship had been attained, there was some temptation to use what was at hand. Indeed, much of the sculptural and pictorial expression of the new faith seems to have been specially designed in accordance with pagan notions, so as to avoid a violent revolution of ideas, and so rather to enlist converts. The *nimbus* or "glory" round the heads of the persons of the Trinity and saints, was derived from the pagan sculpture.

But, Christian symbolism became the chief characteristic of Byzantine art, and the five domes of the churches may even have been derived from the *nimbi* of Christ and the four evangelists. The Byzantine ornament is chiefly made up of adaptations of old Roman forms, and of the lily. The interlaced work is variously interpreted. Carved into the representations of twisted serpents and lacertine forms, it is found throughout the north of Europe, and it became the chief feature in the Saracenic architecture. In Irish art it is generally found, and is even more remarkable amongst the interesting works in the Isle of Man.

When the artists of Constantinople fled from persecution at home, they were received, amongst other nations, by the Saracens. The result of the connection thus established, was a new style of architecture. It will be seen that the obvious Christian emblems of the Byzantine style had to be rejected: for, all

representation of life was interdicted by Mahometans. Natural leaves, indeed, were the origin of forms, but highly conventionalized. A new element was brought into play in the profuse introduction of inscriptions. The polychromatic decoration which had become characteristic of the Byzantine style, was appreciated by a people remarkable for the richness of their costume, and the wealth and magnificence of their caliphs. The mosques of Cairo are the best examples of the architecture of the Saracens. The mosque of Amrou has, perhaps, the earliest form of the pointed arch, and dates as early as A.D. 641.

Of all the developments of the Byzantine architecture, the most interesting are to be found within the island of Sicily. But no works so much require to be examined by the light of an intimate knowledge of history. The political relations of Sicily, says a writer to whom we have referred, differed from those of all other countries of its age:—"a double Christian hierarchy; the *Greek succession*, depressed, but yet subsisting; the Latin succession flourishing, and yet compelled to acknowledge the existence of its rival; whilst the Mullah was still permitted to expound the Moslem law. The diplomas and charters of the sovereign exhibit the Arabic concurrently employed with the two great dialects of the Christian world. Laws and institutions of Byzantium flourished under the descendants of the Norman adventurer, who assumed the garb of the Greek Basileus, whilst the manners and customs of Bagdad or Cordova gave splendour, as well as enervating luxury, to his palace and his throne. Of all these various races, and customs, and modes of thought, mingled and yet not intermixed, the characteristics and tokens are found equally in the palace and in the church. Greek mosaic adorns the apse; 'billet moulding,' and 'dog-tooth moulding,' and 'chevron moulding,' enrich the arch; Cufic inscriptions, in bold and noble characters, declare the praises of the sultan-king."

Such was the condition of Sicily after a new element had been added to the old Greek and Saracenic art. The vigorous race of Northmen, who had colonized Neustria and conquered England, became the masters of the south of Italy and of the island of Sicily. It is scarcely likely that a band of adventurers brought with them more than a recollection of the version of the Romanesque, which prevailed in the land from whence they came; but the Normans readily adopted the form of Byzantine Romanesque on the continent, whilst in Sicily the skill of the native Saracenic workmen, whose practice was founded in Greek theory, together with the pointed arch, were appropriated by them. They also sought artists directly from the Greek capital; and the Cathedral of Monreale, commenced in 1174, is mainly in the style of Constantinople.

The best testimony that the Normans in the south were not artists, is shown by the fact that the round arch was used on the continent, whilst, according to the author of "The Ecclesiastical Architecture of Italy," the *Sicilian* Norman style was Saracenic in its arches, Roman in its pillars and capitals, Byzantine in its cupolas and mosaics, and Norman and Greek (that is, Sicilian Greek) in its enrichments.

So that the extensive influence of the Byzantine Romanesque was accompanied by very marked differences in details, even in countries immediately bordering upon each other. The Lombard architecture spread to the banks of the Rhine, where also Greek artists proceeded direct from Constantinople, but the same style had but slight influence in Rome, where the old forms were constantly maintained. Later in date, that is, in 1063, were commenced the remarkable group of buildings in Pisa, which, though Greek in some of their details, have the character of the Italian Romanesque. The Handbook—perhaps following Vasari, rather than the actual inscription—indeed makes the architect of the Duomo a Greek; but that must be a mistake.

In the difficult task which the architect of the Byzantine Court had to perform, he has given us some of the principal characteristics of the Byzantine styles, but has necessarily omitted many. The forms are principally selected from the Rhenish and German churches, and the pointed ornament and the representations of mosaic, from churches which he has himself studied in Italy and Sicily. We could have wished that real mosaic had been generally adopted. The nature of the original material will not always be apprehended. Real mosaic, we believe, could have been executed by English workmen, and a saving to the Company might have been worth considering; for, the injury done to decorations already by the carelessness of visitors, is precisely what we expressed our apprehension of.

Perhaps the oldest of the antiquities of which casts are exhibited, are the Irish and Manx crosses. They are placed, partly with some other Romanesque examples in the great transept, and partly in the Irish vestibule, as it is called,—one of the three 24-feet squares under the gallery. This vestibule is entered from the transept by the large chancel arch from Tuam Cathedral. Here also is the eastern triplet from Tuam, the Freshford Church door, and the round window from Rahan Church.

The position of the Romanesque Court, at the angle next the north transept, is a fortunate one, and the view through the arcades has a very striking effect. The architecture of the two fronts and the greater part of the interior is very elaborate in colour.—The arcades, and a cloister which occupy the greater part of the Court, have been taken from the cloisters of the Church of St. Mary in Capitolo at Cologne, which were completed at the close of the tenth century. The columns have the bracket capitals characteristic of the style, and decorated with Byzantine foliage and double-headed dracontine animals. The flat interlaced work of the brackets or imposts is of Lombard character. Some of the other more enriched varieties of capitals are placed in other parts of the Court, but we did not notice the common square form. The Romanesque pseudo-Corinthian variety is well illustrated in the capitals of the shafts of the cloister of St. John in the Lateran.

Amongst the painted accessories are portraits of Justinian and Theodora from the church of San Vitale, and others which well illustrate the costume of their respective periods, as also the chief characteristics of Byzantine pictorial art. The columns of the internal façade of the cloister are from Gelnhausen, in Swabia. The shafts are covered with ornament, deeply cut. The arched ceiling is enriched with ornament in colour and gold. The original studies followed in the decorations, were made by Mr. Wyatt, partly from St. Mark's, at Venice, and partly from the cathedral at Monreale. In the portion of the cloisters of St. John in the Lateran, real mosaic has been executed Roman artists having been engaged, under the superintendence of Dr. Emil Braun; but the accuracy of the fitting of pieces, whether resembling Italian examples or not, does not seem to us what would help to justify all that is said in favour of the Italian workmanship. Mr. Owen Jones, in the case of the Alhambra mosaics, argues that a certain irregularity in the original gives advantages not attained by the perfection of modern work. We have heard this reasoning before: it is plausible, and not without some foundation,—yet there is danger in it.

There are some good examples of German and English doorways, although, perhaps, not the best that could have been selected. We might mention that of St. Margaret's Church, York, as in our recollection a better example than what we see, and one which it might be desirable still to procure. The Kilpeck and Shobden doorways, with the monsters in which Mr. G. R. Lewis can discover so much fanciful symbolism, seem to us scarcely to do justice to the Norman artists. A complete series of the ornaments of mouldings, the distinctive characteristic of the style as we have it in England, and in which so much invention was displayed, might, we think, have been desirable. The doorways last referred to, are highly decorated in colour: for this, it is considered that there is sufficient authority. The elaborate bronze doors, with panels filled with scriptural subjects, found in Italy and Germany, are illustrated by examples from Augsburgh and Hildesheim. It is considered that they were in *cast* metal. In the centre of the Court is a copy in Derbyshire marble, of the fountain at the Abbey of Heisterbach, in the neighbourhood of the Drachenfels: it is of very good character, and is supposed to date between the years 1210 and 1233. In this Court also are fac-similes of six effigies of English kings and queens, from Fontevrand: these, as well as an effigy of Richard Cœur de Lion, from Rouen, are restored, with the original colouring of the dresses. The general subject of polychromatic decoration would have been more clear in the Handbook with the aid of a few cuts, showing the Roman and the late Italian varieties of mosaic as well as the Byzantine. The subject is especially worthy of attention in this country where the impurity of our atmosphere and the impurity of our gas together in a very few years quite obscure anything in the shape of painted decoration.

The work of latest date represented, is the ceiling of the upper church at Assisi, painted in fresco by Cimabue between 1240 and 1300. It shows the influence of Greek art even at that late date; though it is otherwise more Gothic than Byzantine. The painted imitation of panelling, on the mouldings, should be noticed.

We cannot look at many interesting objects of small dimensions, and the photographs, which have found place in the galleries, and we have left ourselves no room to do justice to the Alhambra Court. The radiant bloom which there is upon these walls is in common phraseology, a thing to be seen and not described,—or as the Moorish poet has written in the Palace at Granada—"When the spectator has attentively examined my beauty, he will find reality to exceed the most extravagant conceptions of his fancy." Here, indeed, we may "reap the benefit of a commentary on decoration." Book illustrations, valuable as they are, have failed to realize the bare suggestion of what we see. And yet the Court of the Lions, instead of being, as stated in the newspapers, about the same dimensions as the original at Granada, is not half the size, and all that there is at Sydenham is but a small part of the existing remains, which themselves are only a portion, and it is thought not the most elaborate, of the original palace. Besides the Court of the Lions we have the Hall of Justice, the Hall of the Abencerrages, and some other parts in progress, and there is a room appropriated to casts and engravings. The details are of the original size, but the smaller area has required many modifications of plan, and the constructive peculiarities of the original building, as the architect points out, are not shown to the best advantage. As it is, however, and although we have remarked, that in the study of the Saracenic style of architecture, works of earlier date should not be disregarded, we have here an exhibition of Moorish principles of decoration which cannot but prove of great value with relation to the future of English art.

DOORWAY FROM THE PALAZZO PUBBLICO, FERRARA.

THERE are few buildings in Italy that possess so high an interest, both historical and architectural, as the old Palazzi Pubblichi. Though essentially town-halls in the best sense of the term, they are something more than what we in England understand by such an expression. They differ somewhat from the French Hôtel de Ville and the German Rath Hauser. It was in these, in the middle ages, that the rival factions of the popes or emperors used to assemble and declare war—the war, not of nation against nation, but of town against town. These were as it were the parliament houses of small though highly-civilized territories, consisting often only of the town and a few square miles of adjacent country. The law courts were formerly held in these buildings,—in some cases, as at Palermo, are so still. They served as depositories for all the old archives connected with the town, and became a sort of municipal record office. Here are generally the police and passport offices, and often the town jail. If the town be too poor or too indolent to support a fine arts academy of its own, the Palazzo Pubblico will almost always contain a collection of pictures and sometimes a small museum.

DOORWAY, PALAZZO PUBBLICO, FERRARA.

As may readily be imagined, these buildings mostly Gothic, and date from the palmiest s of the Italian republics of the thirteenth fourteenth centuries. The finest examples this date are at Florence, Siena, Piacenza, rugia, Todi, and above all, Gubbio. There is ery fine later example at Salmona, the birthce of Ovid.

The Palazzo Pubblico, of Ferrara, is of nque-cento date, having been built in the s of the rule of the House D'Este. Its s differed probably somewhat from those of more ancient neighbours. Many of the al appendages to an Italian town-hall were ubtless transferred to the castle, while the lazzo Pubblico was probably often adorned the festivity, grace, beauty, and learning of ourt which, at that time, was only rivalled that of Urbino.

The Palazzo Pubblico of Ferrara is an imnse building of warm orange-coloured stone npletely covered with diamond rustics, and rned with elegant Cinque-cento pilasters. A y beautiful balcony is corbelled out at the gle, and in the centre of one of the fronts is curious doorway shown in the engraving.

A. B.

Practical Geometry.—Mr. Edward Blatchley, has designed a case of models, which, coupled h a pamphlet (published by the London Parquetry mpany), is intended for very elementary tuition in ctical geometry. It is proposed that students uld first exercise themselves by finding any given del in the box, by its fac-simile in the pamphlet, rk down its outlines on a sheet of paper, and afterrds find the *rule* for drawing it in the pamphlet.

ON THE INFLUENCE OF SOME EXTERNAL AGENTS ON THE DURABILITY OF BUILDING MATERIALS.*

When the very imperfect state of that part of meteorology which treats of the constituent parts of the atmosphere is considered, it cannot be a matter of surprise that little is known to guide us to any definite conclusions as to the causes which affect the durability of building materials, and to their modes of action even under ordinary circumstances. Experience and tradition are the only authorities upon a subject of such importance; and the rules at present adopted in the selection and employment of the various classes of building materials can hardly be considered other than empirical. In the following article it will, therefore, be my object merely to state what is known and acted upon; and at the same time to call attention to some phenomena which require explanation.

The influence of the atmosphere upon building materials is of a complicated nature: it is chemical, mechanical, and *medial*, under which term are included all the various modifications produced by moisture, heat, and electricity.

The chemical influence, or, in other words, the decomposition determined by chemical affinity, depends, of course, upon the composition of the atmosphere itself, and this is known to vary in an extraordinary manner in different localities. The normal composition of atmospheric air is considered to consist principally of oxygen and nitrogen, in the proportions of 208 of the former to 792 of the latter; but there are also numerous other gases present such as the carbonic acid, ammoniacal, hydrochloric, nitrous, and sulphuric, with sulphuretted hydrogen; the proportions of all which are affected by local causes. Even in the same locality the composition varies with the elevation above the ground, and the application of some theoretical deductions have led to such signal failures, as to justify us in dwelling on the necessity for examining carefully the actual conditions of each position.

It is to Messrs. Dumas and Boussingault that we are indebted for the analysis of the atmosphere quoted above, and from the researches of numerous other philosophers it appears that the proportions of oxygen and azote are constant. Messrs. Boussingault and Levy ascertained that the quantity of carbonic acid gas varied from 3·253 to 2·989 parts of gas (in volume) in 10,000 parts of air, the former result having been obtained at Paris, the latter at Andilly, near Montmorency; but Michael Levy states that the quantity of this gas in suspension varies between 4 and 6 in 10,000, the smaller quantity being that most frequently found in the open country. Carburetted hydrogen is found most abundantly in the neighbourhood of marshes; nitrous acid gas in districts which are subject to violent storms, and it is supposed to be generated by the decomposition of azote by electrical action. M. Fresenius (Ann. de Chim. 1849, p. 208) states that he found the proportion of ammonia in the air to be in 100,000 parts in volume, 0·133 ammonia, 0·205 oxide of ammonium, and 0·379 carbonate of ammonia. But M. Boussingault's observations upon the quantities of ammonia in rain water show that it varies notably according to the position, from 1 to 5·45. Under all circumstances the air of the night is richer in ammonia than that of the day, a fact which may be accounted for by the theory of the nutrition of plants, and the precipitation of ammonia by the early morning dews.

M. Chevalier ("Journal de Pharmacie," 1835) found that the atmosphere of London contained sulphuric acid, generated, no doubt, by the combustion of coal. The same author also observed that the atmosphere of Paris contained the acetate and the hydro-sulphate of ammonia, which are to be attributed to the exhalations from the numerous cesspools of that town. M. Vogel, of Munich, has the merit of having ascertained the presence of hydrochloric acid in the atmosphere surrounding the waters of the Baltic and the Mediterranean. The action of the sea breezes upon some building materials, to which I shall have occasion hereafter to refer, appears to prove that this gas is not confined to these seas. As it is furnished by the evaporation of the ocean, it necessarily varies in quantity according to the season; and we may also suspect that other deleterious gases are from time to time suspended in the atmosphere, though their existence can hardly be demonstrated on account of their minute proportions.

The meteorological conditions of the atmosphere are subject to periodical variations, and they have distinctly marked phases of day and night, unless extraordinary phenomena occur. Thus, in clear weather, the atmosphere attains two maxima and two minima in its electrical state; the first maximum being between seven and nine in the morning, and the second between seven and nine in the evening; the first minimum about four in the morning, and the second between five and ten in the evening; but it must be observed that its hygrometric state frequently modifies these periods. The intensity of the sun's light, and necessarily of its actinic influence, has its maximum rather before mid-day, and two minima corresponding nearly with the periods of twilight. A maximum occurs in the temperature about two o'clock in the afternoon upon the average of the year, but there is a slight irregularity according to the seasons: a minimum occurs, generally speaking, when the sun occupies a position about 14° 47′ below the horizon, according to M. Bouvard's observations in Paris: the period of mean temperature varies in the different months. The atmosphere is driest about mid-day, and contains the greatest amount of moisture at night: the deposition of

* By Mr. George R. Burnell, C.E. Read at the ordinary General Meeting of the Royal Institute of British Architects, June 5th.

dew takes place to the greatest extent between midnight and sunrise, on account of the greater cold which then prevails. In our latitudes the disturbances of the barometric action are not marked by any regularity; but there is a tendency to increase in the morning, when the barometer generally rises: it falls about midday, rises again about sunset, and falls once more about midnight. It may, in fact, be considered that the meteorological fluctuations of every day are affected by the relative positions of the sun and the earth, and that they correspond more or less closely with the cardinal positions of the former at rising and setting, at mid-day and midnight.

The mean temperature of London throughout the year is 50° 50′, whilst that of the surrounding country is 48° 50′. The thermometer very rarely rises above 96°, and the greatest cold hitherto recorded in our metropolis is 5° below Zero. The mean barometric range amounts only to 2·07in.

One of the most important conditions of the atmosphere depends upon the rate of evaporation, and the amount of humidity in suspension; and the intensity of these agents is greatest at directly opposite seasons of the year. Evaporation is greatest in summer, and least in winter: the reverse takes place with respect to humidity. Mr. Daniell estimated the mean evaporation in the neighbourhood of London at 23·974 inches per annum, ranging in the various months from about half an inch in January and December to 3¾ inches in June, and 3¼ inches in July. Supposing the complete saturation of the atmosphere to be represented by 100; the humidity of the months of December, January, and February will then be expressed by 92. In the intervening months the humidity diminishes with tolerable regularity to the minimum of 78 at the end of June, except in the month of May, when a trifling irregularity occurs. It thus happens that the greatest amount of moisture is suspended in the air, to be absorbed by porous materials, precisely at the season of diminished temperature and exposure to the attacks of frost; while evaporation takes place at the period when the conditions of temperature are most favourable to the production and development of the salts by the previously absorbed moisture acting on the earthy bases.

Such we may consider the general properties of the atmosphere likely to affect the conditions of building materials, and we may trace their influence under circumstances apparently very dissimilar.

The various external agents produce effects, either by the new combinations they superinduce between the earthy bases, the metals, and the metalloids of the different classes of building materials and the gases they contain, or by the solution and removal of the combinations previously existing. There are few, indeed we may almost say that there are no conditions either of organic or inorganic chemistry which can be considered permanent; and as the gradual decay of rocks is a law of nature everywhere, and inevitably at work to renew the face of the world by apparent destruction, it is not to be expected that the insignificant quantities we deal with can be exempt from similar laws. The consideration of the circumstances attending the formation of the new compounds of oxygen, hydrogen, carbonic, ammoniacal, and hydrochloric gases with the bases above mentioned, with the action of the fermentation of woody sap, would lead to a lengthened investigation of the most abstruse branches of chemistry. The importance, however, of these compounds cannot be too strongly insisted upon, nor can the attention of scientific men be too decidedly called to them. Sometimes they act to destroy, at others to consolidate; but in all their influence is very marked, and calls for serious consideration from the architect. Limes, cements, and some descriptions of building stones, when properly employed, gain in strength and durability by the slow, but sure, action of the air. When injudiciously employed they rapidly decay, through the decomposition to which that element gives rise, or the mechanical agents to which it serves as a medium; while the destruction of the metallic or the organized matters employed is equally occasioned by the same cause. I shall now proceed to point out the various phenomena exhibited by the respective classes of building materials usually employed in London, not attempting, however, more than a very general description of a subject so vast and at the same time so complicated.

Granites present many varieties, differing greatly in their composition and the mechanical arrangement of their elements. Those from Devonshire and Cornwall contain a large proportion of schorl, and are frequently pervaded by masses of felspar, of such dimensions and so distinctly crystallized, as to cause them to assume a porphyritic character. According to Sir H. De la Beche, the granites of Ireland are of the same character, but the schorl occurs in smaller proportions. The granites of Aberdeenshire are more decidedly micaceous, and schorl is rarely found in them: they also differ from those of England and Ireland, in having their component parts more equal in volume, and more evenly distributed. In some cases hornblende takes the place of mica, and in others the quartz and the felspar are both so much affected in colour by the presence, doubtless, of hydrous oxide of iron, as to give a general rosy hue to the whole mass. An instance of this is the well-known granite of Peterhead. The granites of Guernsey, Jersey, and the Isles Chaussey, which are occasionally brought into the London market, resemble those of Cornwall; and, indeed, M'Culloch, in his "Classification of Rocks," states that they pass into the same variety. Their appearance is, however, sometimes diversified by the occurrence of large imperfectly shaped crystals of compact felspar, which give the whole mass either a greenish tinge, as in the case of the Guernsey, or a rosy one, as in that of the Jersey granite.

The decomposition of granites takes place from the action of the atmosphere upon their constituent particles. "The quartz is almost pure silicious earth in a crystalline form. The felspar and mica are very compounded substances: both contain silica, alumina, and oxide of iron. In the felspar there is usually lime and potassa; in the mica, lime and magnesia. When a granitic rock of this kind has been long exposed to the influence of air and water, the lime and the potassa contained in its constituent parts are acted upon by water and carbonic acid; and the oxide of iron, which is almost always in its least oxidized state, or in that of the protoxide, tends to combine with more oxygen: the consequence is that the felspar decomposes, and likewise the mica, but the first the more rapidly." Such are the words in which Sir H. Davy ("Agricultural Chemistry," p. 189) describes the mode of decomposition of granites; and they may be taken to express the present state of science so far as the granites usually employed in England are concerned. But there appear to be different conditions in the combinations of the bases of felspar which give rise to some apparent anomalies. Thus, the Egyptian porphyries, which contain a notable excess of rose-coloured felspar, resist the influence of the atmosphere in an extraordinary manner. Possibly this may be accounted for by the closeness of the grain (so to speak), which would, to a certain extent, prevent atmospheric moisture from communicating with anything beyond the immediate surface; or the more simple character of some of these porphyritic rocks may be favourable to their preservation; whereas the different rates of expansion of the ingredients must have a material mechanical influence in disintegrating rocks when they exist in considerable numbers. The difference between the rapid rate of decomposition of the porphyritic granites of Spain, Brittany, and Cornwall, and that of the Egyptian specimens appear to justify the inference that the cause last suggested has great influence upon their durability. The former are, in fact, composed of a greater number of ingredients than the latter, in which both mica and hornblende are wanting.

Practically it is found that the uniform character of the Aberdeen granites resists atmospheric influences in our latitude better than the more easily worked stones of Devonshire and Cornwall.

It may, perhaps, be as well to call attention to the fact that the modern application of the term "porphyry" is in some cases inconsistent with its derivation; the *grey* granites of Devonshire, Cornwall, and the N.W. of Spain, being occasionally called porphyritic, as well as the *purple* felspathic rock of Egypt. The latter is almost entirely composed of felspar, with occasional crystals of amphibole and quartz; but the colour is entirely owing to the felspar, which is of a beautiful purple occasioned by the presence of a large proportion of the hydrous oxide of iron. Ophite (green antique porphyry) and melaphyre (black porphyry) are instances of a similar disregard for the derivation of a generic name. A description of granite, known to mineralogists by the name Syenite, was also much used by the ancient Egyptians: it is remarkable for having the mica replaced by hornblendish amphibole, and is of a rose colour. The atmosphere does not appear to have much action upon this variety, at least in Egypt, if we may judge by the state of Pompey's Pillar and Cleopatra's Needle.

Whinstones, or basalts, become disintegrated unequally under the effects of exposure to the atmosphere, in consequence of the variable proportions of felspar they contain, and perhaps also of the particular combinations of alumina, lime, and magnesia, which, in connection with silica, constitute their base. If any potassa be present in combination with the silica in the shape of felspar, the action is more rapid than under ordinary circumstances, the humidity of the atmosphere decomposing the felspar into two substances, one of which is soluble, and easily removed by succeeding rains. Serpentines, and the diallage rocks, which are silicates of magnesia combined with hydrates of that base, yield easily to the attacks of acids when the silicates are in certain proportions, and alumina is present. The most beautiful varieties of these materials employed in the arts are obtained from the environs of Genoa, and from Zœblitz in Saxony; but it is much to be feared that the atmosphere of large towns, especially when containing sulphuric acid gas from the combustion of coal, renders the employment of even the best of these decorative materials very hazardous. It appears also that in parting with their water of crystallization upon exposure to the air, an unequal contraction takes place in the constituent parts of the serpentine obtained in certain localities, which in consequence breaks in an irregular manner.

The next description of building materials to be considered, in following the ascensional order of the geological series, are the slate rocks. Those worked for the supply of the London market are principally situated in North Wales, Cumberland, and Westmoreland, the former being a tolerably homogeneous clay slate, the latter being much more chloritic. Exposed freely to the action of the atmosphere both varieties appear to be tolerably durable, but Westmoreland slates decay very rapidly in damp positions, when the air around them is not frequently renewed. They decay, in fact, in the covered parts, probably from the decomposition of the silicate of iron, to which they owe their peculiar colour. The combination of silica and alumina in the Welsh slates appears to be more stable than that which prevails in any other material of the same nature; for their powers of resistance to atmospheric influences are greater than those of any slates employed in Western Europe or North America. As a general rule, the denser the slate the more durable it will be; and the most important condition to be observed in its use is, that water should not be allowed to percolate between the edges of the strata. Practically it is found that the smoother the surfaces of the slates, and the closer they lie, the greater is the pitch requisite to be given to the roof; because, under such circumstances, capillary action takes effect to a greater extent than when the slates present irregular and perceptibly large intervals.

The various sandstones, millstone grits, and conglomerates, are affected by the atmosphere, either through the decomposition of the material cementing their particles together, or by the mechanical effects of moisture. These last may consist, either in the removal of the cementing material, or in the destruction of the

cohesion of the particles by the expansion of the water in freezing. Many of the sandstones occur in regular layers, separated by thin films of a species of clay, as in the common Yorkshire flagstones, and when these films are sufficiently thick to offer an efficient resistance to the passage of water, to retain it, in fact, under the upper shale, the expansion during frost will almost inevitably destroy the stone. If the water should change its form from other causes, such as heat, the same effect will be produced; and it is therefore found that the Yorkshire stones of a very porous, and at the same time of a very fissile character, are unable to resist the extremes either of cold or heat. The best materials of this description are those of a homogeneous nature—such as the Park Spring, the Idle, and the Darley Dale stones, in all of which the minute subdivisions disappear, and the mass may be described as consisting of an assemblage of distinct molecules of similar nature, united by mechanical juxta-position.

The sandstones, in which the silicious molecules are united by a calcareous cement, are far more susceptible of decomposition than those united by a silicious cement, for it appears that in the former cases the chemical combination is rarely effected between the lime and the silica; as the latter is not in the state known as free silica, nor such as can easily form combinations with other materials. In the case of some of the millstone grits, however, the cementing substance, which is silicious, forms so energetic a combination with the molecules it envelopes, that both resist the action of external causes in an equal manner, and the durability of the Bramley Fall stone may fairly be compared even to that of granite itself. These remarks may be extended to the conglomerates, in all essential respects at least, because, in fact, generally speaking, they differ from the millstone grits only in the size of their elements.

The crystalline marbles vary in such a very marked manner, both in the nature and the proportions of some of their constituents, and they have been so modified by the accidental circumstances of their geological position, that it is more than usually difficult to trace the laws of their decomposition under the action of atmospheric causes. In many instances they are traversed by veins filled in with more perfectly defined crystals of the base of the rock, or the fissures caused by these veins are filled in with extraneous matters, such as clay, and sometimes even with minerals. Again, however regular the structure of the mass may seem, there is always a tendency in the more crystalline rocks to assume a distinct cleavage, which is often different from the direction of the planes of stratification. Under such circumstances, the moisture furnished by the atmosphere either furnishes the elements necessary for the decomposition of the materials introduced into the veins, or by the mechanical effects it produces in consequence of the changes of temperature, disintegrates the mass. The former class of phenomena may be most distinctly observed in the Breccias, or such marbles as the Brocatello and the Oriental Jasper: the white marbles very frequently exhibit the cleavage above alluded to, and are the most exposed to the injuries produced by the infiltration of water between the planes of division. It is to be observed that the species of false stratification indicated by the cleavage is most apparent in the rocks which, like the slate rocks, have been affected by proximity to igneous formations, and that the more crystalline the marble the more exposed it is to this inconvenience. At the same time it must be observed that the more perfectly crystallized carbonates of lime, under which denomination, in fact, nearly all the finer marbles may be included, resist the chemical influences of the atmosphere more successfully than similar substances where the forms are not so distinctly marked. It would appear as though the process of crystallization were accompanied by the development of some chemical affinity between the ultimate particles, similar to that which is noticed with respect to the various forms of silica, and which enables them afterwards to resist more energetically external causes of decay. In some marbles the joints assume different directions from either the lines of stratigraphical deposition, or from the planes of cleavage; but in the practical operations of building the consideration of this peculiarity may be neglected, because they are usually so distinctly marked as to place in reality the natural limits to the sizes of the blocks raised.

M. Durocher communicated to the Académie des Sciences a memoir "Sur l'Absorption de l'Eau Atmosphérique par les Substances Minérales," which throws some light on the subject of the decomposition of silicated materials, or those containing metallic oxides. From his experiments it appears that all substances of this description actually absorb water from the atmosphere, and undergo a commencement of hydration, which must necessarily facilitate the decomposition of mixed minerals, such as the silicates, and is apparently the commencement of that action. Messrs. Jamin and Bertrand have also shown that in porous bodies gases are condensed with remarkable facility, so that it is possible that the conditions of molecular aggregation influence the durability of mineral substances in the direct proportion of the facilities which are offered to the passage of air to the interior. From this we may infer that the existence of a crystaline structure is in itself a protection to the materials in which it may occur, because, under such circumstances, the porosity is usually less; or at any rate the intervals between the ultimate molecules are proportionally smaller than in the case of materials held together simply by aggregation without crystallization. Sir H. De la Beche notices the universality of this law (Geol. Observer, ed. 1851, p. 8), but he does not attempt to account for it.

The magnesian, the oolitic, and the ordinary secondary and tertiary limestones, are liable to decay under the influence of the atmosphere, with very various degrees of rapidity; and it is moreover to be noted, that the same formations yield materials varying singularly in their powers of resistance according to the position they occupied in the quarries, and the exposure of the building in which they are employed. The results obtained by the use of the Anston magnesian limestone, and the marked differences to be observed in the Bath, Caen, and Portland oolites, as well as in the several members of the tertiary series of the Paris basin, appear to show that no *a priori* laws can be laid down with respect to their durability when exposed to the air. All these classes of materials are supposed to have been deposited by waters containing their elements in solution; and if they were once in that state (*i.e.* of solution) it must be evident that they are always susceptible of passing into it again, if the necessary conditions are presented, unless the deposition should have been effected by the introduction of some additional element, or such element should have been supplied at a later period. There is another chemical agent at work in many cases to hasten the decomposition of the sedimentary rocks unaffected by Plutonic action, namely, the animal matter which they so often contain; and as the distribution of this matter is not subject to any definite law, it necessarily produces irregular effects. Occasionally, also, the body of the stones is traversed by numerous fissures which have been subsequently filled in by more crystalline materials of greater powers of resistance; and again, the chemical nature of these stones often varies, owing to the presence of more or less silica in combination with the ordinary bases. Every possible variety in the mode of disintegration may therefore be observed in these stones.

Experience has shown that the magnesian limestones are not more capable of resisting the effects of our London atmosphere than the carbonates of lime formerly used, when proper care has been exercised in the selection of the latter. Mr. Rogers indeed remarks (Brit. Assoc. 1849), that rain-water slightly carbonated takes up the carbonate of magnesia more rapidly than it does the carbonate of lime, and that the magnesian silicates are easily soluble even in pure water. Forchhammer also observes, that water which contains carbonate of soda acts easily upon magnesian rocks. Now it is very probable that the rain-water falling through the atmosphere of London should be charged at any rate with carbonic acid gas, and thus become extremely prejudicial to this class of materials; and it is possible that the rain may give rise to a catalytic action between the lime and magnesia contained in this class of stones, which would facilitate their decomposition. Every stone, as may be gathered from what has been said above, is exposed to decay in the precise ratio of its porosity, but in addition to this cause of disintegration, which acts principally by allowing water to exercise its natural mechanical powers, all the ordinary building stones are exposed to the peculiar process known by the name of nitrification, which, in consequence of the formation of the crystals of nitre, combined with a base, tends to disintegration of the surface. The magnesian limestones allow the development of this process as freely as the carbonates of lime, even if they do not offer extraordinary facilities for its action. The generally received opinion is, that the azote, furnished by the decomposition of the animal matters diffused through the rocks, combines with the oxygen of the atmosphere to form nitrogen, which latter gas in its turn combines with the soda, existing in small quantities in all sedimentary deposits, to form the nitrate of soda, or the saltpetre of commerce. Dumas says that azote and oxygen combine most readily under the influence of electricity, but that the energetic bases, lime and magnesia, may suffice, especially when moisture is present, to replace that intermediate agent. At any rate this chemical operation takes place in nearly all building stones of a porous nature, and it may confirm the common opinion, that of stones, of the same description geologically, the densest are the most likely to resist the action of the atmosphere.

The phenomena of the saltpetring of building materials are very little understood; but there are certain practical rules which may serve to guide the architect in his endeavours to avoid the inconvenience arising from it. They are,—

First. To employ, if possible, in damp positions, either granite, the mill stone grits, the conglomerates of a purely silicious character, or sandstones free from animal matter, and the sulphate of iron.

Secondly. If the cost of either of these classes of materials should render their employment impracticable, the use of any of the ordinary limestones should be avoided in positions where they are exposed to warm dampness, should it be desired to execute any coloured decorations upon the immediate surface of the walls. When from local considerations it may be advisable to employ these materials in basements, or other damp positions, they must be separated from the upper structure by the interposition of a layer of some impermeable material, to intercept the passage of the water, which would otherwise be absorbed by the capillarity of the upper stonework.

Thirdly. Every precaution must be taken to prevent the saturation of the ordinary limestones by sea water, and the use of sea sand in the mortar to be employed with them must be carefully avoided, because sea water furnishes the salts of soda most likely to assist in the formation of the nitrates, and sea sand is also highly impregnated with the same salts. It is equally known that the atmosphere of the seashore holds in suspension a notable quantity of the various salts which pass off by evaporation from the surface of the sea; and it is for this reason that stones which are exposed to nitrification suffer more rapidly in such positions than in the interior of the country.

Fourthly. To isolate decorative works effectually from the walls formed of materials in any way susceptible of saltpetring. Of late years attempts have been made in Paris, and some other continental towns, to revive the practice of mural decorations, but the results have generally been unfavourable, in consequence of the chemical action of the atmospheric moisture transmitted through the pores of the stones. So seriously has this cause been observed to affect internal decorations, that the architect of the new Hôtel du Ministère des Affaires Etrangères, M. Lacornée, has lined the inner surfaces of the walls destined to receive either silk panels or paintings with sheet lead, and has then battened out independently of them. In the new church of St. Vincent de Paul the painting on the dome

behind the high altar has begun to fade from the effects of the transmission of the moisture of the atmosphere through the stone vaulting. This work has not been executed more than about twelve months.

It must be observed with respect both to the carbonates of lime and the magnesian limestones, that their principal elements exist only in the state of subcarbonates while the stones remain in the rock. They absorb carbonic acid from the atmosphere, and harden by exposure to the air; but as the hardening process would augment the cost of labour, and is moreover very slow in its action, it is rarely resorted to in practice. For many reasons, however, it would be desirable to quarry the stone required for an important building twelve months before it is to be employed, because the danger to be apprehended from frost would be avoided, and the carbonization would be more perfect. Another very useful precaution is to cover the exposed surfaces with a wash of some description, able either to close their pores or to produce a chemical action on the stones themselves. The practice of some London masons of painting the stonework, as it is carried up, with a thick slime of stone dust and water, acts in the former manner; the washing all exposed surfaces with an alkaline silicate acts in the latter, and it would be unquestionably preferable were it not that in some positions the addition of even the small quantity of soda requisite to hold the silica in solution might furnish the element of the saltpetre.*

INSTITUTE OF BRITISH ARCHITECTS.

AT the ordinary general meeting, held on Monday, the 12th June, Mr. F. C. Penrose in the chair, attention was called to Mr. Scott's report addressed to Sir William Molesworth on the state of the Royal Tombs in Westminster Abbey, and the measures proposed to be taken to arrest their decay. Mr. Papworth, fellow, gave a brief description of a bow and string rafter of a very light description used in Ireland. The paper read was "On Architecture as represented in Pictures," by H. Twining, Esq. and various engravings illustrative of the different schools of painting were exhibited. Mr. Richard Tress was elected as fellow. At the closing general meeting, held on the 26th of June, a paper "On the Topography and Antiquities of Constantinople," by the Rev. R. Burgess, was read.

CONVERSAZIONE AT THE ARCHITECTURAL MUSEUM.

THE *conversazione* at the Architectural Museum, in Canon-row, Westminster, on Thursday, the 29th ult. was very numerously attended, and passed off most satisfactorily. Earl de Grey presided with that frank cordiality which distinguishes him, and opened the business of the evening by calling on Mr. G. G. Scott, the treasurer, to read his report. Various votes of thanks, including an appeal for assistance, were moved and spoken to by the Bishop of Oxford, Canon Wordsworth, Lord Nelson, Dr. Biber, Mr. Clarke, Mr. Powell, Mr. Godwin, Sir William Ross, and others. The speeches of the Bishop and Dr. Biber were particularly interesting.

We repeat the expression of our hope that subscriptions will be forthcoming for the support and enlargement of the museum; and we print some portions of the treasurer's report to show the want of such an institution, and explain what has lately been done.

"Our objects can be best appreciated by reflecting on the low state to which all the arts subsidiary to architecture had been reduced, and how little had been done, till a very recent period, again to elevate them. I am not, of course, speaking of the higher branches of art, as sculpture and painting, viewed in their received, academical sense. These noble arts, so far from being in a low position, seem to have elevated themselves on so lofty a pinnacle as to look down with scorn upon her who once was called their sister, and to feel that it would be almost a degradation to work hand in hand with her whose glory it once was to unite in one perfect whole the efforts of the three sister arts. It is not, then, of sculpture and painting in their loftier phases that I am speaking, but rather of those humbler varieties of these glorious arts, which architecture must now be content to enlist as her handmaids. It is the raising of *these* from their low estate which is the great object of the founders of this Museum. The public have never, I think, been led sufficiently to reflect on the absurdity of the present position of architectural art, and particularly on the great gulf which now lies between the Academic and the architectural sculptor. At all times during which architecture has held a really elevated position, she has enlisted under her banner the first artists in whatever department which the period could boast; so much so, that it is often difficult in works of those periods to distinguish between the architect and the sculptor, and to know whether the architecture was the work of the one or the sculpture a portion of the perfect conception of the other.

It has been reserved for the present age, and perhaps for our own country, to realise the reverse of this, and to draw the greatest possible line of distinction between the sculptor of the academy and the architectural sculptor. The former ranks, as heretofore, among the highest and most honoured of his compatriots: his works command prices only to be paid by the most wealthy: he is reckoned (and justly) among the great worthies of his age, and is the guest of nobles and princes. The latter is too often removed, in social position, but one degree above the ordinary stonemason from whose ranks he has in many cases raised himself by his own unaided exertions: his remuneration is calculated at so many shillings a day: he is perhaps a member of a trades' union instead of a Royal Academy: he can afford neither the time nor the money necessary to the proper study of his art; and if, as is very often the case, he has been blessed by nature with really artistic sentiment and noble aspirations, his only incentive to ambition, and the great object which urges him to exertion and effort, is the hope that he may at as early a day as possible escape from a servitude which depresses his spirit, and divert his talents to objects, no matter what, so that they are not subsidiary to architecture.

To fill this cup of bitterness to the brim only one thing was needed, and that we have till lately possessed, a public of which ninety-nine-hundredths could not distinguish between the basest and the most beautiful architectural sculpture, and of which the other hundredth treated the whole art with scorn, because of the degradation from which they never lent a hand to help it.

The project on which we are now embarked is a humble effort to remedy, however slightly, this lamentable state of things.

It is vain to hope that sculptors of the highest class will again (at least, in our day) go hand in hand with architects: our object then must be to elevate the humbler class of sculptors and architectural carvers on which we have to depend. The first difficulty our art-workman has to contend with is that, being dependent for existence on his daily work, it is impossible for him to find means or spare time to visit and study the works of better periods of his art. *Our* first step, then, *is to bring these objects within his reach:* the next difficulty is that the study of nature, as the great storehouse of types for architectural decoration, has been till lately almost lost sight of, and our workmen are quite unfamiliar with the use of such types.

Our next object, then, is by means of casts and other accurate representations of the productions of nature, placed side by side with casts of the finest works in which such objects have been followed as a guide, at once to familiarise the mind of the workman with these primary types, and to place before him the best examples of the mode in which they may be made use of in art.

Our work is, however, not only with the *artist*, but with his *employer*: it would be a poor encouragement to the former if we were to cultivate his taste and improve his skill only to leave him, as now, without the natural reward of success or the incentives to emulation, and it would be doing little for architecture were we to do no more than so to elevate our artist-workmen as to lead them to quit our ranks and seek better remuneration in working for illustrated newspapers or modelling embossed book-covers. We must do more than this, or we shall have rendered our work but futile. *We must endeavour to raise the public taste*, and to cultivate such an appreciation of architectural art-labour as to induce the employer to set upon it a higher pecuniary value, and offer such a premium for its advancement as to render it a hopeful field for noble and generous aspiration."

"A deputation from our body, kindly headed by our noble president, has, during the last few months, been honoured with an interview with Prince Albert, who entered most kindly and at great length into the discussion of our plans. He expressed himself most strongly as to the absolute necessity of some radical change in the art-education of our workmen, of whose deficiencies he spoke in terms so true, and yet so painful, as to redouble our determination to do our part for the removal. His Royal Highness also took the opportunity of giving us some home truths as regards our own profession, which, however wholesome, I will not now repeat, lest they should stir up as violent a storm as followed the philippics of Pugin or of Ruskin. He expressed himself as most anxious that any efforts made for the improvement of art-workmen should be so far allied to those carried on under the Board of Trade as to insure their not losing efficiency by doing the same thing imperfectly twice over, which might be done better by united effort; and also expressed himself as most desirous that we should make such arrangements as to follow up in our particular department the educational movement so vigorously pressing onwards under Mr. Cole and Mr. Redgrave; and the interview closed by our being requested to confer on the subject with these gentlemen. By them we were most kindly and favourably received, and they have since attended one of our meetings to discuss the best mode by which their movement and our own might be made mutually to aid in carrying out the same great object."

Let it *not* be considered that it is a matter in which architects are alone interested: this is far from being the case. Personally it concerns *us* no more than others whether our buildings are or are not real works of art. We work not for ourselves, but for the *public;* and it is not as professional architects so much as lovers of art, that we appeal to that public to aid us in elevating the humbler instruments employed in carrying out *their* work. It is *they*, not *we*, who suffer through the artistic defects of our buildings: it is *their own* eyes which are, or ought to be, offended every day by the barbarous and uncouth carvings which too often disfigure them; and it is for *their* interest even more than our own, that such causes of offence should cease. I lay the more stress upon this because we almost always find that attempts at architectural beauty and artistic touches in our works are viewed by our employers as *indulgences* to the fancies of their architect, and as rather good-naturedly, or perhaps unwillingly *permitted* as a concession to his whims, than *demanded* as necessary to the perfection of the building, and as affording daily enjoyment to those for whose use it is erected.

I will add a few words merely to state my own experience of the utility of the museum. It is my custom, when employing a carver, to insist on his spending some time in studying here the objects which strike me as best calculated to furnish hints for his work. I can truly say that the advantage derived has been prodigious; so much so as to exhibit a perfect revolution in their work. I have been this very morning at a church in a provincial town where this has been exemplified in a most extraordinary degree, and where, from a few days' study in our museum, the carver has turned out work such as I hardly know a parallel to in the country. In another case an obscure carver sent to our museum by a builder in North Wales, has executed in the hard marble of Anglesea a series of capitals emulating the delicacy of those in the Sainte Chapelle at Paris, and has delighted himself in arranging, as his models, the wild plants from the neighbouring woods and hedges."

* To be continued.

THE WORKS OF NICKOLAS STONE, SENIOR.

THE WATER-GATE YORK-STAIRS.

In the last paragraph of your correspondent "A. W. H.'s" communication on the subject of the water-gate, York-stairs (p. 337), he writes, "Respecting the question of who designed the water-gate,' I will beg to suggest to your correspondent 'G. B.' that he would greatly aid in the solution of that problem were he to favour those of your readers who take an interest in such matters, with a full account of the other eminentt workes desined by the Master Mason Nickolas Stone.'"

I hasten, therefore, to follow the suggestion, and send you a copy of the list which I referred to in my note inserted in the *Builder*, p. 252, *ante*.

I may add that in the same book, which contains the accompanying list, are various memoranda relating to sums received by Stone during many years (from 1631 to 1642) for monuments, statues, fonts, chimney-pieces, pillars for sun-dials, &c.—some to a large amount; and amongst others—"1631. Dr. Done' (Dr. Donne), monument, 120*l.*; — Sir Dudley Diggs, a tappell and monument, 150*l.*; 1635. A statue of Jupiter, 28*l.*; 1636. Sir Julias Cæsar's monument, 110*l.*; 1638. Sir Edw[d] Coke, K[nt] Lord Chief Justice, monument, paid 400*l.*; 41. For a font of white marble and black marble wro[t] and sett in the new chappell in Lotthill Fields, in Westminster, 10*l.*;" also various chimney-pieces of 10*l.* 20*l.* 25*l.* and 30*l.* each. "G. B."

Some of y[e] most eminentt Workes that my Vncle Mr. Nickolas Stone, Senior, did in England, in Holland, and Scottland.

The Banqueting Roome att Whitehall.

The Chappell at St. James House, now standing.

The Staires and Water Gate at Sumerset House. Hee made y[e] figure Nilus and Mr. Harne y[e] other.

The fine Mozaicke Pavem[t] and Geometriall Glaires, and many other workes he did for y[e] Queene at Greenwiche House.

The fine Diall Stande, now ruiend in y[e] Prevy Garden at Whitehall. The famous Mr. Marr erected y[e] lines.

Many eminent Marble Chimney-peeces, noble Stone Gates and fronttises hee did for K. James y[e] 1st and King Charles y[e] 1st at Theobalds. Y[e] house is downe.

Hee did many stronge and good Stone Worke and Stone Carving[s] at Windsor Castle for y[e] King, y[e] K[n] allowing him 12[d] p. day for ever, a fee gift to him & and his heares, but sould to Sr. Marshall in Mr. John Stone's lifetime.

That noble Portico hee built at y[e] west end of St. Paules Churche. Mr. Inigo Jones his frinde and Mr. Stone's care in performing y[t] worke.

The Water Gate att Yorke House hee desined & built, & y[e] right hand Lion hee did, fronting the Thames. Mr. Kearne a Jarman, his brother in ma_ring * his sister, did y[e] Shee Lion.

The Gould smithes Hall in Foster Lane hee desined and built; it stands between 4 streetes, hath never a right angle, w[th] outside, and yett all the quare roomes w[th]in side, w[th] a noble entrance of y[e] Doricke order.

Hee desined & built at Holy Rude House for King James y[e] 1st in Scottland many curious workem[ts] and other workes w[th]inside y[e] K. house, which was well pade.

The curious Phisicke Garden hee desined & made y[e] entrances of stone att Oxford now to be seene.

The noble Fronttispeece w[th] twisted collums hee desind & built att St. Mary's Churche att Oxford.

In y[e] same yeare he desined Cornbury in Oxfordshere: he w[ntt] 33 journeyes, for w[ch] the Lord Cornbury gave him a 1,000*l.*—well pade.

Hee desined & built many curious workes for the Earl of Pembroke, at his hon[e] house att Wilton, near Salsbury—well paide.

Hee desined & built a fronttispece at Westerne Kirke, in Amsterdam, for his father-in-law, Mr. Hen. Kizer, master mason of y[t] citty; he carved y[e] 2 Lions at y[t] churche; by doeing y[m] Mr. De Kizer bestowed his daugheter on him, and partt of her portion was all y[t] Porttland stone y[t] built y[e] frontt of y[e] iner courtt of y[e] banqueting house at Whitehall, for Mr. De Kizer had a great partt of y[e] quarrey y[n] open in y[e] Ile of Porttland: this I know.

Hee did many more workes of eminence in many places, for he was maister mason of all y[e] King's houses and all y[e] Cinke portes: now there are 3 maister masons. He had 3 sonns—Hen. a fine painter; his 2[d] sonn Nickolas a curious sculpture; his youngest sonn was bred a scoller by Docttor busby: hee was an excelent architectt.

*Writ by Charles Stoakes. { * These words in the handwriting of G. Vertue.

MOVES IN LONDON.

Royal Academy of Music.—We are informed that this national institution, to which we are indebted for many English vocalists, including the names of Birch, Dolby, Seguin, Ransford, and various eminent instrumentalists of the day, are likely to erect an academy upon a site offered by John Laurie, Esq. of Hyde-park-place, a late sheriff of London, in a central position in Cavendish-square. The council, we are told, are determined to have a building "that will vie with any in the kingdom, and not be outdone by any in Europe, for the cultivation of a science which is making rapid strides in this country, and is refining the taste of the community." Mr. Mayhew, their architect, has made plans for the site in question. Some comments on the management of the Royal Academy of Music have reached us, but we must find some other opportunity to allude to these. That improvements and reforms are necessary seems clear.

A Temperance "Palace."—An arrangement is on foot amongst the friends of temperance, offended by the sale of wine, &c. at Sydenham, to purchase the Surrey Zoological Gardens, and to erect a large building of glass. We have not yet the precise particulars before us, but understand that it is proposed to raise 100,000*l.* by 100,000 1*l.* shares, and that the gardens have been provisionally purchased for 25,000*l.*

The Mansion House.—Our fair correspondent "Fan C." will be glad to learn that our energetic Lord Mayor not only admits that her complaint of the state of the air in the Egyptian Hall is well-founded, but obligingly states that he has himself directed the attention of the City Architect to the evil, so that we may anticipate a speedy improvement. There may be difficulties in the way, but we are quite certain that Mr. Bunning will have but to take the matter in hand and the thing will be done. We have received loud complaints, too, of the want of ventilation of the City Justice-room, in the same building. Perhaps something will, at the same time, be effected here.

MAKING CHURCHES COMFORTABLE.

I HOLD a pew in the middle aisle of a neat little district church, built, probably, within the last ten or fifteen years. In this church there are a great number of free sittings for the poor, and there are galleries in which sittings may be had at a moderate rate. But the free seats are only half occupied, and the galleries are nearly empty, except where occupied by schools; and my own very comfortably furnished pew is nearly forsaken by myself and family. The incumbent is a good preacher; and, better still, he is exemplary in his life, and labours hard among the poor.

What, then, is the reason that this church is seldom more than about half occupied? Most persons would at once say it must be owing to the ungodliness of the neighbourhood. But let us not be so rash in our judgments.

Here is clearly an important question. Permit me to tender my evidence. Permit me to state why my pew is not regularly occupied; as the same cause may be operating to prevent other pews and sittings, not only in this, but in other churches, from being occupied. As an individual, my case is of small importance, but as such cases are, it is to be feared, far too numerous, it appears to be worthy of serious attention.

The fault, it is submitted, is mainly owing to the architects of churches.

To attempt to warm this church with stoves was clearly an after-thought; and the whole arrangement of the doors and windows is such, that people are cut to pieces with draughts in all directions, sometimes blowing our hair and the leaves of our books one way and then the other. The cold, the wind, and the utter discomfort are such, that people are heard coughing and sneezing all over the church. As for myself, I seldom escape without a toothache, or a general cold, which, on many occasions, has rendered it necessary for me to be nursed at home for some days to get rid of the mischief done to my constitution on Sunday. In a word, I declare solemnly that I cannot go to church to take care of my soul, except at the risk of doing mortal damage to my body.

In the House of Commons, the temperature is ordered to be kept up to 62 degrees; at least, I think I saw it so stated in a blue book. At any rate, this is a most important temperature to be observed in the warming of our dwellings; for if a person will sit quite still, as in reading, without any exercise, in a room the temperature of which is below 62 degrees, he will certainly find the mucous membrane affected, particularly during the months from March to September. Attention to this fact would save many a life. It is good economy to have a thermometer marked plainly at 62 degrees, and to order servants to light fires when the temperature drops below this in our sitting-rooms, especially in summer. But in church, we often sit or stand motionless for two hours, in a temperature not, perhaps, more than 50 degrees even in summer. Or if it happens to be warm, then some door or window is thrown open, causing a cold current of air to sweep across the church. In either of these cases, a full tenth of the congregation get deadly damage.

Why should the house of God be less comfortable than our own homes? The poor man in his humble room likes to sit free from draughts, and likes to keep himself and family warm and comfortable; and however poor he may be, he will generally find something soft and warm to sit upon. But at church he must sit on a painted board, with his feet on stone and his hair blowing about in all directions. A church is usually a miserable place, even as compared to the home of a poor person. To gratify the taste with fine architecture will not compensate for the infliction of personal suffering. The only time when I can go without terror to the church to which I refer, is of a winter's evening, when it is lighted all over with gas, which diffuses general warmth, and prevents the currents of cold air rushing so violently towards the stoves.

But, as it is of little use to complain without suggesting remedies, I beg to state what I would do if I had to order the building of a church.

Though I am an enthusiast in architecture and works of art, my first duty would be to study the health of the people, remembering that the object of a church is not merely to ornament a street or a square, but to provide convenient and really comfortable accommodation for a mixed congregation of old and young, weak and healthy. First utility, and then ornaments.

To warm and ventilate has ever been a great difficulty, because the two seem incompatible. But, as regards churches, the difficulty is not so great; because the church is not, or at least ought not to be, occupied by the congregation more than two hours, and less than that would be better. To warm is the main question; to ventilate is easy.

The church should not be warmed by stoves inside the church, but by some apparatus that would diffuse warmth over the whole building, and of sufficient power to raise the temperature to 62 degrees; and this should be watched by the wardens, and not left to the church servants. The doors should be double, about 6 or 10 feet apart, with springs; so that when the inner door is open, the outer door shall be shut; thus keeping out a great rush of cold air,

* *Sic.*

upon the principle of lock-gates, keeping back the main body of the stream.

All the windows should be close; but the church should be lofty, so that the foul air that would accumulate during two hours should not be sufficient to be offensive, and from the roof I would have means of clearing off the bad air between the services.

By this means warmth would be secured, draughts prevented, and the ventilation would be sufficient. H.

PROVINCIAL NEWS.

High Roding.—The church of this place has been restored and re-opened. The general style of the building is perpendicular, except an east window, of the decorated style. The church is built in flint, with ridge tile on the chancel, slated nave, and bell gable. The south porch and the chancel are entirely restored. The architect was Mr. Pritchett, of Bishop's Stortford. There are forty additional sittings. The benches are of open stained oak, with carved poppy heads. The floor of nave and chancel is laid with encaustic tiles, red and straw coloured. The whole roof is open, with the original oak rafters, stained dark. There is a quatre-foil window, of coloured glass, above the larger west widow. A stone wall, with brick coping, has been put round the churchyard

Lincoln.—The statue, by Milnes, of the late Dr. Charlesworth, was to be placed on its pedestal last week.

Ipswich.—The following tenders were received for the erection of the depôt and hospital in Ipswich, for the East Suffolk Militia artillery:—

	Depôt.	Hospital.
Mr. Luff.....	£3,992 0 0	£606 0 0
Mr Gibbins	3,672 0 0	768 0 0
Mr. Simpson	3,620 17 1	605 1 4
Mr. Mason	3,440 0 0	680 0 0

The last tender has been accepted. The architect is Mr. R. M. Phipson, of Ipswich. The depôt will be of considerable strength, adapted not only for the security of guns and arms, but for the permanent quarters of a staff of thirty men. The main building, placed in the centre, will be loophooled and surrounded by a ditch. A drawbridge over this leads into the interior. During the past week, the workmen have dug the foundations, and commenced the erection of the principal outer wall, facing Anglesea-road.

Colchester.—The new church, dedicated to St. Mary Magdalen, was consecrated here last week by the Bishop of Rochester. The edifice is in the decorated style, in form of a cross, with nave, chancel, porch, and walls of Kentish rag stone, faced with flints, and dressings of Caen stone. It is lighted with numerous large and small windows, including one at the chancel over the communion of stained glass, on each side of which the ten commandments are engraved in stone. It has also some arches. The seats are open benches, and the timbers stained. There is a vestry for the preacher, and a gallery for children, in which an organ is shortly to be placed. There is an octagonal bell turret, 38 feet high, at the west-end. The edifice was designed by Mr. Barnes, architect, and executed at a cost of 2,625*l.* by Mr. Luff, of Ipswich, builder.

Newport (Isle of Wight).—The contract for the rebuilding of St. Thomas's Church, at Newport, according to the *Hampshire Advertiser*, has been taken by Mr. T. Dashwood, of Ryde, builder, whose tender was the lowest of four lodged, namely,—

Contractors.	Body of the Church.	Casing the Tower.	Total.
Dashwood, Ryde	£6,519	£1,810	£8,329
Bothell, Gosport	6,540	1,837	8,377
Myers, London	8,650	850	9,500
Pedley, Wilts	8,050	1,500	9,550

The casing of the tower, it is said, will not be contracted for till the funds allow of it. The contract for the whole work, it seems, on the plan of Mr. Daukes, was taken some years since, by Messrs. Myers, but as the committee were unable to proceed then from want of funds, the contractor, owing to the great advance in the price of labour and materials since, declined to fulfil his agreement under an advance of 35 per cent. The cash now in hand is 5,600*l.* and there are donations promised and subscriptions due, amounting to 1,200*l.* more. A vestry is to be called upon to consider the propriety of immediately proceeding with the work.

Winchester.—The new district church for the parishes of St. Maurice and St. Mary Kalendar will be consecrated by the bishop on 13th inst. There is still 250*l.* required to complete the permanent fund for carrying out future repairs, &c.

Stoke-upon-Trent.—The new congregational chapel about to be erected here is to be built from the designs of Messrs. Bidlake and Lovatt, of Wolverhampton. They were selected by the committee from a considerable number submitted in competition.

Dudley.—The shareholders of the new association for the erection of improved dwellings have resolved, that in accordance with the suggestion of the London directors, the erection of family dwellings in connection with the Metropolitan association should be first proceeded with, the erection of lodging-houses being for a time suspended.

Warwick.—A new church, dedicated in honour of All Saints, is about to be erected at Emscote, a suburb of Warwick. The edifice will cost 3,000*l.* exclusive of a site presented by the Earl of Warwick. The foundation-stone will be laid by the earl in the course of a few weeks.

Stratford-on-Avon.—The sum of 1,959*l.* 5s. 6d. has already been subscribed towards the building of the new church of St. James, at Stratford-on-Avon. The expense of the intended tower and spire will, however, render a considerably larger amount necessary.

The Okement.—The first stone of a new bridge across the river Okement, between Hatherleigh and Monk-okehampton, on a line of road being the nearest route from that locality to the North Devon Railway, has been laid. The thoroughfare at this part of the river, hitherto, has only been passable by a foot-bridge, or "clapper," and a ford through the water, both of which were dangerous, and led to many accidents. The bridge is to be built by voluntary contributions.

Devonport.—The joint tender of Mr. T. Greenwood, builder, and Mr. King, builder, both of Devonport, for the erection of a sea-wall at Drake's Island, has been accepted by the Board of Ordnance Operations have been commenced by the contractors, and the work is to be completed in six months from the date of the contract, which includes the erection of a main sea-wall, built of heavy stone, on the west side of the island, from about high-watermark; another wall, receding from the main wall several feet, to support the foundation of a battery there, and a third wall some distance in the rear of the second. The execution of the work was taken for 2,421*l.* There were three tenders, that of Mr. Clift being 2,479*l.* 10s.; that of Mr. Harvey, 2,542*l.* 18s.; the lowest being that of Messrs. Greenwood and King.

Swansea.—Mr. Rawlinson, at the request of the local Board of Health, has reported to them preliminarily on the subject of water supply and sewerage. The present supply of water being both defective and of hard quality, he recommends the bringing of a good supply of fine soft water from the Clydach, through about seven miles of earthenware pipes, at a cost of about 6,000*l.* or 10s. a lineal yard, and capable of conducting one and a half million gallons in twenty-four hours. The works for collecting the springs, &c. are estimated at 4,000*l.*; and the system of reservoirs, service-mains, and branches, &c. at Swansea, at about 15s. a-head, or 22,500*l.* for a population of 30,000: to this add for compensation, land, &c. 10,000*l.*; making in all 42,500*l.* for complete water supply, capable of increase, without loss, so as to serve half a million people. The board are recommended to appoint a surveyor to prepare accurate sections of the streets, &c. to enable the engineer to devise and lay down a proper system of sewers and drains, as well as with reference to the improvement of the present water supply; but in the meantime Mr. Rawlinson estimates that 25,000*l.* will most completely sewer and drain the borough. The local board, we may here add, last week resolved to advertise for a surveyor, with salary of 160*l.* They have also made other new arrangements as to inspector of nuisances, an office which has been very properly handed over to the police inspector; salary 10*l.* The medical officer of health's office they have resolved, with rather more questionable propriety, to abolish.

Holyhead.—It is intended by the Hon. W. O. Stanley to erect a new market in this town. It has been long wanted, and now more than ever. The site is to be the Summer Hill, at present used for gardens.

Birkenhead.—The chief corner-stone of a new college was to be laid here by the Marquis of Blandford, on the 3rd inst.

Liverpool.—Trinity Church, St. Anne-street, after having been thoroughly renovated both in the interior and exterior, will be re-opened, according to the local *Journal*, to-morrow. The building, which had been reduced to a sad state of dilapidation, has been almost entirely reconstructed. The old roof and parapets of both church and chancel have been removed, and a new one formed, upon a different principle, with a new gable. The stonework throughout the exterior has all been pointed and repaired. The ceiling is also quite new, and three ornamental mouldings have been introduced down the centre. All the windows are also new, and of modern character. Ground glass has been selected for the windows. The pews, which have been re upholstered in green baize, and the church throughout, have been painted in oak. The chancel has also been re-painted and decorated. Stained glass has been placed around the margin of the communion window. The repairs have been made by the corporation, at a cost of upwards of 2,000*l.* The contractors were Messrs. Thomas Haigh and Co. of Liverpool, and the works have been superintended by Mr. Isaac Dixon, who has acted in the capacity of clerk of works to the corporation.

Harpurhey.—On Saturday before last the foundation-stone of a new congregational chapel at Harpurhey, to be called Union Chapel, was laid. The site is opposite Queen's-park. The cost is between 2,000*l.* and 3,000*l.* towards which about 1,200*l.* have already been promised.

Stockport.—For the formation of the Edgeley main sewer, eight tenders were submitted, the amounts not including the cost of the tubular pipes of which the sewer is to be constructed and which had been purchased by the surveyor in order to prevent delay:—Messrs. Job Ralphs, of Stockport, 495*l.*; Joseph Henshall Edgeley, 675*l.*; Edwd. Bann, Stockport, 673*l.* John Oldham, Edgeley, 860*l.* 4s. 9d.; Job Ollerenshaw and Wilson Hudson, 530*l.*; George Braithwaite, of Strangeways, 414*l.*; James Bertram, Romiley, 521*l.* 15s. 6d.; and William Knight, of Strangeways, 454*l.* 18s. The contest lay between Mr. Bertram and Mr. Knight when it was finally decided in favour of the latter.

Thwaites.—The consecration of the new church here took place on Friday week. The style is Gothic, of the thirteenth century. The building consists of nave 62 feet long by 25 feet broad, and 50 feet high to ridge of roof, divided from south aisle of nearly same length and feet wide by five moulded stone arches, supported on cylindrical piers, with moulded capitals and bases. The chancel, 30 feet long by 18 feet wide, and 40 feet high to ridge of roof opens eastward from nave by a lofty ornamental arch. There is a vestry on the north aisle of chancel and a south porch. The masonry work was executed by Mr. Harrison, and the woodwork by Mr. C. Blades, both of Lancaster. The architect under whose superintendence it has been erected is Mr. E. G. Paley, of Lancaster. The cost is about 1,500*l.* which has been raised by public subscription. Of two sites generously offered, one by Mr. Laithwaite and the other by Mr. Postlethwaite, the latter was accepted on account of its close proximity to the old burial ground.

Ambleside.—The new church at Ambleside Westmorcland, was consecrated on 14th ult and the ground surrounding it as a cemetery. The church contains sittings for nearly 1,000 and is intended to be substituted for the old church, under the powers of the Act of Parliament of 8 and 9 Vict. cap. 70. The old church contains accommodation for about 500 persons only, and was incapable of enlargement: it

urchyard also is full, and did not admit of tension.

Howden.—The old parish church here was pened on Sunday week, after having had a new f "of the first pointed style of architecture" t on, according to a local newspaper authority. is work was contracted for by Mr. Robert gden, of Howden. The woodwork has been ecuted by Mr. S. Richardstone, of Armin, ir Goole. Messrs. Weightman, Hadfield, l Goldie, of Sheffield, were the architects.

Sheffield.—The foundation-stone of St. Luke's urch, Hollis Croft district, was laid on ursday week. The site is an elevated piece land at the junction of Garden-street with lly-street. The edifice will be built under superintendence of Mr. Mitchell, architect, the Decorative style of architecture; and at north-west corner there will be a tower and re of the height of 130 feet. The interior is ided into nave, internal chancel, and aisles, l will accommodate about 800 persons. Two- rds of the seats will be free. The edifice, en completed, it is estimated, will cost about 000*l.*; but as the amount in hand is only out 2,300*l.* the contracts do not include the erior fittings, or erection of tower and spire. e contractors are Mr. W. Reynolds, mason; . A. Hayball, carpenter; Messrs. Law and nite, slaters; and Mr. B. Seale, plumber.——

St. Philip's Church, a window to the memory a late organist has just been placed, by sub- iption, on the south side. It is divided into r lights, and consists of seven figures, the principal of which are, David with the p, and Miriam with the timbrel. Each light divided into three compartments, by means an ornamental shaft, supporting a canopy ending itself over the head of each figure: ve these, and in the top of the window, is a otional figure bearing a scroll, on which is cribed, "Praise ye the Lord." The figures l canopy are all set in diapered back-grounds. e subscriptions received fall short of the pense of putting in the window, which has en executed by Mr. Crooks, of Sheffield.——

Thursday week, Mr. H. S. Cole met the ncil of the local School of Design, at their uest, to hear an explanation of their views as some recent minutes of the Science and Art partment of the Board of Trade affecting the ure position of the school in the event of a nge of master. It was arranged that the vernment would never require more than f the fees of the students to be devoted to salary of the masters, leaving the rest at the posal of the council for the working of the ool; the Government also undertaking to vide efficient and able teachers, and leaving whole management of the school in the ds of the local council.

THE LATE MR. WILLIAM LAXTON.

WE have already mentioned briefly the death Mr. Laxton on the 31st of May last: let us t a few particulars. Mr. Laxton was born the 30th March, 1802, and received his edu- ion at Christ's Hospital. His father was a rveyor, and he was brought up to the same rsuit. In his youth he was an active member the "City Philosophical Society," who held ir meetings at a time when such associations re rare, at the house of Mr. Tatham, in rset-street, Dorset-square.

At an early period Mr. Laxton took a part in ilways. He surveyed and laid down several es at various periods, but did not obtain construction of any line. Among other dertakings, he was connected with the Hull l Selby, City and Richmond, Surrey Grand nction, Hull, Lincoln, and Nottingham, avesend and Brighton, Lynn, Wisbeach, and y, and Thames Embankment Railways. He o designed a viaduct to overcome the diffi- ties of Holborn Hill. In connection with draulic engineering he designed and laid out e water-works at Falmouth and Stonehouse, l designed works for Penzance and Brighton. e was connected with Mr. Robert Stephenson, .P. in the promotion of the Watford Water mpany for supplying London with water from e chalk formation.

In 1837, at which time the only architectural riodical was the *Architectural Magazine*, edited by the late Mr. J. C. Loudon, Mr. Laxton established the *Civil Engineers' Journal*, and edited it till very recently. A few years ago he purchased a weekly publication called *The Architect*, which had been issued in ungenerous imitation of the *Builder*, and had failed. After carrying this on for a short time he united it with his journal. The "Price Book," which bears his name, was originated by his father. In connection with his brother, Mr. Henry Laxton, he issued this, with such additions and corrections as were from time to time necessary, for thirty years. Amongst other appointments, Mr. Laxton was intrusted with the surveyorship to the Baron de Goldsmid's estate at Brighton, and was surveyor to the Farmer's Fire and Life Insurance Company.

He has left an only son, Mr. F. W. Laxton, barrister-at-law.

OPENING OF NEW ROOMS FOR SHERBORNE LITERARY INSTITUTION.

THE Sherborne Literary Society opened a new building in connection with their institution on Monday in last week. The new premises, including a lecture-room, capable of accommodating from 250 to 300 persons, a reading-room, class-rooms, house for the secretary, and other offices, are conveniently situated in Newland. The premises are warmed with hot-water pipes, are spacious and lofty, and are faced by a gravel carriage-way up to the door. The new rooms were decorated with evergreens for the occasion.

Mr. Robert Gordon, of Leweston, the president of the year, who is succeeded by Sir Wm. Medlycott, presided, and delivered a lively and humorous speech, in course of which, alluding to the suitability of such studies as those to be promoted by this society, amongst the sons of labour, he remarked that labour was deified amongst the heathen by Vulcan: it was found necessary to give him a wife, and whom did they select for him? Not a goddess connected with labour, but they married him to the Queen of Beauty. Labour was wedded to beauty. This led to a little wholesome advice to the ladies, although he wished to be

> "To their faults a little blind,
> And to their virtues ever kind."

Mr. Macready, at the close of the chairman's speech, addressed the meeting, entering pretty fully into detail as to the history and prospects of the institution, with which he identified himself; and then remarked that, strange as it might appear, while the utility and ameliorating influences of these institutions are acknowledged through the length and breadth of the kingdom —while there are upwards of a thousand of them in direct intercourse with the Society of Arts— whilst the flower of our aristocracy not only acknowledge their advantages, but are enrolled as patrons of them, and not unfrequently are found the advocates of, and zealous labourers in, them—while it may emphatically be said—

> "The Prince of all the land leads them on"—

while all this is going on around us, certain discerning individuals in our small and, in London phraseology, remote town, have made the discovery that our undertaking is based on a levelling system, and some of our opponents say it is upon *principle* they object to our association In this institution all, he admitted, did meet on an independent footing, as in a commonwealth, where self-imposed laws secure order, and a desire of rendering benefit on the one hand, and a due appreciation of it on the other, insure the respect of all, raising the individual in self-esteem, and exalting him in the opinion of his fellow-man. In this respect he found his own sentiments strengthened by those of a leading philosopher, Sir John Herschel,— "Nothing unites people," he said, "like intellectual enjoyment; it does more, it gives them mutual respect, and to each among them self-respect—that corner-stone of all virtue." Is it to these principles, as the foundation of a "levelling system," that exceptions are taken? He would request indulgence a little longer, whilst recounting an anecdote not altogether inapplicable to the defence he had attempted to set up. The first time he visited Canterbury he wished, of course, to see the cathedral. A gentleman there of the name of Austin, the surveyor and architect of the building, hearing of his intention, and being desirous of showing him civility, proposed to accompany him. This person had redecorated almost the whole of the interior, had restored the dilapidated portion of the western front, had built himself an excellent house in the cathedral grounds, and was, at the time he spoke of, in the enjoyment of a very comfortable income, and a most respectable position. He was the artificer of his own fortune, and had raised himself to this position from a state almost of actual destitution: he had formerly been the servant of a friend of his, and when he reached Canterbury had not half-a-crown in his pocket! In lifting himself to a level so far above his original condition, he might possibly shock the prejudices of the anti-levelling exclusionists! But this was not the story. Mr. Austin had directed his attention to everything worthy of notice; pointed out with the detective eye of taste the more recondite excellences of art throughout the building, and, with convincing accuracy, shed light on the historical traditions associated with it. It was opposite the western front that he stood with him before what seemed the site of a small shed or stall, then unoccupied, and said "Upon this spot a little barber's shop used to stand, The last time Lord Tenterden came down here, he brought his son with him, and it was my duty, of course, to attend them over the cathedral. When we came to this side of it, he led his son up to this very spot, and said to him, 'Charles, you see this little shop: I have brought you here on purpose to show it to you: in that shop your grandfather used to shave for a penny! That is the proudest reflection of my life! While you live, never forget that, my dear Charles!'" And this man, the son of a poor barber, was the Lord Chief Justice of England! What will "the levelling system" dissentients say to that? They may argue, perhaps, that it is an exception to the general rule. But, for that very reason, because the chances of great success are rare, we should surely spare no pains in improving the condition of all whom accident may depress, or fortune may not befriend. He exulted in the reflection, that through institutions like these, they will still at least possess the means of enlightenment and intellectual recreation:—

> "Not doomed to ignorance, though forced to tread
> From childhood up the ways of poverty,
> From unreflecting ignorance redeemed,
> And from amusement rescued."

The meeting was afterwards addressed by various other gentlemen, among whom were several clergymen, and appropriate resolutions in support of the objects of the institution were passed.

LIMITED LIABILITY IN PARTNERSHIPS.

HAVING long advocated the introduction of the principle of restricted responsibility in trade partnerships, it naturally gives us much satisfaction to find that this, like so many others of the desiderata advocated in our columns, seems to be in a fair way of being carried into effect.

An interesting and animated discussion on the subject took place last week in the House of Commons, on a resolution moved by Mr. Collier, to the effect "that the law of partnership, which renders every person who, though not an ostensible partner, shares the profits of a trading concern, liable to the whole amount of its debts, is unsatisfactory, and should be so far modified as to permit persons to contribute to the capital of such concerns, on terms of sharing their profits, without incurring liability beyond a limited amount." For several centuries, he remarked, the principle of partnership *en commandite* had been established in Italy. It was adopted in Genoa and Venice. It spread in France, and was adopted in Holland. It was owing to that law that the Dutch had executed many of their greatest works. It extended to Germany and Russia, and was finally adopted in America. These facts showed beyond doubt the beneficial working of such a law. It was alleged that it was in consequence of the law of *un*limited liability that the country had arrived at its present state of prosperity. He denied

this. He asserted, on the contrary, that they were indebted to the breaches of this law for the great works that had been carried out. Where would have been their railways, their canals, their docks, and their many other great works, but for the violations of this law? Even their greatest work of art in modern days, the Crystal Palace, would never have been erected if they had confined themselves to the letter of the law. The great effects he anticipated from a change in the law were the cheapening of capital, and the rendering it easy for small capitalists to become larger capitalists. And whilst it did this it would injure none; or if by possibility it injured any, it would only be the great capitalists, whose interest in this question was, in fact, the interest of monopolists. He had great faith in the operation of the principle of unrestricted competition. It was impossible to calculate the extent to which that principle was capable of being developed. He looked to it as bringing together capital and labour—the employer and the employed—and making the labourer better attached to the classes above him, and to the institutions of the country; and on these grounds he believed the change would be socially, politically, and economically beneficial.

After lengthened remarks by Viscount Goderich, Messrs. Cardwell, Lucas, Cobden, Glyn, and Malins, in which other members also took part, including Lord Palmerston, Mr. Ricardo, and the Attorney-General, the question was put, and carried amid loud cheers, no one venturing to divide against it.

In conclusion, we would wish the working classes to note that there can be no doubt the chief object which Parliament has in view in coming to so hopeful a conclusion is the promotion of *their* interests,—the interests of the working classes throughout the country.

SCIENCE AND ART IN PARLIAMENT.

On the sum of 55,225*l.* being proposed to be voted to defray the expenses of the establishment of the British Museum,

Mr. Pellatt complained of the number of days for the admission of the public to the British Museum being restricted to three a week.

Mr. J. G. Phillimore suggested that steps should be taken to print some of the valuable manuscripts in the possession of the Museum—the works of Wycliffe, for instance, which he was sorry to say, to the disgrace of this country, had never yet been printed.

Mr. W. J. Fox suggested that there should be a reading-room established, accessible in the evening. He had often heard young men express their regret that there was no such advantage open to them, and he knew that they would be willing to contribute towards any expense which it might cause.

Mr. Wilson said the subject of opening the Museum more frequently was at the present moment engaging the most earnest attention of the trustees.

Lord Seymour said the question of opening the library in the evening had been frequently mooted, but the library of the British Museum was different from a common reading library, and its real value was in being adapted for the use of persons who were engaged in the compilation of literary works. For such a purpose the library of the British Museum afforded more facilities than any other library in Europe. When the new reading-room came into full operation, further means might possibly be found for extending the accommodation afforded by the library. He thought it would be of great value if all European nations would combine in forming one universal catalogue, which would show all the various books printed in Europe up to a certain date.

Mr. Ewart thought that in a vast metropolis like London there should be more than one public library. A committee recommended last year that the metropolis should be divided into six municipalities, with a corporation to each, and, if this were done, it would be highly advisable to have a public library in connection with each.

Upon the vote of 101,142*l.* for new buildings,

Mr. Heywood said, there was an item of 61,000*l.*, "for the erection of a building within the interior quadrangle of the Museum, for the purpose of affording increased accommodation." He wished to know what kind of building it was for which so large a sum was required. If it was merely for the glass roof of the quadrangle, he thought the sum was a great deal too much.

Lord Seymour said, the expense of forming the new reading-room was undoubtedly considerable, but at present it was absolutely impossible to find room for the collection of books which found their way into the Museum. The new building would afford accommodation for many years to come, and, in addition, it would form a good reading-room for the use of double the number of readers who at present attended the library.

On the vote of 7,490*l.* for the National Gallery,

Lord W. Graham wished to know whether the rumour was well founded that it was in contemplation to appoint a salaried director, and to select an eminent German professor for the appointment?

Mr. Wilson said that the subject was under the consideration of the First Lord of the Treasury. He believed that it was the intention of the Government to appoint a salaried director very shortly, but there was no truth in the rumour that a German professor was to be selected.

Mr. H. D. Seymour saw that it was proposed to vote 27,000*l.* in the present estimates for a new National Gallery at Kensington-gore. Now, the Government had never said that they had fixed upon Kensington-gore as the site for a National Gallery, and from the form of this vote there were no means of judging what they intended to build there. Common sense suggested that the Royal Academy should be required to remove from Trafalgar-square, and that the apartments vacated by them should be given up to the Vernon Gallery. The Government had given 140,000*l.* for Burlington-house, and if it were right for the public to give rooms and accommodation to the Royal Academy, they might be located there.

Mr. Wilson said that the item of 27,000*l.* was merely a continuation of the vote of last year for the purchase of land at Kensington-gore. The Vernon Gallery had been left, on condition that it should be kept as a separate collection by itself, and her Majesty had given Marlborough-house for the temporary exhibition of the pictures there. At present there were no means of taking them elsewhere, and the public were, he believed, satisfied with their present place of exhibition.

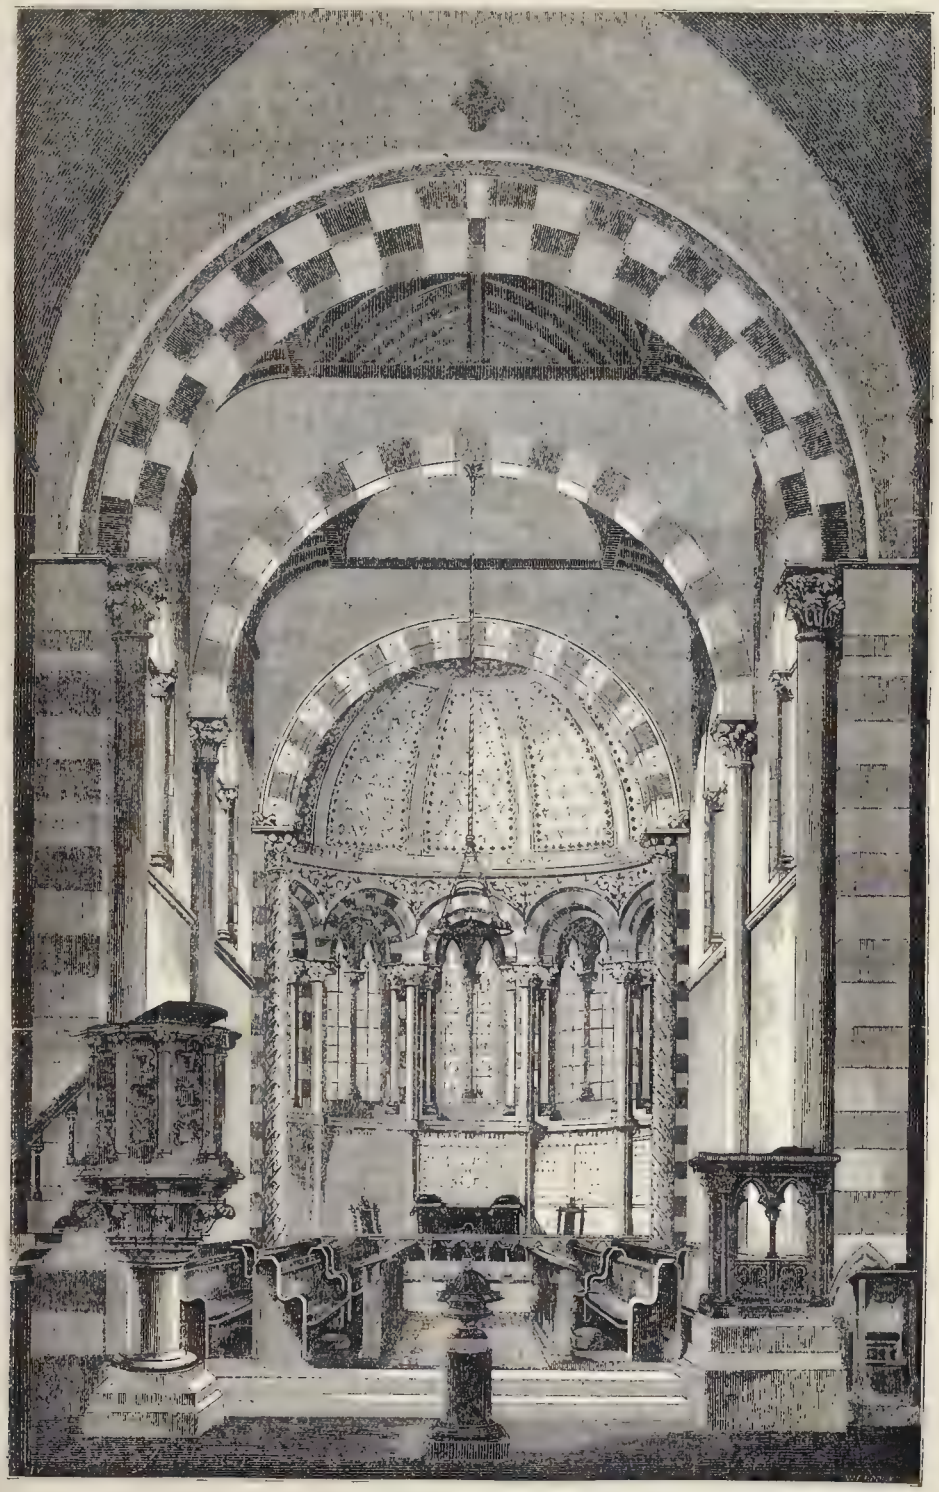
THE CHILDREN OF THE POOR.

The Nursery in Portugal-street.—Your kind notice, on the 24th June, of the Infant Nursery in Portugal-street, encourages me to offer the following remarks.

From its commencement in March, 1853, the number of infants received daily has gradually increased, and the applications for admission have been, for the most part, made at the recommendation of those who have benefited by the institution. This is, perhaps, the most satisfactory evidence that the institution is duly appreciated by the industrious poor.

Those who frequent the nursery observe a very marked improvement in the health and disposition of the children who have been in any degree regular in their attendance; whilst those who have the superintendence are encouraged by an unmixed expression of gratitude on the part of the parents. The poor widow, before utterly destitute and incapable of helping herself, is thankful that she can now, without her family being neglected, earn a subsistence for herself and children. Many a poor mother, too, who has been, from the birth of her first infant, entirely dependent on the scanty earnings of her husband for the support of herself and offspring, is now enabled to contribute nearly, and in some instances quite, an equal share. I need not say that the condition of such a family is much improved: but I will record the observation of a poor woman who was declaring her thankfulness some few days since. She said, with tears in her eyes, "And, sir, my husband is so much kinder to me now than he used to be." She spoke volumes, and gave me a subject for deep reflection. Her husband is, I believe, a steady man, but a labourer, and then earning only 12*s.* per week.

There are considerations of a more general character. Who can say what may be the effect on the public weal of rightly training the minds of a number of children from their earliest infancy? Who can estimate the benefit of leading the poor to think that the interests of themselves and their children are really cared for by the rich? From a practical knowledge of the poor I am convinced that nothing will more tend to a reduction of our parochial burdens, and to an improvement in the religious and moral character of the poor than the bringing of rich and poor more immediately in contact, and teaching the latter to respect themselves as beings intended to occupy an important position in this world, and a glorious equality in the next; and I know of no better means by which this can be accomplished than by an endeavour on the part of the rich to gain the respect and love of the poor by acts of kindness to their infant offspring. Infant nurseries are, in my opinion, the first step towards the accomplishment of an object in which all classes of society are, of necessity, greatly interested.



JOHN OLIVER,
Chaplain of King's College Hospital.

Bethnal-green.—Amongst those who are quietly labouring in a great field, we are impelled to mention a working man, E. Harris, who, feeling the want of instruction in the neighbourhood of Bethnal-green, took a room in March, 1851, and with his three daughters as teachers, commenced a Sunday school with nine children. In six months they numbered forty, and a twelvemonth ago, when we first found him out, there were ninety on the books. They have now on the Sunday afternoons from 100 to 120 children; and we have reason to believe, from personal inquiry, that he is effecting much good with very small means and trifling aid. To overcome the influence of bad example during the previous week is the great difficulty. The evils of intemperance is his great theme. Knowing, as we have before said, that there are some thousands of children in this vast metropolis who "are being educated in vice, fitted for disturbing and injuring society, forbidden from good," and who may if we please, and will take the right steps, be made decent members of society,—that there are thousands who will be either good citizens or a pestilence, according as they are trained,—we cannot too highly praise such efforts as these on the part of one who might easily have persuaded himself that to do good was a luxury not in his power.

CHANCEL OF CAMDEN CHURCH, CAMBERWELL.

CAMDEN CHURCH, Camberwell, is one of those nondescript structures of which the type was cast half a century or more ago, and stereotyped for conventicles of all kinds. To tack on to such a structure a Byzantine chancel reminds one forcibly of Horace's fish-tail and the "*mulier formosa superne.*" Still it has been done by the exertions of the Rev. D. Moore, the incumbent, and others, and not unsuccessfully. By raising the flat roof of the old part and carrying a waggon-head the whole length of the building coincident with the chancel-arch, offending incongruity has been avoided. Our engraving represents the new chancel. The architect was Mr. Scott; the builder Mr. Myers. The cost was about 2,000*l.* exclusive of the adaptation of the roof, which, with other alterations, amounted to 800*l.* more. The stained glass window is by Ward, in Frith-street, assisted by hints from Mr. Ruskin (a member of the congregation), and is a present from the church-warden. Other stained windows are to follow in the apse. The carving is nearly all by Phillips. The decoration (from designs by the architect), are by Castell, in South Molton-street.

SURVEYORSHIP OF WALSALL.—Mr. James Clark, of Exeter, builder, has been appointed town surveyor of the borough of Walsall by the local improvement commissioners. There were thirty-four applicants for the situation.

THE CHANCEL OF CAMDEN CHURCH, CAMBERWELL.—Mr. G. G. Scott, Architect.

THE WELLINGTON CLOCK TOWER, SOUTHWARK.

Sir: By your criticism and protest you prevented the commissioners disgracing themselves by the erection of an imitation of a *stone* clock tower in cast-iron. Pray raise your voice again, if it be not too late, and solicit them to pause before they complete the monstrous obstruction to traffic which they have commenced in its stead. True, it is a stone building *in stone*, but it is twice as large as it ought to be,—a coarse hindrance to circulation, which, if finished, will be pulled down by subscription before a dozen years have passed away. It ought to have been an iron construction, designed in conformity with the material, and open at the bottom to afford refuge to crossing passengers. I do not hesitate to say, from intimate knowledge of the spot, that if the building which has been commenced be finished, it will be an enormous nuisance.

A Warning Voice.

FALL OF HOUSES, SAFFRON-HILL.

As the workmen were engaged on Tuesday last in pulling down some old houses in Great Saffron-hill, which were required to be cleared away for the formation of the new Victoria-street, from Blackfriars to Clerkenwell-green, shortly after eleven o'clock in the forenoon, two of them, viz. Nos. 24 and 25, Great Saffron-hill, suddenly fell with a crash into the cellars, and we regret to add five of the workmen sank with the ruins. Four of them were speedily rescued from their perilous positions, but it was about an hour before the fifth was taken out of the rubbish. All were forthwith sent to St. Bartholomew's Hospital; two, however, who were only slightly injured, left shortly for their own homes; the remaining three are unfortunately seriously hurt. The houses, which belonged to a row of five all in course of demolition, had been shored up on the inside, and every precaution, it is stated, that a long experience of pulling down the houses in the neighbourhood could suggest, was taken by the men in the service of Messrs. Pullen and Sons, the auctioneers by whom the property had been sold; but owing to the decayed state of the materials of which the buildings were composed, these precautions did not avail to prevent the accident. The houses literally tumbled to pieces, the bricks separating one from the other quite clean, the mortar crumbling to dust, and the joists, particularly where tenoned into the girders, were found to be quite decayed.

Extreme caution should be used in the removal of buildings of this class, but it is impossible to persuade the men working at it (and who are in most cases themselves the purchasers of the materials) that even the precautions taken are necessary, so reckless do they, from habit, become.

THE ARCILEOLOGICAL INSTITUTE.

The congress at Cambridge has been opened satisfactorily. Prince Albert, as Chancellor of the University, was present on Wednesday, when Dr. Guest, of Caius, read a learned paper on the Brent Ditches, and Professor Willis illustrated the Colleges. Professor Sedgewick made a pleasant speech. We shall give some account of their doings next week.

GREEN STAINS ON STONE.

A correspondent having made some inquiries concerning the green fungi on stone copings, Mr. C. H. Smith writes us as follows:—With regard to the green vegetation on the surface of new stonework, I am not prepared to recommend any mode of procedure that will certainly prevent it. Salts of various kinds, particularly that of urine, are all extremely favourable to this kind of vegetating green stain; and I think solutions of lime retard its growth. I have often observed on the surface of buildings, recently erected, with bath or other soft stone, that where the "*fine stuff*," or mortar, used in the beds and joints, has accidentally flowed over, while bedding or fixing the stones, so as to run down the upright surface of the ashlar, wherever the stone has been under the influence of the lime, not the slightest trace of green can be observed; whereas, in many places, a very distinct line of demarcation may be seen of a bright green tint, where the surface of the stone has not been overflowed or influenced by the lime.

Might not some plan be adopted to wash or smear over the stone, in parts where it is likely to become green, with thin lime-white or fluid mortar, immediately the stones are fixed in the building, the wash or smearing to be removed when the building is completed, at the time when the masons are doing what is usual to all buildings, that is "*cleaning down*" just before the scaffolding is removed.

HOLBEACH CEMETERY COMPETITION.

In reply to the first advertisment, it appears that forty-two sets of plans were sent in,—Mr. Drury, of Lincoln, receiving the first premium; Mr. Bellamy, of Lincoln, the second ditto; and Mr. Pennington, of London, the third ditto. Upon the second advertisement appearing in these columns, it seems that twenty-five sets of plans were sent in, and five arrived after the stipulated time. The designs of Messrs. Prickett and Sons, of York, were selected for execution; Mr. Browning, of Stamford, was awarded the second premium; and Mr. Wm. Rickwood, London, the third premium. The works will be commenced immediately.

OXFORD ARCHITECTURAL SOCIETY.

GILGAL.

At a recent meeting, Mr. Parker read a paper on the connection between Stonehenge and Gilgal. The Hebrew word Gilgal signifies literally a circular stone, but in the opinion of good Hebrew scholars may very well signify a circle of stones.* The Gilgal was a place for the assembling of the people, not only for the purpose of religious worship, but also for other purposes, such as great courts of justice—for Samuel judged Israel in Gilgal, and went in circuit to Bethel, and Gilgal, and Mizpah: all of these were similar places, situated on high hills, and frequently called merely high places, and stone pillars or altars were set up in them. The Druidical circles are found in similar situations, adapted for the same purposes, and have stone pillars set up in them, which have continued to be objects of worship in some districts, especially Brittany, almost to the present day. The custom of assembling the people in these places on stated occasions was also continued to a late period, as in Scotland, mentioned by Mr. Logan. Crookem Tor, alias Parliament Arch, on Dartmoor, has been used from time immemorial as a court of justice until quite recently, and seats are cut in the rock of the Tor for the judge and the jury. At Pue Tor, near the village of Sampford Spinney, is a large square apartment hewn out of a rock, which seems to have been used for a similar purpose. Mr. Parker concluded by expressing a hope that some more competent person would take up this interesting subject, and investigate it thoroughly; he had merely thrown together a few hints to call attention to it.

* See "History in Ruins," p. 5.

GALVANIC RAILWAY SIGNALS.

By some of your late issues, I perceive that several plans for the prevention of accidents on railways have been lately attracting considerable public attention, and as it is of vital importance to all that some efficient plan should be contrived and generally adopted, for the prevention of the many disastrous and fatal accidents which are continually occurring, even on the best regulated lines, I take the liberty of directing your attention to a plan which I made public about two years ago.

The plan I proposed is as follows:—At certain points along the line, erect two posts (with a projecting arm to each), forty or fifty yards apart, and close to the outside rail. Between these arms extend a pretty thick wire, passing through insulators, and having one end connected with the earth. The wire should not be stretched tight, but allowed to droop slightly. The wire may be carried to any distance beyond the post, and before it enters the earth should be connected with an electro-magnet, and the requisite mechanical means for ringing a bell. Then let each engine have an insulated metallic rod projecting from the side of it, at such a height as to touch and slightly raise the drooping wire: this rod is to be connected with one end of a battery, carried by the engines, having the other end connected with one of the axles of the engine. By this simple and inexpensive means, whenever the engine approached the part of the line provided with this arrangement, the projecting rod on the engine would, by coming in contact with the drooping wire extended between the posts, complete the electric circuit, bring the magnet into action, and set the bell ringing for any length of time requisite, and at any distance in advance of the train. This arrangement might be applied to the whole line, or only to tunnels and abrupt turnings, or curves, where the engine or its light can only be seen for a short distance, and at the approaches to stations and crossings.

The bells in this single arrangement would give warning of the approach of a train, but would not tell in what direction it was proceeding; but if the same contrivance is carried out on another set of arms projecting from the same posts—in the manner already described, but about a foot lower,—and with another metallic rod projecting from the opposite side of the engine to that of the other rod, at such a height as to come in contact with the wire extended between the lower set of arms, and having a different toned bell, you could readily tell by the sound of the bells the direction in which the approaching engine was proceeding. Where a double line of rails is laid, this double arrangement should be applied to both lines (in which case four different toned bells should be used), when the engine-man would at once know—either by day or night, or in a fog—by the tone of the bell, whether the advancing engine was on his line of rails, and, if so, whether it was meeting, overtaking him, or he overtaking it. This plan would, I am certain, be found simple, cheap, efficient, and not liable to get out of order, and would make the most dangerous parts of the line, as now circumstanced, as safe as any other. The *Builder* lately noticed an "Electric Railway Signal," recently patented by Mr. Tyer, which in many respects is similar to that I have proposed, but which *promises* more. He says that, by his system, "the train itself, upon entering a station, will give notice to the station it has left that the line is so far clear,"—that is, providing no other train is on the line between these stations, which is not often the case on a busy line; and, besides, that is already done by the telegraph connected with the line.

M. T. H.

THE ARCHITECTURAL ASSOCIATION.

At a meeting of the Architectural Association, held on the 30th ult. the following gentlemen were elected as office-bearers for the session 1851-52:—

President: Mr. T. M. Rickman. Vice-president: Mr. George Truefitt. Committee: Messrs. Alfred Bailey, B. J. Benwell, G. R. Clarke, J. K. Colling, Henry Hall, C. F. Haywood, W. Kerby, R. Richardson, S. Egan Rosser, and J. D. Wyatt. Secretaries: Messrs. Arthur Cates and T. W. Goodman.

BUILDERS' BENEVOLENT INSTITUTION.

A meeting was held at the offices of the Institution, on Monday, the 20th ult. Mr. S. J. Stephens in the chair, when, after the disposal of the routine business, Mr. George Bird, the treasurer, brought forward a motion given at the previous meeting, purporting to reduce the sum necessary to be collected, previous to building almshouses, from 5,000*l.* to 2,500*l.* Mr. Bird stated, that it had taken seven years to obtain 1,250*l.* for that especial purpose, and as in accordance with the rules and original plan of the Institution, Almshouses were intended to be erected, and no other disposition could be made of the money obtained for that purpose, he thought they might commence when the amount should have reached the said 2,500*l.* and he also thought it but right that those who

had struggled to bring the Institution to its present position, and an arduous duty they had had to perform, should in their lifetime have the satisfaction of seeing some tangible result of the sums raised by the kindness and benevolence of the subscribers and donors. He was of opinion that the sum of 2,500*l.* would suffice for the purchase of six acres of land, draining, enclosing, &c. and when they had obtained that, it would give an opportunity to builders who might have a little surplus materials, such as stone, timber, bricks, &c. left at a finished job, to use them up in building an almshouse, of a plain, good, substantial exterior, but with every domestic comfort for the use of the inmates, and suited to their declining years. Mr. James Davis cordially seconded the motion, which was put, and carried unanimously. Mr. A. G. Harris, the secretary, having announced that Mr. William Lee, M.P. for Maidstone, had consented to act as president for the year ensuing, a vote of thanks was passed to the chairman, and the meeting separated.

BUILDING LAWS OF MEDIÆVAL LONDON.

In an article on "Mediæval London," in the *National Miscellany*, some particulars are given of the Institutions of Fitz-Alwin, the first mayor of London, A.D. 1190 to 1213, which we will quote:—

While they speak plainly of the imperfect civilization of the age, they give us a pleasing idea of the wealthy citizen and of the discreet men, his assistants in the task, who had wit to see the defects and wants of their city, and courage to attempt such a reformation of them as must have given great offence to many of the 'vested interests' of the day. These institutions, which in the language of that day are termed the Assise, were framed, we are told, first in the hope of checking the fires by which the city was so frequently ravaged, and next, with the intent to obviate or decide the quarrels of neighbours whose houses adjoined, or infringed upon, or overlooked one another. And the striking peculiarity of the institutions is this, that wherever, of two neighbours, one was either more willing, or better able by reason of superior wealth, to conform to the rules laid down for an improvement in the construction of houses, full power was given to him to carry out such improvements in despite of the perversity or the poverty of the other. It was ordained that neighbours should at their common cost erect a party-wall between their houses, of not less than 16 feet in height, and 3 feet in thickness, of which 3 feet 1½ foot should be in each tenement; but that where one of the neighbours was too poor to defray the cost of building, he should give 3 feet of his land on which his richer companion should build the wall of the aforesaid height and thickness, and for their common use. They might, jointly, raise the wall to any height they pleased; but in case that one would not go beyond the prescribed 16 feet, the other might, on his 1½ foot of wall, carry it up higher at his pleasure: they might construct a gutter at common cost for the use of both houses, but if they could not agree to this, and each constructed his own gutter, he must then convey its contents on to his own ground, unless indeed he could carry them *on to the king's highway*. If both parties wished to form arches, each on his own side of the wall, such arches were only to be each a foot in depth, so that the wall might still be a foot in thickness. When any one had erected a wall of the aforesaid height and thickness entirely on his own land, his neighbour was bound to construct a gutter and carry off the water for him on to his, the neighbour's land, unless he could convey it into the king's highway. And if the neighbour, to whom the wall did not belong, had any corbels on it, he could not add to those corbels, or alter their position, or remove them altogether, without the consent of the party owning the wall. Several other advantages were conceded to the man who built the whole of the prescribed wall on his own land and at his own cost, in order (as the ordinances stated) to encourage the citizens in the erection of those buildings; and it was slily added, that the neighbour of such an one might obtain the same advantages, by the erection of a similar wall on *his* land. If, however, any one had quite overlaid a common wall with his roof of canvas or timber, his neighbour might affix corbels and beams to the wall for the support of his own premises. No cesspool was to be made within 2½ feet of the neighbouring tenement, when the tenements were divided by a stone wall; but when there was no such division, the intervening space was to be not less than 3 feet.

BUILDERS' CONTRACTS.

Where a builder contracts to perform certain work, and the work done causes damage to old work, it is held that the builder contracting is bound to make good such damage, and is liable for expenses incurred in making good the damage.

BENNETT v. WADE. The plaintiff in this action, in the Marylebone County Court, is the physician of St. Thomas's Hospital, residing at St. John's-wood, and the defendant is a builder. The action was brought to recover 14*l.* 11s. 1d. expenses incurred through the defendant's asserted negligence.

Dr. Bennett stated, that he was owner of some villas in Clifton-road, St. John's-wood, and had contracted with the defendant to make some alterations at two of them. In August last, the defendant engaged to make a dry area round one of the houses, according to a plan. The area was to be a 3-feet ditch, and was designed to free the house of damp. As soon as he commenced operations, the defendant waited upon witness, and said that the tenant in possession had suggested an improvement in the plan, and had further complained that the proposed plan would not effect the object intended. The design of the tenant was to make an excavation from the garden wall to the house, as well as the area round the house. Upon looking at the proposed plan of Wade, and the tenant's, he told defendant he did not think the proposition at all necessary, but eventually he gave his sanction with the stipulation that the new plan should not entail upon witness any further expense than the first contract between them, and that the deviation was not to injure the premises. After the work was done, it was discovered that the area or ditch was so badly constructed, that the water did not run off, and that in excavating the ditch near the wall, proper precautions had not been taken to prop up the wall, and that for want of such precaution, the wall had fallen in. Upon finding this to be the case, he applied to defendant to rebuild the wall, and rectify the drain. Mr. Wade refused to do either, but sent in his bill for 91*l.* and eventually entered an action against witness for this amount, but which action was settled by witness paying 35*l.* and costs.

In cross-examination, the plaintiff denied that he paid this 35*l.* with the understanding that the damage done to the wall was to be a set-off between 35*l.* and 91*l.* claimed. He further added, that the contract was for 8*l.* 10s. to make the area, and that he rebuilt the wall as soon as Wade left the premises.

Mr. Learmont said, the area was not properly laid, and after a shower of rain the water remained in it, and soaked through to the house. Another builder altered the area, and the water ran off. The wall bulged in and became dangerous. Omnibuses passed by this wall, but he could not say that they knocked the wall in.

Mr. J. Alfred White said, he was the district surveyor of St. John's-wood, and that a bricklayer named Jones, asked him to go and look at some work concerning his duties as district surveyor. Upon going to look at the wall, he found it did not concern a district surveyor's duties. He saw that there had been an excavation, and that the wall had been underpinned, but not properly. There was no proper support, and it had not been done in a workmanlike manner

Mr. Jones, bricklayer, said he rebuilt the area and wall. The area was not bricked at bottom, and the bad fall prevented the water running off. The wall was in a dangerous state, caused solely by defendant's bad workmanship, and not underpinning and propping it properly.

Defendant's counsel first urged that when the 35*l.* were accepted in satisfaction of the claim of 91*l.*, it was clearly understood that it settled the dispute between the parties as to the area and the wall If not, he contended that as the alteration was made at plaintiff's tenant's desire, the damage caused by the deviation from the first contract should lie at the door of the plaintiff or his tenant, for had not this deviation occurred, his client would not have touched the wall. He contended that it would be a hard case for builders to be held liable for mishaps like these, arising from the interference of third parties, and from the deviation from the original plans and contracts; and submitted that the defendant could only be held liable so far as the original contract was binding.

Mr. Wade said, when the deviation was agreed to, he did not stipulate to do it for 8*l.* 10s. The material alone cost that. He had been a serious loser by the job. Rather than go to trial, he accepted the 35*l.* on his claim, with the understanding that the abandonment of the remainder was to satisfy the present claim of the plaintiff. At the time the job was being done, he pointed out to Dr. Bennett the danger the wall would be in, and that it would be an expensive job. The plaintiff did not say he would be put to no more expense than the original contract. Had sent in a bill to the tenant for the alterations he directed to be made. Had not been paid it. The whole of the work was done as well as could be.

Mr. Lawrence, solicitor to defendant, gave it as his opinion that the acceptance of 35*l.* and costs was the abandonment of Dr. Bennett's claim for damages to the wall. Had Mr. Wade not so have considered it, he felt certain the action would have gone on.

The Judge (Adolphus) said the evidence satisfied him that the work Mr. Wade did was not properly done, and that Dr. Bennett had sustained damage to the amount claimed, and was entitled to receive the amount of such damage of the defendant. With regard to the settlement of the present claim at the time the action of the defendant against the plaintiff was in abeyance, the evidence was very conflicting. He thought the balance was in favour of the plaintiff upon this point, and that Dr. Bennett did not abandon his claim as at present brought. Verdict for plaintiff, with costs.

VENTILATING GRATES.

CIRCUMSTANCES having prevented my customary regular perusal of your paper, I have only just noticed the excellent observations offered in your number of June 3rd last, by Mr. F Lloyd, on the "Warming and Ventilation of Rooms."

In reference to the principle of introducing pure warmed air into rooms, by means of the ordinary fire-grate (an idea which you very properly mention is far from being novel), I only wish to state that the manner suggested by Mr. Lloyd for carrying out the idea was, with a few variations, adopted by me sixteen months ago, in the execution of one of the new buildings in Cannon-street. The plan is as follows. A cast-iron hearth-plate, with perforations; a brick chamber underneath the same, into which the external air is brought, either directly, by an opening in the chimney-back, or by means of wrought-iron tubes between the joists. The entire back and sides of the grate are lined with fire-brick, so as to prevent the contact of any iron with the burning fuel. The whole space behind the fire-brick and from the hearth-plate upwards, forms a chamber for warm fresh air, which communicates again with a horizontal iron tube, extending along the top and front of the grate. In this last tube openings are provided, to conduct the air into the room, which may, of course, be made an ornament to the grate.

This mode of admitting the air into the room was thought preferable to that of admitting it over the mantelshelf, as by the latter method the air would be more likely to ascend to the ceiling before it had properly circulated in the lower portion of the room A valve and key are provided for regulating the supply of air.

These grates have now been in operation about twelve months, and have satisfactorily effected their purpose, viz. the ventilation of the rooms by a continual supply and circulation of fresh air, which may be warmed, or not, at pleasure. Should these few imperfect remarks be any encouragement to others seeking to attain the same end, I shall be glad.

HENRY DAWSON.

METROPOLITAN BUILDINGS ACT AND LOCAL ACTS.

At Marlborough-street Police Court the other day, Mr. Thomas Perry, silversmith, Oxford-street, appeared to an information laid under the Marylebone Local Act, for causing a projection to be added to his house in Oxford-street, contrary, as alleged, to the provisions of the local statute in question.

Mr. Petersdorff was for the parish; Mr. Ballantine and Mr. Hawkins for the defendant.

It was admitted that the projection in question extended about 2½ feet beyond the line of houses in Oxford-street.

Mr. Petersdorff produced the Local Act, and argued that the projection was an illegal projection under the Act, and that the parish had a right to require the defendant to remove it, and to pay the fine.

Mr. Ballantine said the New Metropolitan Building Act repealed all previous Acts. The clause in the Local Act on which the parish relied was copied from the old Building Act, and as the old Building Act was

repealed, it followed that the clause in question was also to be taken as repealed.

Mr. Petersdorff said the Local Act was unrepealed definitively, consequently it must be regarded as unaffected by the new Act.

After discussion on both sides in support of the opposing views,

Mr. Hardwick said the question was very important, and he was, and always had been, of opinion that one of the higher Courts alone was competent to deal with it. He should recommend the parties to agree upon some case, and take it for discussion into one of the superior Courts.

Mr. Ballantine said there was a ready way of bringing the question to a speedy issue. Let the parish pull down the projection, and then an action would be brought against them to try their right to do so.

Mr. Petersdorff declined to adopt that course. There was an appeal pending, and set down for decision on the 6th of July. He hoped the Court would postpone judgment until the decision was known.

Mr. Hardwick had a strong opinion on the subject. He believed that the general Act must be taken to override Local Acts, but in deference to the request made to him, he would suspend his judgment till the 10th of July.

OUR STREETS.

Having lately had a good deal of experience of street communication and Charing-cross, I wish to call attention, through the medium of your journal, to some annoyances which, I think, ought to be remedied.

First, as to the street-crossings about Cockspur-street, Charing-cross, and Pall-mall, at the Haymarket. These crossings, which require great watchfulness and alertness to escape the multitude of vehicles constantly passing, are swept by disgustingly dirty and half-naked children, who importune the passengers by asking alms, and putting out their hands before persons while in the roadway. I have daily witnessed great danger incurred. Besides, during the present wet summer, and the abundant use of the watering-carts, these roadways are in a perfect condition of slipperiness. The cunning urchins in most cases take care to sweep only a width of about 2 feet, forcing persons to give money to avoid a collision with their filthy persons, or to step aside into the dirt. The annoyance to ladies is peculiarly great, from a natural desire of keeping their dress from contamination, and from their usual timidity.

I venture to observe that, while we have scavengers and sweepers employed by the various parishes, some of these persons who are maintained at the expense of the inhabitants should alone be authorized to sweep crossings, wear a dress indicating their employment, and be forbidden to ask for alms.

Another serious evil in this populous neighbourhood is the want of "halting-places." It is true there are some, but they are so obscurely situated, that persons unacquainted with the neighbourhood are entirely at a loss where to find them. I suggest that placards should be placed in public situations, saying where these conveniences exist—on the same plan as we see the fire-plug notices on the walls of houses all over the metropolis.

Idler in London.

"SQUEEZING" MONUMENTS.

In one of the guide-books of the Crystal Palace it is said that "the churchwardens of Beverley Minster, Yorkshire, enjoy the privilege of being able to refuse a cast of the celebrated Percy Shrine." I do not know what reason the churchwardens have for refusing, but I do know, from my own observation, that "squeezers" have done a vast amount of injury to the exquisite carvings at Beverley. I have sketched many portions of the Percy Shrine, and also the niches and other work from the back of the altar, which is of similar character to the shrine, and, as Rickman says, "so full of ornament, and that ornament so minute, that few modern chimneypieces would require equal delicacy of execution;" and I can bear testimony to the injury which has been done by these *squeezers*. There are many portions of the foliage which have stems, acorns, and other parts so totally relieved and so delicate, that the least pressure will break them off, and they are being constantly broken off by persons taking casts. They also, in drawing off their clay, leave a great deal of it behind, which they do not afterwards take the trouble to clean out, consequently all the deeper parts are filled up with clay. I have had to get it out before I have been able to sketch, and in the clay thus got out is constantly embedded small portions of the carving which have been broken off. This is not only the case at Beverley, but at nearly every place where delicate work is found; but it is more particularly so at Beverley, which arises from the brittle nature of the stone and the extreme delicacy of the work. The parts thus lost are seldom noticed at the time; but if they are, they pass off as having been "done before." No one knows of this better than the *squeezers* themselves, but they, of course, are silent. Their anxiety is to get perfect casts; and when they have done that, they care nothing about the original. It is, however, a fact, that a vast amount of injury has been done in this way all over the country; but probably it will be said that those employed by the Crystal Palace Company never do anything of the kind; but I question that: they are most probably just as bad as others. I heard great complaints of them at Chichester Cathedral for the manner in which they had left a monument they had been *squeezing* there. I would beg to suggest that the authorities should have the Percy shrine copied without *squeezing*, having the carvings and sculpture modelled on the spot. Upon their engaging to do this, I think there would be little difficulty of their obtaining the desired permission.

J. K. Colling.

ANCIENT INSCRIPTION, WEST LAVINGTON.

The following curious inscription is from a brass at West Lavington, in the county of Wilts:—

"Heere doth in grave interred lye a Margueret by name,
Of John Dauntesay the last wyfe, a geme of peereles fame
Of children seven she mother was, so God did bleese that tree,
That yt shoulde not fruiteless remaine, but have posteritee:
But when death peerst her Howsebande deere, she past her wyddowes dayes
Lyke turtle true, of riche and poore she had and hath the prayse.
Twelve yeres a widdowe she did lyve, after her howseband dyed,
As chaste as ever anye did wythin this worlde most wide.
A matrone mylde she was most wise, just, godly, grave, and sage,
Her lyke, as triall truelye sheweth, is rare in this our age.
She never turnd away her eare from them that nyde did crave,
Her neyghbours poore, that lyvd in want relyeffee of her shoulde have:
The po're and comfortelesse from wronge she savd and defende,
Her prayse therefore doth live and laste though life be brought to ende.
Her wealth or verteous lyfe coulde not keepe her from darte of death,
Of January the nyneteenth she yeilded her last breath,
In yere of our Lorde a thousand five hundred seventy-one,
She felte the pangues of Death, that may eschewed be of none.
Her sowle wyth God assuredly endlesse joyes doth knowe,
Her bodye sleepes, and so shall rest untill the trumpe doe blowe."

"One thousande yeres, wyth hundreddes fyve and fyvtee
eyne full paste,
Jhon Dauntesay did change this lyfe for lyfe that still shall laste.
In the nyneteenth of Maye when springe all things unto mans use,
Even then this man that mortall wass his death coulde not refuse.
He had two wyves successivelye, by holy wedlockes right,
To whom he was as faythful as was ever any wight.
Seven children he had by the laste, and by the fyrst had fyve,
Through whom though lyfe be tooke awaye his name remains alive.
He was Esquyre, by office eake a Justice just also,
A proppe to poore, a frende to riche, to none at all a fo:
So when he had spent fortye yerres and fowre in vale of woe,
Death strooke, and strayte he was compelld out of this worlde to goe.
His carcas then that was but klay, to wrinkling worms is meate,
His sowle (hope is with God) possesdes in heaven a heavenly seate."

W. J. G.

Notices of Books.

Siluria. By Sir Roderick Impey Murchison, F.R.S. R.I.A. &c. Murray, Albemarle-street. 1854.

This is a very valuable geological work by a standard author. It contains a history of the oldest known rocks, slates, sand-stones, &c. containing organic remains, with a sketch of the distribution of gold over the earth, which is generally associated with these rocks, and is found chiefly where igneous or quartz rocks are intruded among slate rocks, although neither the one kind nor the other, where they do not *come together*, contain any such substance, a fact which seems to countenance very benignly the doctrines of the ancient sages (now almost admitted by our best modern chemists) that gold is a compound, however undecomposible, which may be (and as the sages assert has been) artificially produced. The main interest of Sir Roderick's work, however, does not centre in the mere relation of these ancient rocks to gold, although his geological knowledge of them led him to *anticipate* the existence of gold in Australia. It is of their organic products and their relative positions with respect to other rocks, more or less ancient, coal strata inclusive, throughout the earth, that this elaborate work treats; and it is profusely illustrated with sketches and diagrams. On the utility of such a subject, professionally, to engineers, and even to architects and builders, we need not speak; but its theoretical interest to all intelligent readers renders it worthy of special recommendation apart altogether from its practical or professional interest. The work is got up in all respects in a superior manner. Appended is a coloured geological map of the western districts of England (chiefly Wales), prepared from the index map of the geological survey.

Miscellanea.

Architectural Exhibition.—The Architectural Association is now endeavouring to obtain a gallery, and to establish an architectural exhibition. By all means: sincerely do I hope they may succeed; but at the same time let not the profession forget the Royal Academy. The architectural exhibition, if established, will be visited by our professional brethren, and no doubt by many others who take an interest in the fine arts; but I think it is not the way to make our art known among those to whom we look for support, viz. to *isolate our position*. I think we should consider the Royal Academy exhibition a means of bringing our art most especially before the eyes of that class of people. Do not let us therefore separate ourselves from our fellow-labourers,—painters and sculptors: if a disposition be shown by them to turn us out of the walls of the Academy, let us not quietly walk away ourselves, but rather command their respect: let us make a renewed effort to uphold our dignity. Pray urge the profession to the preparing of elaborate architectural drawings, and to maintain and improve their position among the exhibitors at the Royal Academy.—An Architect.

The Yorkshire Architectural Society.—At the meeting of this society at Skipton, after visiting the church and the castle, a public meeting was held in the large room of the Devonshire Hotel. The chair was taken by the vicar of Skipton, and papers were read:—"On some of the Churches of Craven," by the Rev. Wm. Boyd, incumbent of Arncliffe; "On the Excavations now in progress at Fountains' Abbey," by Mr. J. R. Walbran, of Ripon, F.S.A.; and "On the Priory of SS. Mary and Cuthbert, at Bolton, in Craven," by Mr. W. H. Dyke, of York, architect. On the following day some of the party pursued the appointed route, to investigate several of the Craven churches and the ruins of Sawgate Abbey; while others preferred taking the excursion to Bolton, arranged for the previous day, which was stormy. At the abbey of Sawley, until a short time ago, there was but little to be seen above ground. By the care of the Earl de Grey, the whole site of the monastery has been cleared down to its original level, and the entire foundations brought to light. Mr. Walbran, under whose superintendence the excavations had been carried on, explained the arrangement and purposes of the various buildings. The nave of the abbey has recently received six stained glass windows, from designs by Pugin, representing the history of our Saviour from the conception to the ascension; but it was deemed a matter of regret that the body of the church, in its arrangements, ill consorted with the beauty and richness which evidently it once possessed. From Bolton Abbey the party proceeded to Knaresborough, where they examined the castle, the parish church, St. Robert's Chapel, &c. It was announced that the next meeting of the society would be held in August, at Bridlington.

Cellar-flaps in London.—The prohibition and restriction to the use of cellar-flaps appear to be but very imperfectly known by district surveyors and the public generally: it may not be amiss to draw public attention to this highly salutary clause: it is quite time the nuisance be put down by the strong arm of the law: adequate provision can and must be made other ways, and the flaps should be so arranged as to be hung vertically in place of being traps to catch the unwary and impede and obstruct traffic. Schedule E.—Projections from walls of buildings over public ways.—"And with regard to all buildings hereafter to be built or rebuilt in reference to projections from the walls of such buildings, including steps, cellar-doors, and area enclosures, the walls of all such buildings must be set back so that all projections therefrom, and also all steps, cellar-doors, and area enclosures shall only overhang or occupy the ground of the owner of such building, without overhanging or encroaching upon any public way."—S.

CAUTION IN GIVING TESTIMONIALS. — In the Court of Common Pleas an attorney at Brentford brought an action against a builder at Camden-town, to recover damages on the ground that defendant had given to plaintiff a false representation as to character and respectability. The representation ran as follows: —"In answer to yours of the 11th, respecting Mr. Kingston, I can only say I have known him for a period of thirty years, and have done business for him, and should be very glad to execute his orders to any amount, as I believe him to be one of respectability and integrity." In consequence, as was alleged, of this testimonial, an agreement was prepared and executed, by which certain property was let to Kingston, upon the terms that he should pull down an old house and build new ones at a cost of not less than 1,200*l.*; paying nothing for the first year, but subsequently 65*l.* a year rent. Kingston, according to plaintiff's statement, took possession, and one part of his agreement he performed to the utmost, for he pulled down the house to its foundation, pulled up the drains to get at the old materials, and, as counsel said, "left not a brick behind." The materials were said to be worth about 400*l.*, but Kingston sold them all for 180*l.* and then took no steps to rebuild the new houses, and paid no rent. Plaintiff wrote to defendant about what had taken place, but got for answer that defendant could only repeat what he had already said of Mr. Kingston. The jury gave a verdict for plaintiff: damages, 400*l.*

TRIPE BOILERS.—Which is the way to get rid of an intolerable nuisance? Our workshops (Rosamon-street, Clerkenwell) have a tripe-boiler's abutting on them, and the stench from this "lawful trade" is filthy in the extreme. Our foreman on first coming on Saturday last was made so ill by it that he was compelled to return home immediately and go to bed, where he remained half the day, and then was not fit for anything, and he was also confined to his bed all Sunday morning: how is it to be remedied? The leases of the various houses have just fallen in, and fresh leases are to be granted, and the writer distinctly understood the surveyor that tripe boiling would *not* be allowed, but arrangements seem to have been made for its continuance. I may here add that I have resided on the premises from Midsummer, 1849, to Lady-day, 1854, and although few persons had better health previous to my coming here, yet I have been laid up every summer since, and was under the doctor's hands from April to October last year. Again I ask,—how are we to get rid of such a nuisance?—ONE WHO HAS SUFFERED.

THE MOUSTACHE.—We are sorry to have statements made to us to the effect that workmen such as painters, masons, or others, who have adopted the moustache from sanitary motives, have been rejected while offering themselves for employment, for no other reason, as they conceive, than that they have taken this measure as a preservative of health in their employment. Workmen are certainly justified in using such precautions as may have been proved to be useful in such instances, and since they have strong medical and other testimony and recommendation in favour of this very simple and natural appendage, we hope that employers, on consideration, will not countenance an injustice and a prejudice which, had we been, as of old, a bearded nation, would have been quite as ready, but with more reason, to put down all attempts to remove the virile token as now to prevent the resumption of it.

THE EDUCATIONAL EXHIBITION, ST. MARTIN'S HALL, was opened on the evening of the 4th, when Prince Albert was present and inspected the various collections. The purpose of the exhibition is most important, and good results must follow. The arrangement did not seem to us particularly clever, but we must take another opportunity to examine the exhibition.

ST. LUKE'S CHAPEL, MARYLEBONE.—The pillar-stone of this building was laid by Lord John Russell on Tuesday in last week.

A PRIZE FOR ARCHITECTS.—In answer to a letter purporting to be from "A Young Architect," with the above prominent heading, which appeared in your journal of the 24th *ultimo*, I am induced to trouble you with this note. I assure "A Young Architect" I had no intention of offending the dignity of that honourable body of men of whom he professes to be one, nor from the result of my advertisement does it appear that I have done so, several highly respectable firms having thought it worth their while to enter upon the competition as well before as subsequently to the appearance of your correspondent's letter. I intended to offer such a sum as would adequately remunerate a professional man for his trouble, irrespective of advantages which might follow; and no one would regret more than I, should I have failed in doing this in the opinion of persons competent to judge.—THE ADVERTISER.

*** It is to be regretted that "the Advertiser" was not better informed.

THE ARCHITECTURAL CLASSES, UNIVERSITY COLLEGE.—The annual distribution of prizes to the classes of Art in the University College, took place on Friday, the 30th of June, the Bishop of S. David's in the chair. Professor Donaldson announced the awards for the classes in Architecture and Construction, as follows:—*Fine Art: First Year's Course.*—Prize and 1st certificate, H. W. Sich; prize and 2nd do. H. H. Smith; prize and 3rd do. John Hebb; prize and 4th do. E. A. Gruning. *Fine Art: Second Year's Course.*—Prize and 1st certificate, John Shaw, jun.; prize and 2nd do. C. W. Wilson; prize and 3rd do. equal, Thomas Sich and Charles Luck.—*Construction: First Year's Course.*—Prize and 1st certificate, H. H. Smith; prize and 2nd do. J. H. Stevens; prize and 3rd do. Martin Underwood; prize and 4th do. H. W. Sich. *Construction: Second Year's Course.*—Prize and 1st certificate, C. W. Wilson; prize and 2nd do. Thomas Sich; prize and 3rd do. Isaac Wilkinson; prize and 4th do. John Crawley.

THE MANUFACTURE OF SLAG INTO BRICKS, PIPES, &c.—I have been endeavouring for some years past to perfect this manufacture, but not having the command of the waste material, and living at present some distance from any ironworks, I have not been able as yet to persuade any one in the trade to try the necessary experiments, although I have machinery by me which only requires the slag to be run into the mould direct from the furnace, and when pressed, a perfect brick, of any form or shape, is made, fit to be turned out, and ready for annealing in less than two minutes; when annealed by the waste heat of the furnace, it is fit for use. So that the only cost of this manufacture to the *ironmaster* will be a little labour (perhaps less than the present labour in throwing it away), and the cost of moulds, presses, ovens, and moulding-shed, in addition to the iron smelting plant, not exceeding 300*l.* I have formed a joint-stock company to work my patents, and I trust we shall soon bring some superior articles into the London market, which will tend in a great measure to relieve the distressing diseases so ably shown in the leading article of your paper.—W. G. ELLIOTT.

THE UNPROTECTED WATER-GATE.—I was one of the jury on the trial anent this gate and the piece of land by the water-side which had been formed into an ornamental spot for taking the air by the inhabitants paying a certain rate provided for by act of parliament. I have reason to remember this case, for up to this day I do not feel satisfied with the verdict *required and therefore given*, being one of five who considered the trustees right. But the judge ruled, "if they were right, it was their duty to show that they were duly chosen according to the act of parliament," and consequently that their predecessors for a hundred years, the duration of the act, had handed down duly the right authority of election, &c. There was only one material witness—if my memory serve me, a chandler of some kind,—who alleged he could not land his coal as heretofore by reason of the new vigilance in keeping the place suitable for promenade. The solicitor, had he lost the trial, would probably have been *unprepared to pay costs*, which I have since heard was a heavy affair—*hundreds of pounds!*—and paid by those who never derived any other reward than the distinction of being chosen trustees out of respect and regard for their brother ratepayers. I fully expected to have heard they had carried the matter further, but "it is hard to kick against the pricks," and very like risking good money against the "winning ways" of a great mind who tries the public right for the public good.—O.

ENCLOSURE OF HAMPSTEAD-HEATH.—It appears that, notwithstanding the opposition of Lords Brougham and Campbell, of the answers of the Judges who have been solemnly consulted over and over again, and of five previous rejections by their own House, a majority of the Peers last week gave their assent to the second reading of the Hampstead Enclosure Bill—a measure now disguised under the less startling title of the "Finchley-road Bill," but it appears essentially the same Bill, although proposing but a precedent for the enclosure of the whole heath. "It would be too great a scandal if the decision were maintained," says the *Times*, "but happily there is a *tempus pœnitentiæ* for the Peers."

A WORD TO EMPLOYERS.—There is a limit to toil set by God. He who has given bounds to the ocean—who has placed the duration of light and darkness under rule—who has put all things under law—whose universe is an embodiment of order, has made it impossible to continue toil beyond a certain limit, without detriment. And if that limit be passed, injury succeeds. The man made rich by the long-hour system may be a murderer of men—the destroyer of morals and happiness—the adversary of souls; and may hold riches as Judas held the thirty pieces of silver: his gains may be the price of blood!—*Rev. S. Martin, Westminster.*

BUILDING SOCIETIES.—On Saturday, in the Lambeth County Court, an action was brought by Mr. Hooker, the landlord of the Red Cap Tavern, Camberwell, against Mr. Davis, the managing director of the Gresham Building Society, and formerly a director of the London Co-operative Benefit Building Society, to recover the sum of 10*l.* for the rent of a room in the plaintiff's house for the use of the society. The action was against the defendant in his former capacity. The defence was, that the sub-treasurer was the person who hired the room, and was therefore liable for the rent. The judge was of opinion that the defendant, as a director of the society, was liable. The plaintiff might have sued every director jointly or collectively. Judgment for the plaintiff, with full costs.

WAY OF USING WATER POWER: HYDRAULIC ENGINES. — Wherever water can be had from a height so as to constitute water power, or in whatever town an abundant supply of water, under pressure, either has been or can be provided, there the "water power" may be used to immense advantage, especially on a moderate scale, where high speed with small power is required, as for working printing-machines, or perhaps mortising-machines, turning-lathes, &c. instead of by steam-power, or for lifting, as by cranes in warehouses, or on quays, and for many other purposes of daily and hourly occurrence in towns, as well as in the country for farmyard and other operations. Thus with water issuing from a reservoir at an elevation of 400 feet, a pipe discharging only eight gallons a minute will give one-horse power; and so in proportion may additional power be had, to the extent of the supply provided; and as water can often be easily had from a height of even 1,000 feet to 1,500 feet, the quantity required for each horse power will, of course, be thus proportionally far less than if obtained from a height of 400 feet only. Moreover, the engines wherewith water power may be so scientifically and so economically worked with, are mere toys in comparison with steam-engines of the same power. Thus a water-engine (Sinclair's), in use at Dundee, for the printing of the *Dundee Advertiser*, and which works a machine weighing more than a hundred times its own weight,—namely, a one-cylinder machine of the largest size, weighing nearly five tons, and not easily worked by four men, producing 900 impressions an hour,—occupies no more space than would be required for a small box, and one fourth only of that required for the working of the ordinary fly-wheel. The size of the sole-plate on which the engine stands, is only 18 inches by 22 inches; the cylinders are only 2½ inches in diameter, with 5 inches length of stroke; and the top of the driving pulley is under 36 inches from the floor. Nevertheless, this little engine, without even a boy being required to attend to it, works the machine alluded to, at the rate of 1,200 impressions an hour. This kind of water-engine, it is true, has been said to give twice the power of some others of the same size, but even twice the size is a matter of minor importance compared with the convenience, the safety, and the other advantages. We have often urged the use of such engines, and anticipated that their immense importance and advantage would yet come to be appreciated, as we still are sanguine that they will.

TRADE FESTIVITIES.—At the opening of a branch railway at Corsham, connecting the Box-hill Ground Stone Quarries of Messrs. Randell and Saunders with their Corsham Down Quarries, and through them with the Great Western Railway, the workmen and employers, together with other friends, in all about 300, partook of a substantial repast under a tent erected on the ground, and afterwards adjourned to a musical entertainment by Dr. Shaw, whose services were engaged by the employers for the evening, when about 600 additional visitors were admitted, including the wives and children of the workmen, who were also treated with refreshments during an interlude.

VALUE OF LAND NEAR SOUTHAMPTON.—A portion, perhaps a quarter, of the estate called Bevois Mount, bought by Mr. Betts of the late E. H. Hulton, esq. a few years ago for 25,000*l.* was offered for sale this week, by Mr. Perkins, at auction, when 13,000*l.* was offered for it, and refused, it being bought in at 14,000*l.* If the proprietor had been disposed to sell for the amount offered, he would have had land left of double the value, besides the mansion and park-like grounds. This estate was formerly the seat of Lord Peterborough, the friend of Pope, and the poet wrote some of his poetry here.—*Hampshire Advertiser.*

PROPOSED NEW CHURCH AT MILDMAY-PARK, NEWINGTON-GREEN.—On Thursday in last week a public meeting was held at Ball's-pond, Islington, to adopt measures for the erection of a new church in the district of St. Paul's. The church is designed to contain 1,070 persons, and estimated to cost about 4,900*l.* About 2,000*l.* remains to be raised by voluntary contributions. Resolutions in favour of the undertaking were unanimously adopted.

STATISTICS OF FIRE INSURANCE.—Mr. Hyde Clark has had printed a few pages containing some interesting statistics, of which we shall give a brief abstract. The total amount of the Government tax on fire insurances in the three kingdoms is 1,273,360*l.* representing property valued at 848,906,000*l.* exclusive of 60,984,423*l.* the value of farming stock insured. The total value of property in England insured is 818,944,000*l.*; in Scotland, 52,800,000*l.*; in Ireland, 38,145,000*l.* This property chiefly consists in buildings, furniture, and goods. Basing on these data the total value of property, uninsured as well as insured, in England alone, is estimated at probably 5,000,000,000*l.* Of sixty-one insurance companies throughout England, thirty-five are metropolitan. There are besides, eight Scottish and two Irish companies. Five of the metropolitan companies do 400,000,000*l.* of assurance, or nearly one-half the English business. Four Lancashire offices do 51,100,000*l.*, or more than both Scotland and Ireland together. Norwich is a great fire assurance centre, the five Norwich companies doing 60,600,000*l.* Mr. Clarke proposes either the total abolition of the obnoxious tax on insurance policies—a tax on prudence, as we have often said—or the raising of the present amount only, from all property, so diminishing its pressure on the prudent. In Norway, some Swiss cantons and some German states, assurance against fire is a compulsory obligation and constitutes a State tax, every householder being obliged to contribute to the common fund, and, in case of loss, receiving compensation from it. This is found to work well, and, in Mr. Clarke's opinion, could be as well administered here.

MONUMENT TO MONTGOMERY, THE POET.—Mr. John Bell has been selected, without competition, to execute the memorial to the late James Montgomery, to be erected at Sheffield.

CARRIAGES FOR THE EGYPTIAN RAILWAY.—A Sunderland paper states that a ship lying there, and bound for Alexandria, is taking in a number of first and second class carriages, intended for the Desert Railway. The first-class carriages are finished in good style, but the others are like luggage-vans. They are formed of iron, have no windows, except on the roof, and weigh about 2½ tons each.

SWISS RAILWAYS.—The formal opening of the works of the South-Eastern Railway of Switzerland, in the cantons of St. Gall and the Grisons, took place on the 21st ult. There were present the president of the company, Mr. André de Planta; Mr. Gurney, representing the English section of the board; and Mr. G. W. Hemans, the engineer-in-chief, and his assistant. The South-Eastern Railway of Switzerland is one of European importance. It commences at the Lake of Constance on the north, and at the Lake of Zurich in the north-west of Switzerland, and the two sections uniting at Ragatz, near the baths of Pfeffers, continue in one trunk to Coire, the capital of the Grisons, at the foot of the Alps. The line to this point, with a branch to Glarius, will be 107 miles long. When ultimately connected with the Sardinian and Italian railways, this line will form the shortest route to the Mediterranean and the East.

FOUNTAINS AT THE LIVERPOOL DOCKS.—There have been recently erected along the line of docks, from George's to the Clarence, a number of fountains, supplying constantly pure water for drinking. Metal drinking-cups are attached. These fountains have been erected at the expense of an individual, Mr. Mellor, with the sanction of the dock committee. The water supply is provided by the water committee without charge. We have often urged the erection of just such an excellent accommodation to the temperate and the poor of London. If no public benefactor such as Mr. Mellor exists in the metropolis, might not our efficient Home Secretary order a few simple fountains with metal cups to be placed on the main lines of road and in the parks? He would have the heartfelt thanks of thousands every summer as its thirsting heats came round.

BOARD OF HEALTH "JOBS."—Under this title, the *Sherborne Journal* says, that at Taunton there were three tenders for the last drainage contract, and the local board accepted the highest, but that the person whose tender was lowest is now actually performing the work, having taken the job, at a figure very near to that in the lowest tender of him whose tender was accepted.

TO TAKE INK OUT OF MAHOGANY.—Mix in a teaspoonful of cold water a few drops of oil of vitriol, says a contemporary, and touch the spot with a feather dipped in the liquid. We have tried this, and are inclined to think that with a little management it may be useful, taking care neither to exceed nor to come short of the due quantity of acid; too little is doing no good, and too much only substituting one stain for another. In the latter case, or where the colour is made lighter than the rest of the wood, perhaps a little linseed oil would be the readiest and best restorative.

TENDERS

For St. Helier Cemetry Chapel, two lodges, and entrance, exclusive of iron gates. Messrs. Poulton and Woodman, of Reading, architects. Quantities supplied:—

TO GENTLEMEN, ENGINEERS, OR MECHANICS.

A GENTLEMAN, having no further use for one of Whitworth's Patent LATHES, is desirous to SELL it, at half the original cost which was 15l. It is quite as good as new, and is 6 feet 6 inches long, and will take in 14 inches in diameter. It has eight speeds, three chucks, full length guide screw, open nut and screw wheels, to render the slide self-acting for surfaces; also adapted for turning cones, sliding, or screw cutting. May be viewed at Mr. SMITH'S, Tudor-house, Groveland, Camberwell.

GENTLEMEN finding their own Material in the building trade, can meet with a practical Man to CONTRACT for the LABOUR of the BRICKWORK, CARPENTERS' WORK, and JOINERS' WORK.—Apply by letter, post-paid, to A. B. 10, Star-street, Edgware-road.

PATENT SANITARY GAS SHADES.—These Shades, manufactured expressly by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto rendered the use of gas so objectionable in dwelling houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTORS', Crispin-street, Spitalfields, London.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply Trade generally with their Colours, which for quality and firmness of tone are unequalled. Samples of the Colours may be seen at the Office of the Company, No. 71, Pall-mall. A. Hess, W. PROSSER, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 3,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1852:—

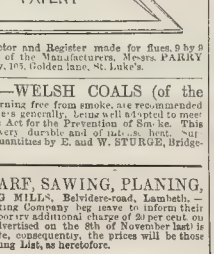
"An important feature in the contract for the maintenance of the Permanent Way is, that the contractors are bound to replace those compositions, which have proved inferior. Fish Joint, or certain other improvements, are here first adopted."

Every information may be obtained on application to Mr. CHARLES MAY, C.E., the Manager; or Mr. WILLIAM HOWLEN, the Secretary, 20, Great George street, Westminster.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Contractors and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS.—This patent has received the unqualified approbation of some of the most eminent engineers of the day, as the most effective economical and perfect joint in use at the present time. The simplicity of its construction is such as will allow of its application to any line of railway, without causing the slightest inclination to the ordinary traffic during the time that it is being laid down. The same in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and wherever adopted must very considerably decrease working expenses. To railway companies having old and bad roads, the principle is particularly advantageous as its application will not only restore the road to a perfectly safe and serviceable state for many years, but, at the same time, bring into efficient use all the old material it may consist of. To railway world in general, it is of the greatest value, and wonders of it are noted to be in it, and is most simple and economical in principle. Every information will be given, and models forwarded for inspection on application to the Manager, at the Offices of the Company, Wolverhampton.

CRYSTAL PALACE.—FREQUENT TRAVELLERS can INSURE against RAILWAY ACCIDENTS, by the year, terms of years, or for the whole of life, on application to the Booking Offices at the principal Railway Stations, and at the Office of the Railway Passengers' Assurance Company, 3, Old Broad-street.

WILLIAM J. VIAN, Secretary.



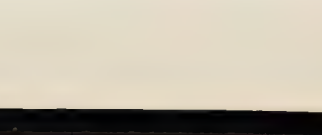
PURE GAS.—TO GAS COMPANIES, ENGINEERS MANUFACTURERS, and OTHERS, PATENT CLAY PURIFICATION.—No cheap process has yet been discovered for freeing gas from ammonia, and the removal of the bisulphuret of carbon is the monster nuisance of gas-burning has been given up in despair. Clay removes both these impurities, and when taken from the purifiers the bisulphuret of carbon is visible completely. Burning the clay. The light of gas is increased in proportion to its thorough purification. The proprietors of this patent are now ready to grant licences for its use on terms, and directions for the employment of clay, may be obtained from Mr. JOHN WHITTAKER, Agent to the Patentees, Gas Works, Wakefield.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATOR has been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to Railway Stations, Steam Boats, &c. Testimonials and other information forwarded on receipt of a post-age stamp. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the sole patentee and sole maker.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved

CIRCULAR ARNOTT VENTILATORS,



which are more sightly than the square ones in general use, much less in bulk to cut out of order, and the flaps, being done from the top, do not admit any smoke caused by down draught.

Price, finished, from 6s. 6d.

D. and E. BAILEY, 272, Holborn.

IMPROVED CONSTRUCTION of CHIMNEYS, by building in a contractor and register at the commencement of the flue, covering in the flue at the top, and inserting mouth-pieces for the escape of the smoke, to prevent the flues acting on each other, thus avoiding smoky chimneys, unsightly cowls, &c.

The Chimney Contractor and Register made for flues, 9 by 9 and 14 by 9.—To be had of the Manufacturers, Messrs. FARRY and SON, Atlas Foundry, 105, Golden lane, St. Luke's.

SMOKE ACT.—WELSH COALS (of the finest quality) burning free from smoke, are recommended by the Lords of Committee generally, as well adapted to meet the requirements of the Act for the Prevention of Smoke. This Coal will be also found very durable and of intense heat, supplied in large or small quantities by E. and W. STURGE, Bridge-wharf, City-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible dispatch. Also mouldings in great variety. A large stock of Deal ends kept in bond for export.—Southwark-bridge Wharf, Bankside.

REDUCED PRICES.—EDWARD SIMMS (late William Cleaver), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned Deals and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 4 inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory Wilton-road, Pimlico Basin.

SAMUEL TRICKETT,
STONE MERCHANT.
Prices and samples furnished Delivered to any part.
Address—VICTORIA STONE WHARF, ISLE OF DOGS.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

BRAMLEY FALL! BRAMLEY FALL!! Mrs. ANN HARLER informs Engineers, Contractors and Builders that she is able to supply the above stone to any extent. Will guarantee to supply any block of stone required.—Apply for samples, prices, &c. to SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.—Fire Bricks and Clays.

ABERDEEN and PETERHEAD POLISHED GRANITE. — Chimneypieces, Monuments, Columns, Pedestals, Vases, Monumental Urns, &c. executed on the shortest notice, and at the lowest possible prices, on application to JAMES WRIGHT, Manufacturer, 113, John-street, Aberdeen; or A. and F. MANUELLE, Granite Merchants, 12, Trinity-square, Tower-hill, London.

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves, Cisterns and every description of Slab work, Cisterns, Sinks, Slate Tanks, with plate-glass sides, for fish-zoophites, &c. and every description of Slab work wrought and fixed on the shortest notice; 1½ inch Slate Paving, in runs, planed on one side, and squared, fitted to lay, warranted stronger than 3-inch York, 5d. per foot super. Baltic Wharf, Commercial-road, Lambeth.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Work Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate the invaluable PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Build r, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict much injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear. N.B. The Tariff for 1854 is now ready.
Purbeck Slate Works, 30 and 40, Upper Belgrave-place.

A SLATE-SAWING MACHINE, Powerful CRUSHING-MILLS, FRENCH and PEAK MILLSTONES.—FOR SALE, a Large Self-acting Slate-sawing Machine; will cut twelve inches of thick slate per minute with one man only. Also, Powerful Iron and Stone Crushing-mills, or Edge-runners; French and Peak Horizontal Stones; a One-ton Portable Weighing-machine, and a Two-horse Steam-boiler. Can be seen.—Apply to C. T. CHRISTIE, Millwright and Engineer, 19, Broad-street, Lambeth, and 113, Vauxhall-walk.

LARGE YORK LANDINGS, SQUARED PAVING STONES, TILES, FIRE BRICKS, LUMPS, &c. TO BE SOLD Cheap; part of materials taken out of the Camden Place Glass Works.—For terms and particulars apply at Camden Works situate on the canal), Hawley crescent, Camden-town.

TO STONE MERCHANTS AND OTHERS.

TO BE SOLD, by PRIVATE CONTRACT, THREE STONE DRAGS, in excellent condition; two are double-shafted, one calculated to carry 14 to 16 tons, the other 9 to 10 tons, and the single shafted 6 to 7 tons. Also, Two Stone Carts, in good repair, and a four-legged Crab, or Crane, capable of lifting 20 tons.—To be seen on the Premises, by application to Mr EVANS, Grouse Inn, Darleydale, Derbyshire.

TO BOILER MAKERS, ENGINEERS, BUILDERS, AND OTHERS, requiring water at le premises.

TO BE LET on LEASE, a capital WHARF, with good frontage to the Thames, and excellent YARD, with good brick built, covered, and commodious carpenter's and smith's shop, with punching and shearing presses, tools, &c where a good smith's business is being carried on, and might be greatly increased together with store, counting-house, and stables. Is situate within half a mile below Greenwich College, in a rapidly improving neighbourhood. Also, WHARF LAND TO BE LET, and land suitable for manufactories or small houses, which are in great demand. Apply to Mr. W. DREW, Morden-wharf, East Greenwich.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs Bellingham's Distillery, Queen's-road, Dalston, in Plots, which will be pointed out by Mr HARRIS, at the Counting house on the Estate; and in the parish of ISLINGTON, at Grove-road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house, on the Estate. Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Guildhall.

BRENTWOOD, Essex, within 200 yards of the Railway Station.—To BUILDERS, SMALL CAPITALISTS and others.—TO BE SOLD, or LET on lease, a few hundred feet of FREEHOLD BUILDING GROUND (land-tax redeemed), excellent drainage, and good supply of water, eligibly situate for the erection of small property, which is in great demand. Also for a factory.—Apply to W. R. PRESTON, Esq. Solicitor, Brentwood; or Mr. JOS. BALL, Queen's Arms, Newgate-street, London; or G. BUCKLER, Esq. Hill-house, Shenfield, Essex.

BROCKLEY-HILL PARK ESTATE, FORES-HILL TO BE LET, on building lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden, of nearly five acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

BUILDING LAND at CROYDON and at NEW CROSS.—TO BE LET, by TENDER, for a term of years, a Plot or Piece of LAND, well adapted for building private houses or shops, situate in the high road from London to Croydon, opposite the Croydon Railway Station, and adjoining the Fox and Hounds public house, having a frontage of 109 feet facing the high road, and a frontage of 131 feet facing the road leading from the high road to Broad Green-road. Also a plot or piece of land at New Cross, Surrey, adjoining the Railway Tavern, near the New Cross Station, having a frontage of 64 feet facing Hart's-lane, and a depth of 80 feet.—Plans of the ground may be seen and further particulars obtained at the Offices of Messrs. VANDERCOM, CREE, LAW, and COMYN, 23, Bush-lane, London, to whom Tenders for both or either of the plots must be delivered in writing on or before the 24th day of JULY instant. Satisfactory references will be required before any agreement is entered into with any party tendering, and security will be required for the due performance of the agreement. The Proprietor does not bind himself to accept the highest or any Tender

HEREFORDSHIRE.—TO BE LET, on lease or otherwise, and either together or separately, extensive STONE QUARRIES, situate in a favourable situation for working, within 13 miles of a station on the Shrewsbury and Hereford Railway, yielding an inexhaustible supply of paving, wall, and block stone of the finest quality and of almost any dimensions.
Also, an extensive BRICK, TILE, and PIPE MANUFACTORY, nearly adjoining the above, now in full work, and commanding a great extent of the finest clay suitable for the best quality of goods manufactured, and which are allowed to be equal to the Broseley.
Also, a LIME-KILN and extensive LIME ROCK, having a constant demand in the neighbourhood
The above have hitherto been in the hands of the proprietor of the estate.—Apply to Messrs. PARKER and GOLDINGHAM, Solicitors, Worcester.

CRYSTAL PALACE.—TO BE LET, on lease, for long terms, at moderate ground rents, most eligible FREEHOLD BUILDING LAND for the erection of terraces, shops, and other residences, situate directly opposite the railway termini, where a first-class tavern is now being erected, and overlooking the Palace, park, and grounds, and at Central-hill, Norwood, near the Lion Tavern, where houses are in great demand and produce high rents. Also at Ilford, near the Barking-road station; and at Hackney, overlooking Victoria-park, near the station now forming, at Hackney-wick, comprising Regent's-canal, Eastern Counties, London and North Western and Tilbury Fort Railways. Situation, healthy, sewers and roads complete, with advances to respectable builders.—For plans and particulars, apply to Mr. JAMES BRAGG, Surveyor, 5, Devonshire Villas, Rotherhithe

BUILDING LAND TO BE LET, at Norwood, close by the station, term, 1,000 years; Stratford, near railway workshops, term, 100 years; Plaistow, adjoining Victoria Docks, term, 1,000 years.—Apply to Mr WILLIAM ELLISON, Architect and Surveyor, 19, Stainsby-road, Lunchouse.

RICHMOND HILL, SURREY.—LAND TO BE LET upon long Building Leases. The ground landlord is ready to supply bricks at low prices and long credit. Also moderate cash advances.—For plans and particulars apply to Mr. BLENKARN, Architect, 3, Size-lane, City, and Richmond-green, Surrey.

BUILDING GROUND TO LET, in Hanover-street, immediately adjoining Long-acre, having a double frontage.—For plan and particulars, apply to Mr. BARLOW, 11, Portman-street, Portman-square.

CAPITAL INVESTMENT.—TO be SOLD, in the parish of St. Pancras, a piece of FREEHOLD BUILDING LAND, suitable for building a six-roomed house, immediately; 71 feet 3 inches by 16 feet frontage. Price only fifty guineas.—For particulars apply at 15, Sussex-street, Tottenham-court-road.

TO BE SOLD, at Anerley, within a quarter of a mile of the Crystal Palace, a PLOT of FREEHOLD LAND, 55 feet frontage, 360 feet deep.—For particulars apply to T. C. T. 70, Charles-street, City-road.

TO BUILDERS AND OTHERS.

TO BE SOLD, the Lease (of about 99 years) for half their cost, the six eventually-built CARCASES of a pair of semi-detached Villas, situated in the Seven sisters-road, Holloway. Half the purchase-money may remain unpaid.—Apply to T. H. 9, Queenhithe, City.

TO BE SOLD, at FINCHLEY, Middlesex, nearly FIVE ACRES of FREEHOLD LAND, with a frontage to the great north road at its junction with the Finchley-road, six and a half miles from the Regent's park. This land is surrounded by buildings. Part of the purchase money may remain on mortgage if required. Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery-lane

FREEHOLD BUILDING LAND.—For SALE, a few PLOTS, of 100 feet frontage by 285 feet deep, at 75l. per pot, delightfully situated in Surrey, a short distance from the Carshalton Station of the London, Croydon, and Epsom Railway, about eleven miles from London, in a road where several hundred feet of frontage have already been sold for building purposes. Apply to Mr SLADEN, Solicitor, 35, King-street, Cheapside; or Messrs. BROWN and ROBERTS, 22, Throgmorton-street, London.

SANDWELL PARK ESTATE.—BUILDING LAND and proposed Parks for Birmingham and the South Staffordshire Coal Districts situate in the parish of Harborne and West Bromwich. The first division of the plan for laying out this magnificent estate for building purposes is now completed, and is thus arranged:
SANDWELL PARK, 250 acres of this is proposed to be kept as an open Park. 140 acres, surrounding this, and forming some of the most beautiful spots of Sandwell, will be appropriated for the erection of first-class villa residences, thus giving an opportunity to the lessee of adding to the comforts of his house, by attaching to it an extent of land, great or small, whether for pleasure-ground, or small farm, as he may desire.
SANDWELL FRONTAGES, adjoining for nearly a mile and a half the Birmingham and Wolverhampton turnpike road. These will be let in lots of any frontage, by a depth of 200 feet, for the erection of dwelling-houses of an annual value of 20l. and upwards.
SANDWELL BREECHES. This portion of the estate comprises between 40 and 50 acres of land in the most eligible part of West Bromwich, and will be appropriated for Shops, Warehouses, Offices, Inns, and other commercial purposes. The sub-division roads have been planned with much care, and every attention given for the thorough drainage of the premises.
The estate thus divided will be let on building leases for ninety-nine years, by which means the lessor is enabled to prevent the injury to property, and annoyance to occupiers which so often occurs, where good buildings are erected contiguous to small freeholds. The wealthy manufacturers and iron-masters will be enabled to enjoy a suitable and gentlemanly neighbourhood, on a healthy soil, in a beautiful country, most conveniently situated for the business of their large and populous towns adjacent. The managers and clerks of the numerous large establishments may unite with a profitable investment of their money a pleasant dwelling for their families, on the first or second rising the turnpike-road, with the fine timber and wood of Sandwell coppices at the back, whilst good roads, good drainage, and good ventilation will be secured to those who become the inhabitants of that part of the estate called Sandwell Breeches. Lithographic plans are now ready, and will be sent, with any other information that may be desired, on application to Mr NICHOLS, Architect and Surveyor, West Bromwich; Mr. MOUSLEY, of Sandwell, near Birmingham; and at the Offices of Mr. THYNNE, 11, Great George-street, Westminster.

LONDON and COUNTY FREEHOLD LAND SOCIETY, Central Offices, 4, Cannon street West, City. A. W. HAYMAN, Secretary.

SYDENHAM.—To BUILDERS.—Two CARCASES, ten rooms each, semi-detached villa residences, situated in Sydenham Park, are offered at a rent equivalent to five per cent. upon the money advanced upon them. The ground-rent is moderate; the sum required to build them about 440l.—For particulars apply to ALLEN, SNOOKE, and STOCK, 8, Duke-street, Southwark; or Mr. TUTTON, Railway Station, Sydenham.

ROYAL ACADEMY of ARTS, Trafalgar-square.—The Exhibition of the Royal Academy of Arts will CLOSE upon SATURDAY, the 29th instant. Admission (from Eight till Seven o'clock), One Shilling. Catalogue, One Shilling.

On view, for Sale, a splendid Collection of Statues, Groups, Fountains, Chimney-pieces, &c. arrived from Italy, at 481, New Oxford-street, opposite Museum-street.

ROYAL MANCHESTER INSTITUTION, JULY 4, 1854.—NOTICE.—Artists intending to contribute to the Annual Exhibition of the above Institution, are respectfully reminded that the latest day on which their works can be received by Mr. GREEN, 14, Charles-street, Middlesex Hospital, London, will be the 6th of AUGUST.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Baudekin.

CARPETS, plain or in rich Velvet pile, with appropriate Borders.

PAPER-HANGINGS of various kinds.

OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture

The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with its ancient character.

14, Wigmore-street, January, 1853

Satisfactory reasons will be given for the disposal of the same, and further particulars, by application to Mr. BOWES, Architect and Surveyor, 2, Princes-terrace, York-road, Battersea.

MARYLEBONE ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES, Incorporated by Royal Charter limiting the liability of the shareholders to the amount of their respective shares.

Capital, £50,000 in 10,000 shares of £5. each.

DIRECTORS.

Chairman.—Joseph Grote, esq.

R. J. Bagshaw, esq.	S. H. Harlowe, esq.
F. Bridgman, esq.	Charles Heberden, esq.
R. E. Broughton, esq.	Mr. George Poland.
Sir E. N. Buxton, bart.	Lord Dudley C. Stuart, M.P.
John Cuninffe, esq.	G. Spencer Smith, esq.
Frederick George, esq.	Josh. Wm. Thrupp, esq.
W. G. Habershon, esq.	

HONORARY ARCHITECT.—W. G. Habershon, esq.

AUDITORS.—John O. Hanson, esq.; Thomas Hunt, esq.

BANKERS.—Sir Samuel Scott, bart. and Co.

SOLICITOR.—Mr. Charles Rosser Stokes.

The object of this Association is to take on lease or purchase such property in the parish of St. Marylebone as can be obtained, with the view of providing for the industrious classes, well drained, ventilated, and cleanly habitations at as low a rate as shall be remunerative; and it is confidently expected that this beneficial object can be carried out, and a fair rate of interest returned to the shareholders on the capital invested.

Shares to an amount exceeding £2,000 have been already subscribed for, and the first call of £1. per share is paid up.

Applications for shares may be made to the Secretary, 28, Dorset-street, Portman-square, where prospectuses, forms of application, and every information relative to the Association can be obtained, and the list of shareholders inspected.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform Railway Directors, Public Companies, Landed Proprietors, Noblemen, Gentlemen, Solicitors, Land Agents, and others, that they EXECUTE every description of professional work on the most reasonable terms. Railways, roads, water-works, &c. planned, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs prepared and executed. Estates, manors, parishes, and townships, surveyed and mapped. Land, timber, buildings, &c. measured and valued. Houses surveyed, and estimates of dilapidations given. Maps, plans, &c. drawn, copied, and reduced with accuracy and despatch. 24, Guildford-street, Russell-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform their friends and the public that they have refitted up their OFFICES with every requisite for acquiring a thorough practical knowledge of the profession in all its branches, including models and instruments of every description. The COURSES are all remodelled and enlarged, embracing all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING OFFICES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For planning Gentlemen for Architects, Builders, Engineers, Surveyors, or Draughtsmen. Measurers, &c. are taught EVENING LECTURES on Architectural and Civil Engineering, Drawing and Colouring, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Levelling, &c. Terms, Three Guineas per Quarter. For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water-Colours, and Author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's park.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, flaws are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

FOREIGN SHEET-GLASS packed in cases of 200 feet, from 38s. to 42s. per case.

GLASS TILES ¼ of an inch thick, 37s. 6d. per case, containing fifty tiles.

HARTLEY'S PATENT ROUGH PLATE-GLASS, packed in boxes of 50 feet, from 18s. 6d. per box.

SASHES GLAZED with good Crown glass at 3d. per foot, cartage included.

JAMES PHILLIPS, and CO. 116, Bishopsgate-street Without.

THE PATENT CRYSTAL WINDOW, entirely save sending the use of Metal or Wood Sash Bars, by the exclusive employment of glass for the entire window. The advantages of this material consist in the perfect transmission of light, elegance of appearance, imperishability from rust or decay, and the great facility with which it may be cleaned, and the economy of labour involved, contrasted with either metal or wood. Examples of shop-fronts entirely of this construction may be seen at the London Mutual and Shawl Company's, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Abergavenny, &c.—Full particulars may be obtained from the Patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plain Flint Glass Manufacturers, Park Glass Works, Birmingham; or from Mr. MAHERLY, 10, Buckingham-street, Adelphi, London; Messrs. HALL and SONS, Bristol; or Mr. M. BROOKS, 10, Middle Abbey-street, Dublin.

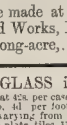
E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish. ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from ilation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron els, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in pre- ing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—



ssrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
ssrs. G. and T. WALLIS, 64, Long-acre, ...

The statues of Australia, Venus de Medici, the colossal Tritons in the gardens at Sydenham, are in Terra- a. So are the fountains at the Royal Exchange, and the roof the Alhambra Court. The Pompeian roof is of Terra-cotta and cement recently mixed. Since the execution of these works, . Blashfield has taken a patent for an improvement in the ufacture of Terra-cotta and pottery, whereby larger and more surfaces can be produced, and a higher degree of vitrification ained.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of coverage, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK——LONDON——PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place to the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy reaped by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. H. MORLEY and CO., and by the Company's Grinding Agents In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; JACK and BRABY, wholesale and retail agents, 8, Tottenham-court, New-road, and 50, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LEWORD and CO of 40, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint: it will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 6d. per cwt., casks inclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, painting, &c. 8s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 8s. per stone.

DAMP WALLS PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 120 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Lanseton Scott's Patent.)

CROWLEY, WHITE, and CROWLEY Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is not in the place of white lead, possesses equal body, at 1 perfect y unchangeable in colour.

Prices, terms, and prospectus with superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above Cement, being of uniform colour and quality (a desideratum never before attained in Portland Cement). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as P rtland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, 42, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cements; they are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT WORKS, Northfleet, and Beire lere-road, Lambeth. KNIGHT, BEVAN, and STURGE, Manufacturers. For town, country, and exportation.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian under patents, and all other Cements in use for building purposes. Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, the requisite colouring matter is sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and it may be used in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks for boilers and chimneys, Tiles, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, for the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

STONES, PAVIORS, STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GROUND ABERTHAW LIME (for Hydraulic Works), Blue Lias Cement, Cambrian Plaster, Coasts, or out of Lime for Agriculture and Gardening purposes, and Portland Cement, shipped at Cardiff, in barrels, to all parts of the world, or forwarded by railway direct out of the works, in sacks or casks, to any part of the kingdom.—JAMES BIRD and Co. Cambrian Cement Works, Cardiff.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 20, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the data duty of Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hucker, surveyor to the Duke of Bedford:—"Office of Works, Whitehall-yard, Jan. 14, 1852. —In answer to your inquiries respecting the Gutta percha tubing for rising suction, I find that the water has not affected it in the least, although it is all cut lead through, in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c. C. Hucker." N.B. the Company's illustrated Circulars contain many directions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive stings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Deep and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or slide telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids that it could be raised, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex street, Strand.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse-shoe complete, strong enough for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 5, Blackman-road. These engines have been successfully employed for years.

STEAM BOILERS of every description, Wrought-iron Girder Bridges, Gas-holders, and General Castings, Contractors', and Contractors' Iron Work, manufactured by MILLHOUSE and HUSSEY, Phœnix Works, Tyndale near Isaac-s. London Office, 78 Hatton-garden.

PARSEY'S REVOLVING STEAM-ENGINE, without overhang, dead point, or back pressure An engine may be seen at work at the Manufactory of Mr RICH, Engineer, 14, Paternoster Row, Peckham-road, near Camberwell-green, on HUDSON'S LAND, PECKHAM MOST EXTENSIVE Assortment in the Kingdom, FIFTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will find it to their advantage to visit this establishment.

PAPER-HANGINGS.—The CHEAPEST HOUSE in England for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 99, GREAT PORTLAND-STREET Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, FIFTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will find it to their advantage to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEY and CO., Paper-Stainers, beg to call the attention of the Trade to their extensive Assortment of Papers for the present season, which comprises every description of style and quality, from the most common to the richest paper that can be produced, and they are prepared to offer at very low prices. J. A. and Co. have successfully introduced the LINCRUSTA WALTON at their OXFORD-STREET, where all persons can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and Co. are the sole makers of this well-known remedy for Damp Walls.

115, Waterloo-pl., near the Obelisk, and 500, Oxford-street.

PAPER-HANGINGS.—R. HORNE, PAPER-HANGING MANUFACTURER, 41, Gracechurch-street, City, invites builders and the trade to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by the aid of powerful machinery, he is enabled to offer at the following prices, in stock quantities, for cash only, viz.:—

Stout lining paper	5d	9d Piece.
Superior ditto	6d. and 7d.	
Red-room papers, in great variety	at 8d.	
An excellent oak paper	at 8d.	
Sitting room ditto, on blended grounds	7d to 9d.	
Hall-stone marbles	9d to 1s. 6d.	
Good satin papers	1s. 6d. to 2s. 0s.	
Flock papers	2s. 0d. to 2s. 6d.	
Hand-made granites	9d. to 1s. 0d.	

Every novelty in French and English panelled decoration always on hand, also excellent imitation of fancy woods.

N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched with promptitude on receipt of a remittance to the amount of the order given.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES,—Gateshead-on-Tyne.

67, Hyde-park-street, Glasgow.
37, Dale-street, Manchester.

LICENSES GRANTED

FOR THE USE OF

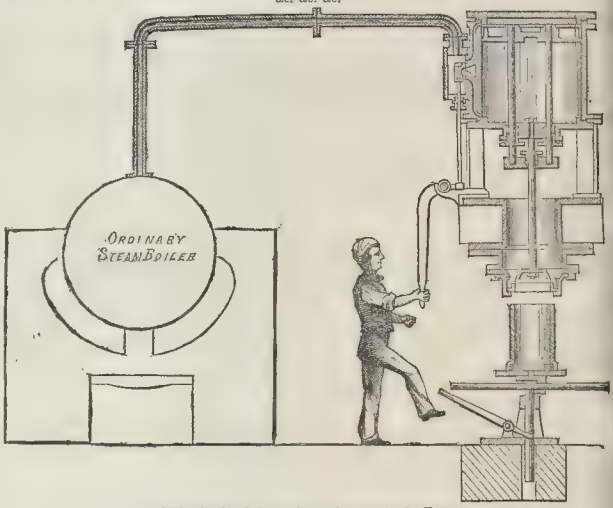
SPENCER'S PATENT;

VIZ. FOR

DIRECT-ACTION STEAM-PRESS, SOCKETING DIES,

(These Dies are used without crosses or arms);

DIES FOR HOLLOW EARTHENWARE,



(As Garden-pots, Pans, Basins, Crucibles, &c.);

Bends direct from the Machine, Stilts and Kiln for Vitrifying and Burning;

FOR MAKING

SANITARY TUBES, DRAIN-PIPES, EARTHENWARE

&c. &c. &c.

Apply for further information and terms to the Patentee,

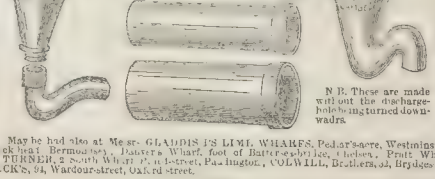
THOMAS SPENCER, PRESCOT.

N.B. Licenses are already granted to parties in London, York, Leeds, Sheffield, Newcastle, Darlington, Birmingham, Liverpool, Wrexham, Edinburgh, Glasgow, and Aberdeen, or their localities.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.



W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES BENDS, JUNCTION, TRAPS, &c. 59, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally known as to render any enumeration of them almost superfluous. The cheapness, efficiency, and durability, as universally admitted, while the rapidly increasing demand for them proves the estimate of superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assortment of Drain Pipes of every form and size, adapted to the various situations for which they are required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and of superior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin, Old-street, Bermondsey, Painters' Wharf, foot of Battersea-bridge, Chelsea, Pratt Wharf, Kingsland, Camden New Town; J. TURNER, 2 South Wharf, Paddington, COLWILL, Brothers, 93, Bridges-street, Covent Garden, and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

CLOSETS WITHOUT THE COMPLICATION OF CRANKS AND WIRES

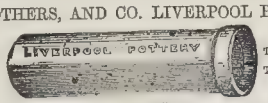
WERE FIRST INTRODUCED BY GEORGE JENNINGS IN 1848.

That the arrangement was good is proved by other Manufacturers finding it answer their purpose to advertise that they NOW manufacture Closets without Cranks and Wires.

GEORGE JENNINGS respectfully calls the attention of Architects and Engineers to his

CLOSETS, URINALS, AND LAVATORIES FIXED THROUGHOUT THE CRYSTAL PALACE.

JENNINGS'S DRAIN-PIPES.



The Patentee has made such arrangements, that in a few weeks he will be enabled to supply any quantities and sizes up to 2 feet to order.

A Sample Closet, with Stool Cock complete, packed and sent to any part, on receipt of a Post-office Order for 30s.
A Book containing Illustrations, Descriptions, and Prices of JENNINGS'S HIGH PRESSURE BIB, BALL, and STOP COCKS, SLUICE VALVES, and FIRE COCKS, URINALS, LAVATORIES, PUMPS of all kinds, FOUNTAIN JETS, GULLY TRAPS for STREETS, STABLES, or SINKS, &c. &c. can be had on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
No. 29, Great Charlotte-street, Blackfriars-road, London.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

STONE WARE PIPES, BENDS, JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES.

May also be had as follows:—

LIVERPOOL—STORES, 70, SOHO STREET, LIVERPOOL.

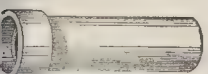
STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

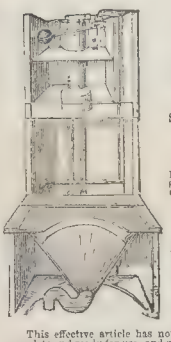


These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

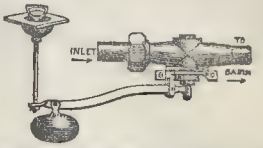
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.



GIBBS, CANNING & Co
TAMWORTH

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c. &c.
Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

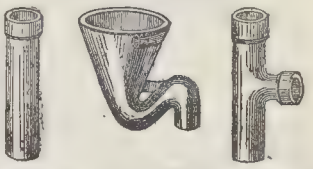
HAYES, BROUGH, and CO.

Works: Llwynenlyn, near Wrexham.
Offices: 11, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

LAMBERT'S SELF-CLOSING
LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.



J. TURNER, Pottery, 2, South Wharf,
Praed street, Paddington.

Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

TO MANUFACTURERS of GLAZED STONEWARE DRAIN-PIPES and OTHERS.—A SHARE on the whole of a valuable Business in the above line, the works situated in Northamptonshire, with railway communication, and the clay proved to be of a most superior description. The present proprietors would either retain a share with a party who could bring knowledge of the trade and a moderate capital into the concern, or would let the works on lease, with a royalty on the clay. For particulars, apply to Messrs. WILLIAM and HENRY ELSAM, Merchants, 2., Bishopsgate-street Within, London. Written applications, except from parties in the country, will not be attended to.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

REDUCTION of PRICE in UNGLAZED DRAIN PIPES.
Manufactured by CHAS. FRANCIS and SONS, NINE ELMS.

The price in future will be,

6s. 3d.	per foot for the	3	inch bore.
6s. 3d.	"	4	"
6s. 5d.	"	6	"
9s. 6d.	"	9	"
1s. 2d.	"	12	"
2s. 3d.	"	15	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.
Agent for Southampton, R. L. FLUDER, American Wharf.

MILL WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

LAMBETH STONE POTTERIES.—TO BE SOLD, a POTTERY BUSINESS, situate in High-street, Lambeth, in good working order, and offering an excellent opportunity for investment in this lucrative trade.—For particulars apply to Mr. W. J. LOAT, Church-buildings, Clapham-common.

SALES BY AUCTION.

TO ENGINEERS, IRON SHIP-BUILDERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on WEDNESDAY, JULY 12, at ELEVEN o'clock, on the PREMISES, Northfleet, Kent (unless an acceptable offer is previously made by private contract), the GREAT IRON WORKS and SHIP-BUILDING YARD, on the banks of the Thames, at Northfleet, Kent, within an hour's ride of London by the North Kent or Tilbury lines of railway. The buildings are of most substantial erection, and include spacious turnery, fitty shop, boiler makers' and smiths' shops, iron and brass founding, pattern makers' shop, store, draughtsmen's office, counting-house, large yard enclosed by folding gates; also a large plot of ground adjoining, having a depth of about 300 feet, sufficiently capacious for the erection of large vessels. Held on lease for a long term of years at a ground-rent.—To be viewed till the sale. Particulars may be had fourteen days previous to the sale, of Mr. SHARLAND, Solicitor, Gravesend; on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street.

TO ENGINEERS, IRONFOUNDERS, SHIP-BUILDERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on WEDNESDAY, JULY 12, 1854, and following day, at ELEVEN o'clock, on the PREMISES, Northfleet, Kent, by order of the MACHINERY and TOOLS of the NORTHFLEET IRON-WORKS, including several self-acting lathes, by Whitworth, Collier and Smith, Bridges; slotting and planing machine, screwing machine, nut-shaping machine, steam saw, drilling and boring machines, 20 ton overhead travelling crane, two high pressure steam-engines, with connecting-rods complete, three steam-boilers, two shearing and punching machines, 5 ft. plate bending rolls 8 feet wide, smiths' forges and tools, plate and angle iron furnaces, shaping machine, four cupolas, patent fan, two foundry cranes, twenty tons of flasks, beam rings and plates, erecting or drying-stove and air furnace, set of powerful shear legs, set of triangles, double and single purchase crab cranes, portable wharf crane, vices and benches, set of Weatworth's taps and dies, steel tools, a variety of stores, cast and shear steel, bolts and nuts, washers, felt, strong leather for packing, spring van, several trucks, fittings of pattern maker's shops, draught-men's and clerk's offices, and numerous other effects.—To be viewed (the machinery in motion) on MONDAY, the TUESDAY previous to the sale, when catalogues may be had, on the Premises, and of Messrs. FULLER and HORSEY, Billiter-street, E. adon

TO BUILDERS, COAL MERCHANTS, BRICKMAKERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, at the FARM and WHARF, adjoining Craven Lodge, Stamford-hill, on MONDAY, JULY 10, and following day, at ELEVEN, by direction of the executors of Arthur Craven, Esq. deceased in lots, without reserve, BUILDERS' STOCK, MATERIALS, and IMPLEMENTS, 20,000 new Stourbridge fire-bricks, 100,000 second-hand fire and stock bricks cleaned and stacked, 25 tons Tanfield Moor coals, 150 chaldrons breeze, 250 tons river sand, 500 tons brickmakers' sand, 1,000 yards gravel, 200 tons burrs, four new iron coal-waggons, the ironwork for twenty coke ovens, 20,000 new contest slates, 40 square stone blocks, 200 new 14-feet battens, 600 new well-seasoned fir and pine boards, 10 loads of capital English oak, ash, and elm planks and boards, park fencing 3 tons shot lead and lead pipe, stock of oils and colours 200 scaffold boards, 200 poles, ladders, crowding, navvy, and mud barrows, barrow planks, tressels, benches, two timber carriages, whim, stone truck, two mortmills, gravel washing machine, well rods, furnace doors and frames, stoves, ironmongery, 6 cwt. pick-axes, 3,000 pantiles, 300 feet York paving, a large assortment of second-hand building materials, and numerous other effects.—To be viewed with the other effects, by catalogues only see preceding advertisement).

ENGINEERS' WATERSIDE PREMISES, with first-rate frontage to the River Thames

MESSRS. FULLER and HORSEY will SELL by AUCTION, on the PREMISES, Northfleet, on WEDNESDAY, JULY 12, at ELEVEN o'clock the LEASE of those extensive and substantial PREMISES, known as the NORTHFLEET IRON WORKS, admirably situated for business, and judiciously arranged for carrying on the various branches of an engineer, founder, boilermaker, iron and wood ship builder, &c. but equally eligible for any manufacturing business. May be viewed; particulars had at Messrs. FULLER and HORSEY'S Offices, 12, Billiter-street, London; and of G. E. SHARLAND, Esq. Town-hall, Gravesend.

Extensive Sale of Railway Plant and Contractor's Stock, Five Cargoes of Timber, &c. &c. at St. Stockton-on-Tees. Important to Contractors, Timber Merchants, Builders, Joiners, &c. &c.

MR. T. W. HORNSBY begs to announce that he has been honoured with instructions from Messrs. 131, High-street, Stockton-on-Tees, 23rd June, 1854.

ROYAL HOSPITAL, GREENWICH.—Clothing Stores and Materials.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, at the STORE-YARD, Greenwich Hospital, on SATURDAY, JULY 22, at TWELVE PRECISELY, by order of the Commissioners of Greenwich Hospital, a large quantity of STORES, comprising blue woollen cloth, waistcoats, and trousers, cuttings of blue and white serge, linen and rags, coverlets, blankets, bed-ticks, linings and flannels, hats and shoes, copper and brass work, &c.; also a quantity of materials, copper boilers, and ironwork belonging to the Victualling Department.—May be viewed one day prior to the sale, and catalogues had at the Office of the Steward and Inspectors of Works, Royal Hospital, Greenwich; and of the Auctioneers, 30, Parliament-street, or Coal Exchange.

Day of Sale altered from the 5th of JULY to the 2nd of AUGUST.

NOTTING HILL.—Very valuable Plot of Building Land on the Lansdowne Estate, being the only uncovered spot in this improved vicinity, a portion of the estates of the late William Chadwick, esq.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions from the administrator to SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, AUGUST 2, at TWELVE, in one lot, a very valuable and important PLOT of BUILDING LAND, having a frontage of 275 feet to the Kensington Park-road, and 185 feet to Ladbroke-road, formerly Weller-street east. Notting-hill, highly eligible for the erection of villas and attached residences, being within a few yards of the high road to Uxbridge and Lord Holland's park, and the only uncovered piece of land in the vicinity. Separate leases may be had, if required by the purchaser, direct from the freeholder, for terms of eighty-two years at nominal ground-rents. May be viewed, and particulars had of J. ANDERSON ROSE, Esq. Solicitor, 11, Salisbury-street, Strand; at Garraway's; and of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

SALES BY AUCTION.

250 Loads of excellent Baltic Timber, lying adjoining the Thames at Richmond.

MESSRS. HUMPHREYS and WALLEN will SELL by AUCTION, adjoining the bridge at Richmond on the Middlesex side, where the goods lie, on TUESDAY, JULY 11, at TWELVE, by lots, or in one lot, for 1 or 2 years, the boat tractors (who have just completed the laying of the main supply pipes of the Southwark and Vauxhall and West Middlesex Water Companies beneath the Thames), the SCANTLING and REMANENT TIMBER, which has been used in the construction of the coffer dams and other works, comprising about 250 loads of excellent Memel, Riga, and Dantzic timber, much of it as sound as new, and the whole of it very serviceable; also, the materials of the temporary workshops, counting-house, a capital shift, a punt, &c. The timber will be arranged in lots, convenient for 1 or 2 builders and contractors. Catalogues may be had, seven days before the Sale, of the Storekeeper, on the premises; also, at the Greyhound Inn, Richmond; Star and Garter, Pulney; and of Messrs. HUMPHREYS and WALLEN, 68, Old Broad street, City.

WOLVERHAMPTON SUBSCRIPTON BATHS.—TO BE SOLD by AUCTION, by

MR. R. S. WALKER, on WEDNESDAY, the 26th day of JULY, 1854, without reserve, at the SWAN HOTEL, Wolverhampton, at SIX o'clock in the afternoon, subject to such conditions as will be then produced, Lot 1, the newly-erected and extensive BATHS, built in the Arabesque style of architecture, situate near the Bath road, and adjoining the Wolverhampton Race course, consisting of an entrance hall leading to a spacious swimming-bath, 70 feet by 30 feet, large plunging-bath, 30 feet square, three-quarters deep, 12 large, on, ten private baths, fitted with Ruffell and Finch's patent baths, with pipes for hot and cold water, and shower-baths, ladies' waiting-room, clerk's office, with suitable water-closets also a Dwelling-House for bathe-keeper, consisting of a parlour, kitchen, brewhouse, and four bed-rooms. The buildings and baths are fitted in the most complete and efficient manner, and are heated with Haden's patent apparatus; they are all furnished with ceilings, bells, towel and drying pipes, and every other convenience. The above spacious premises are in every way eligible for public or subscription baths, having been erected at a great expense, and the land, with the site of the buildings, contains 2,740 square yards or thereabouts. Lot 2, a very valuable piece of parcel of FREEHOLD BUILDING LAND, adjoining the above premises on the north side, containing 1,596 square yards or thereabouts. Further information may be had of Mr. C. E. P. SPARROW, Solicitor, Queen-street; or the Auctioneer, Red Lion-street, Wolverhampton.

TO BUILDERS, MASONS, AND OTHERS.—TO BE DISPOSED OF, a few miles from town, a GENERAL MASON'S BUSINESS, established eight years.

MR. DOUGAL is instructed to effect an immediate transfer of the above capital business, the proprietor going abroad. Rent, 12l. Price, 50l. Compact large roomy house, two yards, stock, &c. Stock worth more than the money.—For address, apply to Mr. GEO. DOUGAL, Auctioneer and Surveyor, 17, Melina-place, Westminster-road.

WEST-HILL, WIMBLEDON-PARK.—Numerous very eligible Freehold Building Sites.

MESSRS. CHINNOCK and GALSWORTHY will SELL BY AUCTION, on THURSDAY, JULY 27, at the MART, numerous PLOTS of very desirably situate FREEHOLD BUILDING GROUND, comprising a portion of the most elevated part of West-hill, near Wandsworth, and close to the beautiful avenue bounding the magnificent domain of Wimbledon-park, commanding some beautiful views of the surr unding picturesque country; the approach being by a good roads, the soil gravelly, and the situation within easy and constant access by railway, renders these sites particularly adapted for the erection of villas of a moderate class, now in great request in this improving locality, which, from the increasing and select neighbourhood forming at West-hill, bids fair to become the most favourite and leading suburb of the south side of the metropolis.—Plans and particulars may be obtained of the Auctioneers, 28, Regent-street Waterloo-place.

Important Sale of valuable Materials of the Islington Cattle-market; also of the Iron Palisades, Iron Gates of Wrought Iron Entrance Gates, 23 feet by 12, and five others; 23,300 feet of very stout excellent Wrought Iron Fencing, with gates, quantity of lead, and numerous effects to be taken down by the purchasers, by

MR. RICHARDS, on the PREMISES, on WEDNESDAY, JULY 12, and following days, at ELEVEN o'clock each day. The MATERIALS comprise upwards of One Million Stock Bricks of excellent quality, 5,000 squares of slating, 250 framed principals, and sound timbers of roofs of sheds 1,000 feet long, 180 squares of boarded and timber floors. The mantel fin. fittings of the 15 houses comprise 150 pairs of sash and frames, forty marble and other chimney-pieces, seventy six-panel and other doors, and fanges, counters, flights of stairs with mahogany handrails, recesses and other stops, Dennises, 21,000 feet of York-hire stone kerb, 9 in. by 7 in.; 200 Portland window sills, coping, York paving, pantiles, iron pumps, wash mill; 14,000 feet of oak joists and lath flooring, 6 ft. by 3 ft. 6 in. and other sashing, and a vast quantity of nearly new and excellent materials. Catalogues, 6d. each, returnable to purchasers, may be obtained five days prior to sale; of Messrs. Sollett and Ralph's Inn; at the Flower-pot, Bishopsgate-street; on the Premises; and of the Auctioneer, Totteham, Middlesex. The materials may be viewed two days prior to sale

TOLLINGTON PARK.—Valuable Freehold Building Land, estimated to produce 15l. per annum in ground-rent.

MR. LEREW will SELL by AUCTION, at the MART, on THURSDAY, JULY 13, at TWELVE, in Nineteen lots, the extremely eligible BUILDING GROUND, with sewer in and road made, most desirably situate in an elevated position, with a frontage of 323 feet to Tollington-road, Horsey-road, Holloway, near the New Church in Tufnell-park, with easy and economical access to all parts of the metropolis, and well calculated for the erection of superior genteel villa residences.—Particulars and plans may shortly be had at the inns in the neighbourhood; of J. WYLES, Esq. Solicitor, 23, Percy-street, Bedford-square; at the Mart; and of Mr. LEREW, Cardington-street, Hampstead-road

TO BUILDERS, CARPENTERS, PIANOFORTE MAKERS, AND OTHERS.

Catalogues had on the Premises; at the Office of the Solicitor to the Inland Revenue, Somerset House; the Collector's Office, Inland Revenue, Tower-hill; and of Mr. MURRELL, Auctioneer, &c. 1, Walbrook, Mansion-house.

The Valuable Materials of the Gilt-pur-strect Prison and House of Correction.

PULLEN and SON have the honour to announce that they are favoured with instructions to PREPARE for SALE by AUCTION, on the PREMISES, on TUESDAY, JULY 25, and succeeding days, at TWELVE, in Lots, the whole of the extremely valuable MATERIALS of the GILTSPUR STREET COMPTER and HOUSE of CORRECTION. The Giltspur-street Prison stands upon nearly an acre of ground, and consists of lofty walls, wards, cells, and dormitories for 500 prisoners, besides the governor's house, the infirmary, the chapel, and the necessary accommodation for the numerous officers of the establishment. Detailed particulars of this enormous mass of property will appear in a few days. The following is a short summary of it:—4,000,000 of the finest stock bricks, 12,000 feet of sheet-copper on the roofs, 25 tons of lead in flats, gutters, tanks, and pipes, prime oak and fir timber of large and useful scantlings, glazed sashes, modern doors, marble chimney-pieces, and all the excellent interior fittings of the governor's house and officers' departments, 893 squares of superior floor-boards, 25,000 feet of York paving and landings, the capital Portland stone flats, with corner quoins, and strenuous, and 1,500 feet run of coping, 10 stone staircases, the pews, pulpit, and fittings of the chapel, all the fittings-up of the numerous cells, with their strongly-barred windows, stone floors, and iron doors, with locks and bolts of a peculiar construction, massive iron railed gates, guards, and fences, expensive hot water apparatus, &c. &c. costly drying apparatus, with machinery complete, by Cooper, two eight iron steam boilers and fittings of the kitchen, coppers, stoves, ranges, cisterns, pumps, baths, 25 fixtures, and a large variety of materials, fixtures, and fittings-up of a superior description, and readily convertible for building purposes.—May be viewed on Saturday and Monday previous; Catalogues had at the Auction Offices, Guildhall, and of PULLEN and SON, 90, Fore-street, Cripplegate.

BOW To Contractors, Builders, Building Material Dealers, and Others.—Excellent Surplus Materials

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, Heckfield place, Devonshire-road, near Bow church and the Bow Station, on TUESDAY, JULY 11, at TWELVE, excellent surplus BUILDING MATERIALS, taken down and removed from one of the large railway stations, comprising about 200 glazed sashes, glazed and panelled partitions, about 70 doors, various, shop fronts and shutters, marble and other chimney-pieces, stoves, ranges, iron rail and gates, stacks of useful wood, and various useful materials.—Catalogues had of PULLEN and SON, 90, Fore-street, Cripplegate.

TO PARISH and RAILWAY AUTHORITIES and OTHERS. Massive Four-light Lamp on Granite Pedestal

W. AND C. PUGH are directed by the Commissioners of Pavements for Southwark, to SELL by AUCTION, without reserve, at the RICHARD HOUSE HOTEL, London-bridge, on MONDAY, JULY 10th, 1854, at TWELVE o'clock, in consequence of the erection of the Wellington Clock Tower, the splendid FOUR-LIGHT LAMP now standing in the Southwark end of London-bridge, erected, at a large outlay, in 1810, from the munificent design of an eminent architect. The total elevation is 18 feet—the granite pedestal 5 feet 6 inches high by 4 feet 10 inches square. The scroll arms extend 5 feet each side, exclusive of the antenna. Conditions of sale may be had Pugh and Wing, Esqs. Solicitors, 31, Blackman-street, at the Bridge House Hotel; and at the Offices of the Auctioneers, 8, Blackman-street, Southwark.

7,500 Pieces of Paperhangings, and 40 Veins Marble Chimney-pieces ready for fixing

MR. BRAY, Jun. will SELL at his ROOMS, 259, High Holborn, on WEDNESDAY, the 12th day of JULY, at TWELVE, upwards of 7,500 pieces of PAPERHANGINGS, of modern designs, suitable for the drawing and dining rooms, parlours, second-story apartments, hall, and staircases.—May be viewed, and catalogues had.

TO INDIA-RUBBER MANUFACTURERS, WATERPROOFERS, AND OTHERS

A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet, TO BE SOLD, or let on lease for a term of years, and possession may be given immediately, consisting of the whole of the premises recently erected by the parties retiring from that portion of the business, five stories high, with steam-engine and shafting force, and all the machinery required for cutting, masticating, and cutting India-rubber into sheets, threads, &c. the whole now in full working order. Term forty-two years; ground-rent, 25l. per annum.—Apply for further particulars at Mr. LAKE'S only Offices, 65, New Bond-street, London.

EXTENSIVE PREMISES required to be RENT, or PURCHASE the FREEHOLD. They must situate within ten minutes' walk east or south of the Royal Exchange, and contain a superficial area of about 4,000 square feet. Any old inn with booking offices, large residence with yard and premises adjoining, containing about the above area, and capable of conversion, or where the site can be cleared, will meet the case. Possession of the greater part would be required in not less than three years.—Full particulars to be addressed to Mr. ELLIS, Surveyor and Estate Agent, 130, Minories, City.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX Brothers and WYMAN, 74 & 75, Great Queen street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 8, 1854.

ADVERTISEMENTS.

METROPOLITAN BUILDINGS ACT.—NOTICE.—An EXAMINATION of Persons desirous to obtain a Certificate of Qualification for the Office of District Surveyor will take place on MONDAY, the 31st day of JULY instant.

Persons desirous to be examined must apply on or before the 20th inst. and the application must be accompanied by a preliminary statement proceeding in the course of examination prescribed in the rules for that purpose, copies of which may be had at this Office; or at Mr. WEALE'S Architectural Bookseller, 59, High Holborn.

ARTHUR AUSTIN,
Registrar of Metropolitan Buildings.

Office of Metropolitan Buildings, 6, Adelphi-terrace, Strand, 13th July, 1854.

NOTICE is hereby given, that a GENERAL QUARTERLY MEETING of Members of the INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS will take place on WEDNESDAY EVENING next, at the BAY-TREE TAVERN, St. Swithin's lane, for the purpose of transacting the usual quarterly business.

W. ALLARD, Secretary.

PARIS UNIVERSAL EXHIBITION of 1855.—Notice is hereby given, that all DEMANDS for SPACE should be SENT IN without delay to the undersigned Exhibitors IMMEDIATELY, or at LATEST on 1st AUGUST.—By order,

H. C. OWEN, Capt. R.E.

Marlborough House, Pall-mall, London, 13th July, 1854.

CONTRACTS.

TAR CONTRACT.—The Directors of the Western (Cannel) Gaslight Company are prepared to receive, on or before WEDNESDAY, the 26th instant, TENDERS for the whole or part of the TAR which may be produced at the Company's Works for the next seven years, or THREE YEARS from the 5th of OCTOBER next. This tar is superior in quality to that made from coals or coal. The Tenders to be endorsed "Tenders for Tar." The directors do not bind themselves to accept the highest Tender.

By order,
S. BARBER, Secretary.

Offices, 28, Argyle-street, Regent-street, July 8, 1854.

TO BUILDERS.

THE GUARDIANS of the HOLBORN UNION will meet on WEDNESDAY, the 19th JULY instant, to receive TENDERS for WORKS proposed to be done at the WORKHOUSE situate in Little Gray's-inn lane, Holborn. Plans and specifications of the works, and a form of the Contract to be entered into, may be seen at the Office of the Architect, Mr PERRY, of the Charterhouse.—Further particulars may be obtained from Mr. PERRY, or from the Clerk, at No 21, Ely-place, Holborn. Sealed Tenders, marked outside "Tender for Building Works," must be delivered to the Clerk on or before TUESDAY, the 25th instant. Dated 13th July, 1854.

EDWARD WALLWYN JAMES, Clerk.

SOUTHAMPTON LOCAL BOARD of HEALTH.—To CONTRACTORS, BUILDERS, and OTHERS. Notice is hereby given that the Special Works Committee of the Southampton Local Board of Health are prepared to receive TENDERS from any person or persons willing to enter into separate contracts for executing the undermentioned Works, viz.—First. The construction of a Filter-bed in the Mansbridge-meadow. Second. The erecting and completely finishing, fit for occupation, a Cottage, &c. in the Mansbridge-meadow. Both the above works must be in accordance with separate plans and specifications to be seen at my Office in Southampton. Separate printed specifications can be obtained on application to me upon payment of 2s. for each copy. Sealed Tenders must be delivered to me at my Office on or before TWELVE o'clock at noon of WEDNESDAY, the 19th instant. No pledge is given to accept the lowest or any other Tender.—By order of the Special Works Committee,

CHARLES E. DEACON,
Clerk to the Local Board of Health.

Public Health Office, Southampton, July 6th, 1854.

TO BUILDERS.

PERSONS desirous to TENDER for certain ADDITIONS and ALTERATIONS to be made to the REGENT-STREET BRANCH of the UNION BANK of LONDON, Argyle-place, are informed that they may inspect the drawings and specifications at the Office of Mr. JAMES THOMSON, Architect, 57, Devonshire-street, Portland-place; and must deliver their estimates on SATURDAY, JULY 22nd, at TWELVE o'clock. Quantities will be furnished on the usual terms, but the Directors do not pledge themselves to accept the lowest Tender.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that Sealed Tenders will be received at the Ordnance Office, Pall-mall, London, on or before the 25th day of JULY, 1854, from persons desirous of Contracting with the Honourable Board of Ordnance for the undermentioned Works and Repairs at the WESTERN HEIGHTS BARRACKS, Dover:

SERVICE No. 1.—Enlarging the Ante room and constructing a Pitchery in rear of the Mess Establishment.

SERVICE No. 2.—Renewing Joists and Boarded Floors to Four of the Soldiers' Rooms, and New Steps and Risers to Nos. 3 and 7 Houses.

SERVICE No. 3.—Constructing Two Regimental Stores and a Sergeants' Mess room under the Ground Floor of the Upper Range of Soldiers' Barracks.

Plans and specifications of the Works may be seen, and forms of Tender obtained, at the ROYAL ENGINEER OFFICE Dover, between the hours of TEN and FOUR o'clock, from the 8th to the 24th JULY, 1854, Sunday excepted.

The Party whose Tender may be accepted for the Works, will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under penalty of 50l. for the due performance of the Contract.

Tenders for the above Works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London," and endorsed, "Tender for Works at the Western Heights Barracks, Dover."

N B The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 3rd, 1854.

ST. GILES-IN-THE FIELDS and ST. GEORGE, BLOOMSBURY.—To SCAVENGERS and CONTRACTORS.—Notice is hereby given, that the Committee for Paving, Cleansing and Lighting these Parishes, will meet at the Vestry room of St. Giles in the Fields, on THURSDAY, the 27th day of JULY instant, at TEN o'clock in the forenoon precisely, to receive PROPOSALS from such person or persons as may be willing to CONTRACT for TAKING AWAY the DUST and ASHES, &c. from the houses and buildings of the inhabitants of the several quarters, and the said other places in the parishes (Lincoln's-inn fields and the Rolls excepted), from and on the 1st day of the ensuing Michaelmas next, until the 24th day of JUNE, 1855. Persons sending Tenders are required to attend at the Vestry room at the time of the meeting. No Tender will be received after TEN o'clock of the morning of the 27th day of JULY instant. The Contractor or contractors not to let or assign his or their contract work, or works, to be done, or any part or parts thereof respectively, without the special consent of the Committee. Security to the satisfaction of the Committee will be required for the performance of the Contract, and the names, places of abode, &c. of the persons to be offered as sureties, to be met with the proposal sealed. A draft of the Contract may be seen at the Clerk's Office, 21, Herbert-street, Bloomsbury-square. The Committee will not bind themselves to accept the lowest Tender, and will defray the charge of the contract and bond. Payments to be made quarterly.—By order of the Committee,

ROBERT FINNIS, Clerk.

6th July, 1854.

SOUTH WALES MINERAL RAILWAY.—Parishes of Baglan and Michaelstone-super-Avon, near Neath.—To Contractors.—The Directors of the SOUTH WALES MINERAL RAILWAY will LET by TENDER the following works, viz.: A TUNNEL, 11 yards in length, with the formation of the railway at both ends for the tunnel, extending one mile and thirty chains in total length. Plans and specifications may be seen at the Office of J. K. BRUNEL, Esq. Engineer, 18, Duke-street, Westminster. Sealed Tenders to be delivered on WEDNESDAY, the 2nd day of AUGUST next, by ELEVEN o'clock in the forenoon; and persons tendering to be in attendance at the Craven Hotel, Strand, London. The Directors do not bind themselves to accept the lowest Tender. By order,

ROBERT PARSONS, Secretary.

6 July, 1854.

TO BUILDERS.

ANY Persons desirous of CONTRACTING for the BUILDING of new SCHOOLS at Llandilo, Carmarthenshire, are required to send in Tenders for the same, addressed to Mr. C. BISHOP, Llandovery, on or before the 5th day of AUGUST next. The Tenders are to specify the amount required for workmanship, exclusive of the materials, and also the amount for workmanship and all materials. The plans and specification may be seen, on application to Mr. HENRY OWEN, Crown Inn, Llandilo. Llandilo, 8th July, 1854.

TO BUILDERS.

PERSONS desirous of sending in TENDERS for the ERECTION of CHAPELS, LODGE, ENTRANCE-GATES, and PALISADING for the New Burial Ground of the Parish of Holbeach, in the county of Lincoln, may see the plans and specifications, and obtain the quantities at the Offices of Messrs PRITCHETT and SONS, Architects, Lendal, York, and at my Office in Holbeach, on the morning of MONDAY, the 17th of JULY instant, until SATURDAY, the 22nd instant. The Tenders are to be delivered at my Office before FOUR o'clock in the afternoon of the last-mentioned day, sealed and directed to me, and endorsed "Tenders for Cemetery Chapels, &c."

By order of the Burial Board,
E. G. AYLIFF, Clerk.

Holbeach, 8th July, 1854.

TO BUILDERS.

THE SUNDERLAND and SOUTH SHIELDS WATER COMPANY are desirous to receive TENDERS for the ERECTION of an ENGINE-HOUSE, BOILER HOUSE, CHIMNEY, TWO COTTAGES, COOLING POND, and other Works. Drawings and specifications may be seen at the office of the Company, in Fawcett-street, Sunderland on and after WEDNESDAY, the 5th day of JULY next, where bills of quantities may be obtained at a charge of One Guinea each. Tenders are to be sent in on or before Noon, on FRIDAY, the 28th day of JULY next, to the directors do not pledge themselves to accept the lowest or any Tender.

By order, WILLIAM SAWHELL, Secretary.

7, Fawcett-street, Sunderland, June 30, 1854.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will receive at the Court House, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of JULY, instant, at ELEVEN o'clock in the forenoon, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, in different parts of the Parishes of Paddington, Kensington, Chelsea, and Hammersmith, and places adjacent, in the county of Middlesex, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE A.M. and FOUR P.M. until the 24th inst. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

1, Greek-street, Soho-square,
Dated this 12th day of July, 1854.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated this 6th day of July, 1854.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Raneleigh.
Right Hon. Sir C. Christopher, M.P.
Rt. Hon. Col. Lowther, M.P.
J. C. Cobbold, Esq. M.P.

TO ROAD CONTRACTORS.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the ST MARGARET'S ESTATE, Twickenham, Middlesex. Contracts may be entered into, may be seen at the Office of Mr. Surveyor, Mr. GEORGE MORGAN, on and after THURSDAY, JULY 9th, between the hours of TWO and FIVE P.M. Tenders are to be delivered on or before TWELVE o'clock on FRIDAY, JULY 21st, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. St. Margaret's Estate." The executive committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk street, Strand, June 30th, 1854.

NOTICE to BUILDERS.—STAPLETON CHURCH, GLOUCESTERSHIRE.—Builders are hereby invited to submit TENDERS for TAKING DOWN the TOWER and PORCH of the present church, and for BUILDING on the same site a NEW CHURCH, according to plans and specifications prepared by Mr. NORTON, of 24, old Bond-street, London. The Plans and specifications will be open at the Vestry room till Church, where they may be seen and obtained on and after MONDAY, the 17th inst. between the hours of NINE and FIVE and not elsewhere. Tenders are to be addressed "Tender for Rebuilding Stapleton Church," to be sent to Mr. NORTON, at the above address, or on or before the 24th inst.

OXFORD CITY WATERWORKS.—CONTRACT for PIPES.—WANTED, about 1,100 Yards of 15-inch, and about 700 Yards of 12-inch Cast-iron Socket pipes; also, about Three Tons of Items, Branches, &c. Persons desirous of CONTRACTING for the same may obtain particulars by applying to Mr. J. JONES, Engineer, City Waterworks, Oxford. Terms, and "Tender for Pipes," to be delivered at the Waterworks Office, Town-hall-yard, on or before the 7th day of AUGUST next, at TEN o'clock in the forenoon.

OXFORD CITY WATERWORKS.—CONTRACT for PUMPING-ENGINES.—WANTED, TWO 40 horse-power STEAM-ENGINES, with Pumps complete. Persons desirous of CONTRACTING for the same may obtain particulars by applying to Mr. J. JONES, Engineer, City Waterworks, Oxford. Tenders, endorsed, "Tender for Engines," to be delivered at the Waterworks Office, Town-hall-yard, on or before the 7th day of AUGUST next, at TEN o'clock in the forenoon.

TO BUILDERS.

TO BE FINISHED by CONTRACT, according to specification, two second-rate semi-detached VILLAS in Bayswater, now in carcase. To see the specification and for further particulars, apply to Mr. MOORE, Architect, 4, Queen-terrace, Primrose-hill, Regent's park.

[For remainder of Contracts see next page.

CONTRACTS.

LOCAL BOARD of HEALTH for the BOROUGH of BRADFORD.—To SURVEYORS and OTHERS. WANTED, by the Board of Health, for this Borough, a competent person to act as CHIEF CLERK and ASSISTANT to the Surveyor. He must be capable of taking levels, and must be a neat and experienced draughtsman. A person having had experience of the method of conducting business in the surveyor's department, under a Board of Health, and possessing a knowledge of the most approved methods of "earth" works, will be preferred. Salary, £200 per annum. Applications may be forwarded to Mr. F. W. SHAW, Borough Surveyor, Bradford, stating age and previous occupation, and enclosing testimonials of character and competency, on or before the 28th inst.

By order,
W. H. HUDSON, Town Clerk.
Town Clerk's Office, Bradford, July 4, 1854.

TO BUILDERS AND BRICKMAKERS.

TENDERS will be received for the PURCHASE and REMOVAL of BRICKEARTH, in large or small quantities from a well-situated freehold field, near Bayswater.—Address to S. C. 13, Delamere-street, West bourne-terrace.

TO BUILDERS.

PERSONS desirous to CONTRACT for BUILDING SCHOOLS, with Dwelling-house for master and mistress, at Marchwood, near Southampton, may see the plans and specification at the office of Mr. GEORGE GUILLAUME, Architect, 81, Marlborough-chambers, Southampton. The Tenders to be sent in on or before FRIDAY, the 21st instant. The lowest Tender will not necessarily be accepted. Quantities supplied.

TO IRONFOUNDERS, BUILDERS, AND OTHERS.

COKELY-BRIDGE, BINFIELD, Berks.—Persons desirous of CONTRACTING for RE-BUILDING this BRIDGE may see the plans and specification, at my Office, No. 21, Cow-street, Reading, after FRIDAY next, between the hours of TEN and FOUR. Tenders to be sent to me on or before 7 THURSDAY, JULY 27. The lowest Tender will not necessarily be accepted. By order of the Committee.

J. B. CLACY, Berks County Surveyor.

Reading, July 7, 1854.

ENGLISHMAN'S FREEHOLD LAND SOCIETY.—TENDERS for ROADS, to ROAD CONTRACTORS and OTHERS.—The Executive Committee are prepared to receive TENDERS for excavating the ROADS and SURFACE DRAINAGE on the Crystal Palace Park Estate, Beulah Spa, Norwood. The drawings and specifications for inspection at the offices of the Society, 69, Coleman-street, City. The Tenders are to be delivered at or before FOUR o'clock on MONDAY, the 24th inst. addressed to the Secretary, and endorsed "Tenders for Roads, Crystal Palace Park Estate." The Executive Committee do not pledge themselves to accept the lowest or any Tender. Copies of the drawings and specifications can be obtained

By order, GEORGE ASKE, Secretary.

69, Coleman-street, London, 7th July, 1854.

TO TIMBER MERCHANTS, BUILDERS, PLASTERERS, &c.

MR. JOHN RICE, 79, Tithebarn-street, Liverpool, has ON SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general.—Price and terms on application.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 3,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 4, 1854:—

"An important feature in the con tract for the maintenance of the Permanent Way is that the contractors are bound to reduce their charges 2d. per ton per annum, wherever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MACE, C.E., the Manager, or Mr. WILLIAM HOWDEN, the Secretary, 28, Great George-street, Westminster.

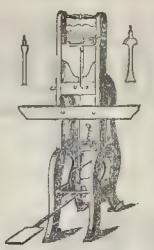
NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of the above Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS. This patent has received the most marked approbation of some of the most eminent engineers of the day, as the most effective, economical and perfect joint in use at the present time. The saving of 2 tons each mile, as well as of its application to a single line of railway, is of great importance, as it enables the ordinary traffic during the time that it is being laid down. The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is undeniable; and whoever adopted must very considerably decrease working expenses. To railway companies having old and bad roads, the immediate profitable advantages to be reaped from this joint must be very great, as it renders perfectly safe and serviceable for many years, but, at the same time, trains more efficient as well as the old and broken chairs. Railway shareholders, all of the highest value, as the joints of the rails become more and more close and economical in practice. Every information will be given, and models forwarded for inspection, on application to the Manager, at the Offices of the Company, Wolverhampton.

FRENCH POLISHING.—T. CHOWLES, French Polisher, &c. Warren-mews, Fitzroy-square. Builders' work estimated for and done at the lowest terms. Houses furnished out to let for and done in the country orders executed with despatch. Orders by post punctually attended to.

PUG-MILL.—WANTED immediately, a good second-hand PUG-MILL, complete.—Letters, stating price, addressed to J. H., care of Mr. Thomas Fowler, Painter and Glazier, High-street, Stratford, Essex.

THE PHŒNIX PERMANENT BUILDING and INVESTMENT SOCIETY established July, 1851. Office 30a, Moorgate-street.

A PUBLIC MEETING to explain the principles of this Society and to enrol members will be held on WEDNESDAY, JULY 19, at ANDERTON'S HALL, Fleet-street, at SEVEN o'clock in the Evening. Shares, £2 each. Subscriptions, 5s. 1d. per week per share for fifteen years.



Members advance for fifteen years or fixed periods of six, eight, ten, twelve, or fourteen years, at 6 per cent. The Society is established upon equitable principles. The rules are approved by an actuary. Facilities are given to the purchase of freehold, and in case of necessity subscriptions may be temporarily suspended.

HENRY SMITH, Secretary.

PATENT CAST IRON SINKS, with TRAP complete, of the following sizes:—2 feet, 6s. 6d. each; 3 feet 6 inch, 7s. 6d. each; 4 feet, 8s. 6d. each. Also, Patent Flat Gutters, more or less broken, to be sold considerably below their usual price.—At J. JONES'S Yard, Bankside, Southwark.

FOR WATERING GARDENS, DISTRICTS, &c.—THE LIQUID MANURE and JAMES LYNE HANCOCK'S VULCANIZED INDIA RUBBER TUBING is now manufactured of greater strength, and is of greater durability than any other description of hose. Having been manufactured to resist great pressure, suitable for attaching to the mains of water companies, for conveying waters pipes, or hich, &c. WATERING HOSE sold up to 6 inches bore. Jumbos, stone-cocks, rose, and 3 complete Yule sizes and patterns of suction pipes for pumps any length or age, to order. HOSE for washing, for brewers, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM, WATER JOINTS, &c. VULCANIZED RUBBER in SHEETS and any SIZE and THICKNESS. Solid vulcanized India rubber rings, and for the joints of glass tubes, gauges, frames, &c. Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

KIMBERLEY'S Patent Mortising Machine, £12 each.
Kimberley's Patent Flooring Gramps, 8s. and 9s. each.
Kimberley's Patent Window Stays and Door Springs.
Kimberley's Patent Gas Stoves, Ovens, and Ranges.
Kimberley's Registered Fancy Burns, and Shakspearian Brass Foundry.
Thousands of all are now in daily use.

These well established Articles to be had from ROBINSON, LANGTON, and CO., 7, Talbot-court, Gracechurch-street, London; or from the Patentee, Birmingham; or to be seen at, &c.

Books of testimonials and references to any extent through out the United Kingdom can be given.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees, JOWIS, JAMES, and CO., 36, Watling-street, City, and see in action this very small, powerful, and expeditious machine, which is the only one yet brought out, for performing these three branches of work in one machine; and as it is self-feeding, it does not require any skill, more than like the older inventions introduced. It can either be worked by a boy, or may be steam power.

P.S. Steam Engines and Machinery contracted for.

IRON ROOFS, BRIDGES, HOUSES, and CAST-IRON WORK, of every description, supplied and manufactured by
JOHN WALKER, Mill-wall, Poplar.
Offices, Ard-street West, London-bridge, late 61, Gracechurch-street.
N.B. Builders and Others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR-GARDEN LEAD WORKS, SOUTHWARK.
Sole Manufacturers of Bellstock's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

NAILS and IRONMONGERY, from BIRMINGHAM direct to Builders, Contractors, and others.—Supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO., having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles; for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co., after the model of the fences of this material in the Crystal Palace and Phœnix Park, Dublin, combines the property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES—Gateshead-on-Tyne
1, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas-works erected complete). And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Ware-houses, &c. Also executed on Lee's most reasonable terms. Patent Tip-up Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

THE SMOKE-CONSUMING STOVE invented by Dr. ARNOTT and exhibited by him at the Society of Arts on Wednesday, MAY the 17th, insures perfect combustion, economises fuel, improves ventilation, and requires much less attention than the stoves in general use, which manufacturing by B. and E. BAILEY, 271 and 272, Holborn, who are prepared to supply new, or adapt old stoves to the principle.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Commercial-wharf, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Plates, Bolts and Nuts, Keys and Tie, Bars, Columns, Girders, Screw Pipes, Rain-water Pipes, Gutters, Boiling and Rivetting Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

SAW-MILL MANUFACTORY, Chelsea, Loudon.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines, several of those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw mills for exportation, or otherwise.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron Railway Bars, Forge and Engine STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office, No. 7, Nicholas-lane, London.

CUNDY'S PATENT PURE WARM AIR STOVES.—The only pedestal stove which gained a Prize Medal, class 27, at the Great Exhibition, especially adapted for warming halls and corridors, churches, chapels, schools, entrance-halls, and libraries.—Can be purchased at the Manufactory of CUTLER and SONS, Ironfounders, &c., 19, Great Queen-street, Long-acre, where a large stock is always ready for immediate delivery.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker street, Portman-square.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of Ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs,
3d. per inch, and upwards.
Register Stoves, 5id. 6d., 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 2l. 5s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 3os. each.
3-feet self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.

Specimens also at the Crystal Palace—Hardware Department.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process in the casting, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in tune, and of less cost than has heretofore been supplied.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, ready or in peals.
TUNED BY MACHINERY.
Stocked and wheels ready for hanging. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clips, cast, and pegged on a new system, which gives a superior tone and facility for ringing.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and feeder department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and Co., opposite the Monument, London-bridge. Established A.D. 1700.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELL and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO., 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for counters, pews, railways, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and self-acting spring hinges, and superior cast fastenings at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

STEVENS AND SON,

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc: it therefore combines the Softness of Zinc with the Durability of Lead. The Lead side (the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 3 feet 8 inches.

No. 11 Gauge weighs about	18 oz.	per foot super.	
No. 12	"	"	20 oz. do. do.
No. 13	"	"	23 oz. do. do.
No. 14	"	"	26 oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s8. 6d.

Best fine Cut Clasp and Rose { 18s. 6d. | 18s. 6d. | 17s. 6d. | 17s. | 16s. 6d.
{ 14 | 13 | 9 | 2½ | and 3 inch.

Sash Weights. Air Bricks, 3s per doz. Hoopiron for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross. Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 2½d. per inch. Register Stoves from 5d. per inch.

Improved Self-acting Ranges with oven and boiler { 26s | 32 | 34 | 36 inch.
{ 28s. | 30s. | 32s. | 34s. each.

Best Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 | 38 | 40 inch.
{ 56s. | 62s. | 69s. each.

An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming Ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

TO ARCHITECTS AND BUILDERS.

CHUBB'S WROUGHT-IRON and FIRE-PROOF DOORS and FRAMES, for strong Rooms. A large stock of the above of all sizes, made in the best manner, and of first-rate materials, fitted with CHUBB'S PATENT DETECTOR LOCKS, throwing from two to twenty bolts, constantly on sale, at very moderate prices. FIRE PROOF SAFES of every size, and Patent Detector Locks and Latches for all purposes.—C. C. CHUBB and SON, sole Manufacturers, 57, St. Paul's Churchyard, London.

STEPHENSON and PEILL, 61, Gracechurch-street, London; and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but effective method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting spindled Door Furniture.
Lists on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. 20,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety means, fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carried out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals manufactories, clubs, houses of any size, studies, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 55, King William street, City.

NEW HOUSES OF PARLIAMENT.—DEFRIES' GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all purposes, from 1l. DEFRIES's celebrated DRY GAS METERS (sparks of safety) in use.—See testimonies at the Office, 145, Regent street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KINGS-ROAD CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large

buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Nooseless Box Shackles and Striking Plates, Fire proof Safes, Deed and Cash-boxes, Copying and Lever Presses. Descriptions and lists of prices may be had at the Depôt, 55, Strand, gratis.

STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Furniture, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, 2s. 6d. each.
J. H. BOOBBYER late STURCH and BOOBBYER, established nearly 200 years, for the supply of Goods from the best Manufactories, at the least price.
14, Stanhope-street, Clare-market, London.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Conochie's Registered Water-closet." This Water-closet is the only simple and effectual one introduced for household purposes and for having all the usual screwed work, &c. From its construction it is capable of external leakage is prevented by the use of the valve never being used on any branch, or the closet basin itself, at the Manufactory, as above.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture made. COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

FIRE—ROBBERY—VIOLENCE—PILLAGE—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the strongest safeguards in the world against.

EXTENSIVE FIRE IN GLASGOW
ON THE 23RD INSTANT.

Gentlemen, At the second fire that has occurred yesterday, by which my counting-house was destroyed, I took with me from it a set of books and papers of importance, which were locked up in one of your Safes. The whole of the contents were found perfectly safe at the same time. You will please to inform me immediately on the receipt of this letter what steps are necessary for me to take, being thoroughly satisfied of their safety, after the test I have just seen.
I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.
37, Union-street, Glasgow, Feb. 26, 1851.
MILNER'S PHŒNIX SAFE WORKS, Liverpool;
London Depôt, 47a, Moorgate-street, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO, Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1853.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

J. FARRELL, Secretary

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas-tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and is a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and Co.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other Buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

PATENT and BRITISH PLATE GLASS

JAMES HETLEY and CO. beg to inform Architects Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, forward estimates for any description of Glass now manufactured. Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London

FOREIGN SHEET-GLASS packed in cases of 200 feet, from 38s. to 42s. per case.

GLASS TILES ¼ of an inch thick, 37s. 6d. per case, containing fifty tiles.

HARTLEY'S PATENT ROUGH PLATE-GLASS, packed in boxes of 50 feet, from 10s. 6d. per box

SASHES GLAZED with good Crown glass at 3d. per foot, cartage included.

JAMES PHILLIPS, and CO. 116, Bishopsgate Street Without.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s. per case; 4ths, ditto ditto, 34s. Also 16oz. ground ditto ditto, 4d. per foot; crown and 16oz. sheet squares, in lots of not fewer, varying from 14 by 10 upwards, 2d. per foot; 1-inch rough British plate tiles, 21s. per doz. Also crown and sheet glass in crates; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent-street, and at his Steam-works, 135, Old street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons). Sash, Door, and Staircase Manufacturer, with well seasoned materials and superior workmanship, at the lowest possible prices. Glazed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

LEONARD SUGDEN, Manufacturer of Doors, Sashes, and Frames, and Joiner to the Trade, 59, Grange-road, Bermondsey, respectfully invites Builders and the Trade in general to an inspection of his Stock of Goods, from which they can always be supplied with every kind of Joiners' work, which for superiority of workmanship, material, and low prices, cannot be equalled by any house in London.—P.S. A full list of prices on application.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 45, OXFORD-STREET, LONDON, conducted in connexion with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas, of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

FOREIGN WINDOW-GLASS.—Third quality, size from 33 by 28 to 42 by 32 inches, averaging 16oz. single cases, 30s. two and upwards, 28s.; fourth quality, 32s. single case, two and upwards, 31s.; Ground, 3½d. per foot. The above is imported direct from the best manufacturers, by WILLIAM HICKSON, 46, Long-acre, and is of first-rate quality. Terms, cash.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 28s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,.....

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton, Manufacturer of every description of inside and outside BLINDS, conservatory Blinds, outside shop-blinds, horizontal blinds and awning blinds executed on the most approved principles lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 101, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 8d.; best dittoon spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impaired when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 116, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam Smoke, Dust, and Heat Testimonials and other information forwarded on receipt of a three stamps. Letters, by Messrs. R. ANDERSON and CO. Timber Hall Factory to CHARLES WATSON, King Cross-lane, Halifax, York shire, who is the patentee and sole maker.

MOORE'S PATENT LEVER VENTILATOR and PATENT RESPIRATOR, Sekford Works, St. James's-walk, Clerkenwell, London, and the Furniture Court, Crystal Palace, Sydenham.

SMOKE ACT.—WELSH COALS (of the finest quality), burning free from smoke, are recommended to the notice of Consumers generally, being well adapted to meet the requirements of the Act for the Prevention of Smoke. This Coal will be also found very durable and of intense heat.—Supplied in large or small quantities by E. and W. STURGE, Bridge-wharf, City-road.

MARYLEBONE ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES.—Incorporated by Royal Charter limiting the liability of the shareholders to the amount of their respective shares.
Capital, 100,000l. in 4,000 shares of 25l. each.

DIRECTORS.
Chairman—Joseph Grote, esq.

R. J. Bax-haw, esq. | S. H. Harlowe, esq.
F. Bridgman, esq. | Charles Heberden, esq.
R. F. Broughton, esq. | Mr. George Pelaw 1.
Sir E. N. Buxton, bart. | Lord Dudley C Stuart, M.P.
John Cunliffe esq | F. Spencer Smith, esq.
Frederick George, esq. | Josh. Wm. Thrupp, esq.
W. G. Habershon, esq.

HONORARY ARCHITECT.—W. G. Habershon, esq
AUDITORS.—John O. Hanson, esq; Thomas Hunt, esq.
BANKERS.—Sir Samuel Scott, bart. and Co.
SECRETARY.—Mr. Charles Rosser Stokes.

The object of this Association is to take on lease or purchase such property in the parish of St. Marylebone as can be obtained, with the view of providing for the industrious classes, well drained, ventilated, and cleanly habitations at as low a rate as shall be remunerative; and it is confidently expected that this beneficial object can be carried out, and a fair rate of interest returned to the shareholders on the capital invested.

Shares to an amount exceeding 12,000l. have been already subscribed for, and the first call of 2l. per share is paid up.

Applications for shares may be made to the Secretary, 28, Dorset-street, Portman-square, where prospectuses, forms of application, and every information relative to the Association can be obtained, and the list of shareholders inspected.

ON HIRE.—STEAM DREDGER.—TO BE LET, by the month or for a fixed period, a twelve-horse power STEAM DREDGER, recently new fitted out: she will lift a fifty-ton barge per hour, and make 8 feet water; loads either at high or low water. She may be now seen at work in the Ave cut, at Limehouse, and examined on application at Brunswick Dock.—For terms and particulars apply to the undersigned, NATHANIEL BEARDMORE, 30, Great George-street, Westminster.

LEEDS TERRA-COTTA and SANITARY TUBE WORKS.—Show-rooms, Grant George's street, near the Town-hall, Leeds.—WILKS and PERKINS, Manufacturers of every description of Ornamental Terra-cotta and Sanitary Wares, Trusses, Fonts, Flower Vases and Pots, Chimney Tops, Ridge Tiles, Watercloset Pans, Fire-grate Backs, Fire-bricks, Quarries, &c.

TERRA-COTTA.—Statues, Statuettes, Vases Terms, Busts, Consoles, Bas-reliefs, &c., by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, Zinc alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexpensive of these inferior paints, the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocious and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 63, King William-street, City; GEO. JACK and BRADY wholesale and retail agents, 3, Tottenham-court, New-road, and 9, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 48, Norfolk-street, Liverpool. Also are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. by contract. Sold by Messrs. R. ANDERSON and CO. Timber Hall

OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs., and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 19, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 16s. and 24s. each casks exclusive

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 12s 6d each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges park railing, &c. 2s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4d. per stone.

LAMP WASH.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY Sole Manufacturers, now supply this luminous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, which sale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not regetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be and contrary to the statements put forth by those who have hitherto had the no supply. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON 31, King street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian, and other patent, and all other Cements in use for building purposes, Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its cementitious properties, that it is not affected by frost, and does not require to be stored in damp situations. Account of COMPARATIVE EXPERIMENTS with Roman Cement, of this and other Cements (read at the Institute of Civil Engineers), to be obtained of the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate slabs, Fire-bricks, Grindstones, Cement Chimney-pots, Gothic Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

BLUE LIAS LIME—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great extent to which this kind of Lime is held for buildings in wet and damp situations, such as wharfs, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality

SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GROUND ABERTHAW LIME (for Hydraulic Works, Blue Lias Cement, Cambrian Plaster, Caustic Flour of Lime (for Agricultural and Gardening purposes), and Portland Cement, shipped at Cardiff, in barrels, to all parts of the world, or forwarded by railway direct out of the works, in sacks or barrels, to any part of the kingdom.—JAMES BIRD and CO. Cambrian Cement Works, Cardiff.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fittings, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply their Trade customers with their Colours, which for quality and lowness of price are unequalled. Samples of the Colours may be seen at the offices of the Company, No. 51, Pall-mall. Address, W. PRINSEP, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 40,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.

M. AND N. HANHART, LITHOGRAPHERS,

64, CHARLOTTE-STREET, RATHBONE-PLACE, LONDON,

Beg to announce that they continue to execute orders in every branch connected with their Art, and being in daily intercourse with the most eminent Artists in London, any Drawings entrusted to them will meet with that careful attention which is necessary for success.

PORTRAITS FROM LIFE TAKEN UPON STONE, OR COPIED FROM OIL, WATER-COLOUR, AND OTHER DRAWINGS.

Copies from Daguerreotypes, and all other Photographic Productions, executed upon Stone the size of the Originals, or enlarged.

OIL PAINTINGS AND WATER-COLOUR DRAWINGS ACCURATELY IMITATED.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvedere-rd, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 2½ per cent on their wood bills as advertised on the 8th of November last is removed, from this date, consequently, the prices will be those inserted in the Moulding List, as heretofore.
1st January, 1854.

PREPARED FLOORING, &c.—ALFRED ROLLINS begs to inform parties shipping wood goods to that country that he can supply any quantity at short notice and at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Battens deals kept in bond for export.—Southwark bridge Wharf, Bankside.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of the kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 4-inch to 1-inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Plank, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory Wilton-road Pimlico Basin.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale at reduced prices as under, for cash.

4-inch Yellow, 17s. per square.		4-inch White, 16s. per square.	
5-inch	18s.	5-inch	17s.
6-inch	22s.	6-inch	21s.

Dantzic Timber 80s. per load.
Mouldings in any Joinery in very great variety.
ARCHIBUTT and ATKINS, N. St. Pancras Saw Mills, Old St. Pancras-road.

By Her Majesty's — Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which a piece a hundred per cent lighter is got out of upon the ordinary method of cutting veneers. For particulars, prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 4, Robert-street, Chelsea, adjoining the King's-road saw-mills.

VENEERS.—A quantity of excellent rose-wood and mahogany VENEERS with some maple PLANKS, TO BE SOLD at low prices. May be seen at Mr. HAYWARD'S, East Temple-chambers, 2, Whitefriars-street, Fleet-street.

ACORN TIMBER WHARF, Canal Bridge, Old Kentish-road. RICHARD MAY informs the building public that his business in future will be carried on at Acorn Wharf, as he has taken and re-built the stock of timber, deals, and all kinds of wood goods which are now ready for delivery, at the following reduced prices:—

Norway and Swede Timber, from 65s. per load.
Dantzic and Riga Timber, from 75s. per load.
Geffe Deals, Yellow, 4s. 6d.; White, 4 . 9d. per 12 feet.
Christiania Battens, Yellow, 3s.; White, 3s. 6d. per 12 feet.
Christiania Battens, Yellow, 2s. 10d.; White, 3s. 6d. per 12 feet.
Peterstd and Uddevalla Deals, from 2s. 10d. per 12 feet.
Prepared Floor Boards, 4in. Yellow 17s.; White, 18s. 9d. per square
" " 5 " " 18s.; " 17s. 6d. "
" " 6 " " 22s. 6d.; " 21s. 6d. "
" " 7 " " 26s. 6d.; " 24s. 6d. "
All other kinds of wood goods at equally reasonable prices, for Cash.—N.B. The extensive saw mills are now in operation.

FOR SALE by TENDER, Forty Timber and other TREES, a quantity of Fir Poles, and Five barred Gates, &c. now lying on the estate of the Finsbury Freehold Land Society, at Wolstead, Tottenham, Middlesex. Particulars to be had of Mr. LAMBERT, Surveyor, of 5, New Basinghall-street. Tenders to be sent in on or before THURSDAY the 2nd inst. at R. A. MARCH, Secretary.

TO BE CLERGY, AND TO ARCHITECTS, BUILDERS, &c.—STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and with all the usual good smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of oak, Mahogany, or Wood, so much admired in the new Houses, and especially the entrance doors of the Crystal Palace, in Hyde-park, in 18 different specimens, giving full particulars, and statements of prices from any part of the kingdom
HENRY STEPHENS, 54, Stafford-street, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is GREEN'S WHOLESALE WAREHOUSE, 29 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

SWEABORG and HELSINGFORS Dedicated by permission, to the Right Hon. Sir JAMES GRAHAM, Bart. M.P. and the Lords of the Admiralty
Messrs. PALL and DOMINIC COLNAGHI and Co. 13 and 14, Pall-mall East, publishers to her Majesty, beg to announce an authentic representation of the above places, from sketches taken in the Baltic, by Mr. E. T. DOLBY, and various official documents; showing the nature of the Island, forming the elaborate fortifications of Sweaborg, the construction of the batteries, and the exact number of guns mounted upon them; also, the whole of the picturesque City of Helsingfors. Executed in double-tinted lithography, by Mr. J. WILKINSON, printed by Messrs. DAY and SON, On the important scale of the views of Kronstadt, by Mr. E. T. DOLBY; and of Sevastopol, by Lieut. MONTAGUE CORELLY. Size, 26½ inches by 15 inches. Price 7s. 6d Coloured, 10s.

IRON HOUSE BUILDING.
THE PRACTICAL MECHANICS' JOURNAL for July 1st contains a large plate Engraving and Description of Messrs. Bellhouse and Co.'s Iron Custom-house, at Payta, Peru; with original articles on Nelson and Co.'s Blowing-engine with large plate Engraving, Tom's Hydrostatic Ships, Windlass; Manning's System of Precipitating Sewage; Opening of the Sydenham Crystal Palace, Two New Begbie Patent Laws; Patent Laws of the Papal States, &c.; Specifications of Recent Patents; Patent Law Reports; Reviews of New Books; Correspondence; Monthly Notes; Proceedings of Scientific Societies, Illustrated by Two large Plate Engravings and Forty Woodcuts.
HEBERT, 88, Cheapside; Editor's Office (Office for Patents), 47, Lincoln's-inn-fields.

Now ready, in 8vo. with Plate and Woodcuts,
RESEARCHES on LIGHT in its CHEMICAL RELATIONS; embracing an Examination of all the Photographic Processes.
By ROBERT HUNT, Professor of Physics in the Metropolitan School of Science
New edition thoroughly revised, with extensive additions.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

TABLES for the use of ARCHITECTS, Surveyors, Builders, Mahogany, Deal, and Timber Merchants, &c. in Pricing Materials in Rough from the Yard, all thicknesses therein, in any accounts, or as found not in every description of Joiners' Work, &c.
By JAMES WALE, Building Surveyor, Derby.
Price 6s. May be had of Messrs. J. and H. MOZLEY, 6, Paternoster-row, London; of W. HORSLEY, Sadlergate-bridge, Derby; and of all Booksellers; or from the Author, 20, Abbey-street, Derby, on receipt of the amount in postage-stamps.

THE FREEMASONS' QUARTERLY MAGAZINE. New series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. V. for April, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

ARCHITECTURAL PUBLICATION SOCIETY.—Instituted 1848. Copies of the works for the first year (1848-9) are required for new subscribers. The DICTIONARY OF ARCHITECTURE commenced for the year 1850-51, is supplied to members on payment of the annual subscription of one guinea.
Treasurer, THOMAS L. DONALDSON, Bolton Gardens, Russell-Square
Honorary Secretary, WYATT PAPWORTH, Esq. 14, Great Marlborough-street, from whom a list of the works issued can be obtained.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 34, p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

The Builder.

SATURDAY, JULY 15, 1854.

THE Cambridge Meeting of the Archæological Institute has been productive of much interesting matter, and has passed off, on the whole, very satisfactorily. Although known to most persons, the attractions of Cambridge itself are very great: its buildings, its collections, its gardens, afford unfailing delight. It is less picturesque than Oxford as a town,—less beautiful,—but it has separate features (King's College Chapel amongst the ancient buildings, and the Fitzwilliam Museum amongst the modern) which the latter cannot match. Without attempting to give a complete account of the proceedings (the local papers have done so very fully), we may indicate the salient points, and quote a passage or two from some of the papers and speeches.

The local arrangements were very good: a brief "Itinerary" and a map of Cambridge were given to each member, and enabled them without any difficulty to find their way to the various buildings and other objects of interest,—the beautiful chapel of Jesus College, the fine area of Trinity, or the restored Round Church, St. Sepulchre's. The clearance of buildings at the east end of St. Mary's, to enlarge the Market-place, has made repairs and restorations necessary: something should be done inside too. The new Hall at Clare, under the direction of Mr. Salvin, is approaching completion. The works at the Fitzwilliam Museum are suspended for want of funds, so that the interior still retains its unfinished aspect. The new aisle, which has been put up against the well-known Saxon tower of St. Benedict's is Early decorated in style, and does not agree pleasantly with the tower. How it should have been done may be a question, but certain it is that the result of the course actually pursued is not satisfactory. Although the tower, with its long and short stones at the angles, and its baluster windows, is admitted to be Saxon, it was supposed that the body of the church had been erected in the thirteenth century. When, however, it was determined to rebuild the north aisle, and to place it a little further to the west, it was found that the nave also was of the Saxon period.

Looking into King's College Chapel, that—

> "Immense
> And glorious work of fine intelligence;"

with its

> "Branching roof,
> Self-poised and scooped into ten thousand cells,
> Where light and shade repose, where music dwells,
> Lingering—and wandering on as loth to die;
> Like thoughts whose very sweetness yieldeth proof
> That they were born for immortality,"—

we were forcibly struck by the injury to the effect of the stained-glass which has been produced by the recent cleaning and repairing, at an expense of something like 300*l.* each window. Its gem-like character is gone. It is to be hoped that the windows at present untouched will remain so.

The museum of the Institute was formed in the lecture-rooms of Trinity College, and contained many objects of interest; a fine collection of ivories, in the shape of book-covers and diptychs, Anglo-Saxon antiquities, the sword of Tiberius, so called, found at Mayence, and contributed by Mr. Farrer, and some ancient plate from the colleges. Oliver Cromwell's conical hat (should the printer put an *m* for the *n* it will not be a mistake), and a pair of metal "stays," if our lady-readers will pardon us for naming what some of them think unmentionable, were amongst the oddities of the museum. The stays are ascribed to the reign of Henry VIII.

At the inaugural meeting, on the 4th, Lord Talbot de Malahide, the president, who has greatly improved as a speaker, spoke of the possibility of discovering the works of classical authors once famous in Constantinople, and of the greater discoveries yet to be made in Nineveh and Egypt. The numismatist, the philologist, the archæologist, he said, were all the investigators of sciences which were the aids of history. Rawlinson, Layard, and others who had pursued their investigations in Assyria; and Champollion, Young, Wilkinson, and others who had laboured in the Egyptian field of antiquities, all belonged to the same category of inquirers. Dr. Guest had thrown a light on the history of his country in the period between Roman and Norman dominion that was before unknown. It was not history and kindred sciences that had alone been benefited by archæology, but the arts also had been influenced by it. Within the last few years they had gained some important knowledge in the art of staining glass; and archæological study had given a new and superior direction to the subject. It was through archæological research that we had of late years been induced to alter and improve the architectural character of our public buildings. Fifty years ago architecture was no study, and there was no correct taste observed; but the subject had been taken up by men of talent, with zeal and ability, and a great change had been effected.

The Disney professor (Marsden) read a dissertation, having more special reference to the archæology of Greece and Rome, to which his duties are restricted. He pointed out, that,—

"In the possession of Trinity College are several Greek inscriptions upon marble, of some importance. The principal of these is one well known as the Sandwich marble, having been brought to England by the Earl of Sandwich, from Athens, in the year 1739. It contains a list of contributions to the expenses incurred by the expedition for the lustration of the island Delos, in the third year of the 88th Olympiad. Another is a decree made at Ilium, and brought by Mr. Edwd. Wortley Montague, from Sigeum, in 1766: it was presented to the college by his son-in-law, the Marquis of Bute.

In the vestibule of the Public Library are certain inscriptions and pieces of sculpture, the principal part of which were brought to England by Dr. Edward Daniel Clarke. One of these inscriptions, which was brought from the Troad, was believed by Porson to be nearly as old as the Archonship of Eucleides, the era at which a well-known change took place in Greek Palæography, about 403 B.C. Another inscription is a sepulchral one, brought from Athens, to the memory of a certain Eucleides of Hermione, whom Clarke himself believed to be the celebrated geometrician; and under that impression he thought that he had found for it a congenial resting-place among the mathematicians of this University. But there is no evidence whatever that this Eucleides was the geometrician, and the probability is decidedly against it.

One of the most remarkable of Dr. Clarke's marbles is a mutilated statue of Pan, which was found in a garden, close by the grotto sacred to Pan and Apollo, below the Acropolis of Athens."

Mr. Cooper (town-clerk) mentioned, in the course of a paper on "Royal Visits to Cambridgeshire, and the ancient House of the King at Newmarket," that Inigo Jones furnished designs for a palace at Newmarket; and that there is also extant a drawing by him for the "Office of the Works at Newmarket."

Professor Willis, in the paper on "The Buildings of the University," read on the second day, when Prince Albert was present, showed that Cambridge was indebted to Oxford, so far as the management and architectural arrangements of the colleges were concerned. A college very much resembles a monastery.

"In a Benedictine monastery the elements were a church on one side of the quadrangle, and cloisters agreeably to the magnitude of the monastery. Then there was the refectory (or hall), the chapter-house, dormitories, and other offices appertaining to the monastic system of life. In a college we found a number of men living together, performing their devotions together, dining together; and we found the quadrangle and the hall, the chapel and the master's lodge, and in the larger colleges the cloister. At the beginning of the University system the students were lodged in hostels—places where they had to pay a price for their own maintenance. Those places were governed by University officers; and no student could benefit from the University, or take a degree, unless he lodged at a hostel; and these hostels had been said to correspond with the halls of Oxford. At the commencement, then, these colleges did not assume a regular form; they appeared to have had a common hall, but instead of a chapel the students were directed to attend their own parish church. When a college was to be founded, some tenement was taken and converted into a lodge, and buildings were added, next the hall, until a quadrangle was formed. He would show how the different colleges at Oxford and Cambridge succeeded each other. Merton College, Oxford, was founded in 1274, and Mary-hall in 1239. Peterhouse, Cambridge, was founded by Hugh de Balsham, in 1257; and at the same time he established students in St. John's Hospital. At Oxford, in 1249, was founded University College; and in 1326, Oriel. Then came our King's-hall and Clare-hall; after which Oxford took the lead, until the foundations of Pembroke in 1347, Caius in 1348, Trinity-hall in 1350, and Corpus in 1351. We next came to New College, Oxford, which was founded by William of Wykeham, Bishop of Winchester and Lord High Chancellor of England, in 1386. That was a great year in the history of collegiate buildings, all colleges up to that time having grown up in the manner he had described; but New College had a plan, and was designed by an ecclesiastical dignitary who was an accomplished architect. William of Wykeham designed the plan, and it was carried out under his inspection. New College had the quadrangle, the hall, the chapel, the library, and all in their proper places, which rendered the building the most comfortable and convenient of any at Oxford. After the erection of that college, we might expect to find it exercising a great influence on buildings that succeeded it, and those colleges were Lincoln and All Souls'. In our own University, within about seventy years, we had King's College founded in direct imitation of New College. King's was a college from the beginning, in which every office was set out with the most consummate skill, and faithfully copied from the plan of William of Wykeham: in that way this college was most carefully described in the will of King Henry VI.; but although the king's plan was never carried out, the magnificent chapel attested his beneficence and the splendour of his ideas."

Then taking the existing colleges *seriatim*, he described their architectural peculiarities, dwelling for a long time upon what King's was to have been, and the particularity of description of the plans in the will of the founder, the latter almost answering to the specifications given to a contractor at the present day. The professor showed how the original character of many of our collegiate buildings had been sacrificed to utility, by casings of stone, removal of gables, and other alterations; so that the spectator would not take them to be the original buildings unless he were to go behind them.

Professor Sedgwick spoke very happily afterwards, pointing out how much had been done at Cambridge within his academic life,—and he was a mere child, having only lived fifty years in the university,—and said there was great vitality in the university. There were questions before the public, he continued, that allowed of much speculation, and we found some men running wild into visionary theories:

but it struck him that the stern logic and love of truth taught at Cambridge—and there was no place in which empiricism was held in greater contempt or truth worshipped more—had their effect upon studies such as that institute was concerned with. The beautiful simplicity of Professor Willis's lecture originated in the severe logical lessons taught him in his youth. The process of inductive reasoning was the thing to make men excellent archæologists. It taught them to examine premises, and draw just conclusions from them. Archæological subjects were apt to lead the imagination astray, and mental restraint of this kind had a most salutary influence. He was once wandering with Wordsworth among the Cumberland hills, when the poet said, "I delight in your subject; it is so uncertain." They might laugh, but what the poet meant was, that it was not good for men to be concerned with demonstrative evidence only, but that the exercise of the imagination was as important as the exercise of the reasoning powers.

The Hon. Richard Neville gave an interesting account of his discoveries of early antiquities in Cambridgeshire and the northern parts of Essex; and the Rev. Mr. Hartshorne followed with an account of the Parliaments of Cambridge, at the close of which he said, with reference to minute entries, that they often formed the strongest links to hold together the entire chain of historical fact, and that those who trained themselves in a precise method of investigation would find the benefit of it.

In the evening Mr. Norris Deck read a paper upon "Rebuses, or the Singular Name-Devices so extensively used in the Middle Ages." After showing that they were employed as early as the days of the Roman Commonwealth, and also by the early Christians in the catacombs of Rome, he proceeded to mention those now remaining in England, commencing at Cambridge with the well-known device of Bishop Alcock, at Jesus College—a cock and globe; Lady Margaret's, at St. John's and Christ's Colleges—a daisy (Fr. *Marguerite*); Bishop Fisher's—a fish with an ear of wheat in its mouth; Ashton—an ash tree growing out of a ton; Keyton—a key and a ton; and the seal of Dr. Robert Woodlark, founder of St. Catherine's Hall—a woodlark with the word "Roberti" above it. He then mentioned several remaining at Oxford; and afterwards adduced examples of a large number remaining in the architectural decorations of our cathedrals, abbeys, and churches, such as Romridge, Islip, Silkstede, Goldstone, Winchcomb, Nailheart, and others. He then noticed the rebuses remaining on seals personal and municipal, mentioning among many others the borough seal, the river Cam flowing through a bridge, and the very curious instance of Saffron Walden—three sprigs of saffron surrounded by a fortified wall—saffron walled in.

Mr. Freeman described Wisbech Church, and a long conversation took place upon the subject of preserving inscriptions upon tombstones and monumental brasses.

Mr. Westmacott, the sculptor, read a paper on Thursday morning, "On Colouring Statues," which excited more conversation during the rest of the week than any other paper. The opinion of the writer was decidedly unfavourable to the practice of colouring statues. Whether intended to attain a closer imitation of nature, or to attract attention and gratify sense, he regarded it as opposed to the true principles and legitimate aims of art, and as a mere resort to trick and clap-trap. He denied that the use of colour by ancient and mediæval sculptors could be held to be conclusive of the question, and contended that there was nothing to show that the practice was employed by the best artists in their ordinary works, or in any except those which were executed under special conditions and for particular objects, within which category came the statues of Jupiter Olympus and Minerva by Phidias.

Mr. Hawkins and the Dean of St. Paul's both expressed themselves very strongly against the re-introduction of colour. The Dean did not believe it was the general rule with the great Greek masters. Mr. Scharf, jun. said, that having been connected with the Crystal Palace, he was anxious to express his objection to the practice of colouring sculpture. He believed, too, the use of colour by the ancients in that respect was quite exceptional.

St. Mary's, Cambridge, was described by the Rev. E. Venables, and its present condition commented on; and then there was an excursion to Anglesey Abbey and Bottisham Church, previously described by the Rev. John Hailstone. The latter church is particularly remarkable for a series of monumental arches. The arcade is carried the whole length of the south aisle under the windows both inside and out, and each arch encloses a stone coffin.

At night there was another sitting, when, amongst others, the Rev. Collingwood Bruce read some notes on the Roman Altars at Trinity College, ingenious and interesting, although we could not agree with all Mr. Bruce's readings. Mr. Bruce is a very valuable labourer in the archæological field.

On Friday the whole body went off by an early train to visit *Bury St. Edmunds*, the Suffolk Archæological Institute having invited them to do so. The Rev. Lord Arthur Hervey and others, of the Suffolk Institute, met them in the Town-hall, where Lord Hervey delivered an excellent address on the antiquities of the place, pointing out how strikingly its features agreed with Mr. Kemble's description of an Anglo-Saxon town. As early as the seventh century a Christian church was erected in Bury, but it was not till the body of King Edmund, slain by the Danes, was brought there, that Bedericsworth, as it was then called, became a place of note.

Edward the Confessor came here, and many illustrious persons had trod the soil they were about to tread—William the Conqueror, Henry II., and Richard Cœur de Lion, the latter having visited it twice. Such, indeed, was the estimation in which it was held at the time of this monarch, that when all England was compelled to contribute to the ransom of the monarch, and all the monasteries were spoiled of their gold and silver for that purpose, no one presumed or dared to touch the shrine of St. Edmund. The case of this shrine had fallen into the possession of Walpole, who cut it in two to exhibit the carvings, and placed it in his chapel at Strawberry-hill. It was no doubt sold at his sale; and if any one could trace it, and let the Suffolk archæologists know what had become of it, they would be conferring a favour. John came to Bury; but according to the sarcastic Jocelin of Brakelond, displayed his usual meanness, as his shabby offering consisted of a piece of silk—and that he had borrowed of the monks. Edward III. and Richard II. offered their vows upon St. Edmund's shrine; and Henry VI. spent his Christmas at Bury, in 1443, but it was not to be presumed that it was a very happy one, for he had sought refuge at the shrine of the saint from the memory of and consolation for his woes, and he knew that his implacable Queen was not far off! The prior's lodging had lately been excavated by the Suffolk Institute, and its proportions fully justified the liking of the King, who loved the place for "its comeliness, its gardens, its vineyards, and its waters." It is recorded of Abbot Sampson, that he opened the coffin of the martyr, and feeling for his nose, found it "*Valde grossum et eminentem.*" But the proudest boast, perhaps, in the chronicles of Bury Abbey was, that it was here Cardinal Langton assembled the Barons of England; and producing the articles which he had prepared as the foundation of a charter of liberties, read them amid the acclamations of the multitude: here it was that the Barons swore upon the shrine that they would never dissolve their confederacy until the Magna Charta should be the law of the land.

After some allusions to fasting not having been common to modern corporations, he entered upon the early institutions of guilds, and then said he should have the pleasure of pointing out to them a house believed to have been a Jewish Synagogue of the eleventh century, and there was no doubt they were early established here, as the abbot, probably, like other great landed proprietors, was frequently in want of ready money. Then they had "Heathen-man's-street," now Hatter-street, and the building he alluded to was called Moyses' or Moses' House: this, too, had survived for the same reason as the abbot's buildings, that the Jews were a moneyed people, and could afford expense; but there was this in addition, that they were a persecuted people, and when oppressed required a strong place in which to hide their poor heads.

The address was admirably delivered, and this being over, away they all went, under the guidance of Mr. Samuel Tymms, and his "Hand-book," to examine for themselves the monastic ruins, the Norman Gateway, St. Mary's Church, St. James's Church, and other buildings in the town. Bury St. Edmund's, with its two song-bird streams, the Lark and the Linnet, is full of interest, and some would gladly have stayed there the whole day. The *Norman Gateway*, notwithstanding a certain compo'd aspect given to it in the restoration, is the finest thing of its kind in England. Many of our readers will remember that it was restored a few years ago, under the direction of the late Mr. Cottingham. When looking at the gateway, Mr. J. H. Parker made some observations on early and late Norman work (the gateway is of the former), and urged that in the early work the axe only was used, and not the chisel. He could scarcely mean this to apply to the execution of capitals and enriched mouldings. The gateway is 86 feet high and 36 feet square.

The *Abbey Gate*, completed about 1377, is a good specimen of Decorated work. It is much decayed. The *Abbey Church* (Norman) was of immense size: little now remains but masses of concrete,—portions of the walls. For years the old church served as a quarry for the town. Notice the picturesque effect produced by the perforation through the buttresses of the ancient bridge, and then away to *St. Mary's Church*, a fine specimen of Perpendicular work, with one of the finest open timber roofs ever seen. It is partly of the hammer-beam construction, with large carved angels, and a figure at the foot of each principal as a wall-piece. The principal, at the east end of the nave, is painted and gilded, and from it John Barret, who originally paid the cost of the decoration, still exclaims, in black letter, "God me gyde," and "Grace me gouerne," as he does, too, from the ornamented roof over the east end of the nave's south aisle, formerly his chapel. The "Veronica," or *vernicle*, in the stone roof of the little north porch is interesting, and so, too, are some of the monuments. The little modern tablet on the wall there, you may as well read. It is in memory of Peter Gedge, printer, who started the first newspaper in the town, and died in 1818; and it says,—

> "Like a worn out type,
> He is returned to the Founder,
> In hopes of being re-cast in a better and more perfect mould."

There are two small glazed openings in the east wall over the presbytery arch, which seldom occur. Such have been called the "Eyes of Heaven."

The inhabitants of Bury did not forget that

f any nobleman or prelate came to Bury in ormer times with 100 horses, the abbot was bliged to keep them one night in his stables vithout pay, and they provided ample entertainnent at the Townhall. When this had been lisposed of, and some pleasant words spoken, he party started for *Hengrave Hall*, a well-nown example of ancient domestic architecture, ften illustrated. It was built in the time of Henry VIII. by Sir Thomas Kytson. The entral doorway is a particularly fine example f late Tudor art.

The church, now disused (and bearing vidence that the owners are Roman Catholics), ontains some elaborate Elizabethan monuments o the Kytson family. The church has a round ower.

Risby Church, not far off, has also a round ower, without any architectural features: the ower-arch is semi-circular. The chancel arch pointed, but the mouldings and abacus are of he Norman style. Mr. Tymms, who read a brief escription of the church, considered that this ch had been semicircular in the first instance, id reused. There was little on the face of it lead immediately to that opinion; and in bsence of other evidence we should rather inine to the belief that the arch was of the ansitional period. A rood screen of fourteenth ntury work (the steps to the rood remaining), ith coloured niches in the wall, north and uth of it; a piscina; a low side-light on the uth side of the chancel, and a little stained ass, are the prominent points in the remainder the structure. The restoration of the screen as owing, it appeared, to the taste and zeal of rs. Alderson, wife of the incumbent.

At *Saxham Church*, which was also visited, ere is a round tower of greater beauty, a semi-rcular arcade and coupled semi-circular headed enings surrounding the upper story.

Some of the ancient bench-ends remain here. e tower is 56 feet high and about the same mber of feet in circumference. The tower-ch is semi-circular headed, the opening unually high and narrow—namely, 17 feet, and t 4½ feet wide. There is an elaborate monunt to Lord Crofts, Baron Saxham, who died 1677. The figure is leaning on the arm in the comfortable position peculiar to this period: rts, however, are well cut.

A semi-circular headed opening on the south e of the tower-arch, in the wall of the tower, unusual. It may have been intended simply a seat or disposable recess.

And now it was time to seek the train, and so ce more to Cambridge.

On the following morning *Audley End* and *Saffron Walden* were the objects aimed at. The skies re fortunately propitious, and everything was n that was marked out. The exterior of udley End is remarkable for its porches. The use was originally very much more extensive an it is now. The porches are in two stories, d have marble columns with richly ornamented ezes and parapets. There is a fine hall, and ny of the ceilings are good specimens of the of the period. Considerable works were ae about twenty-five years ago, under Mr. arrison. The chapel is a specimen of 1791 othic, worthy of Batty Langley himself. ne of the chimney-pieces in the house are bellent. The staircase, the pictures, Pope's air, and a score of other things would afford tter for a long talk, if we had time and ace, but we have neither. One of its most eresting features is the extraordinary collecn of British, Roman, and Saxon antiquities, lected by the Hon. Richard Neville in the urse of his excavations at Chesterford, Little ilbraham, Linton Heath, and other parts of mbridgeshire and Essex. The collection is of markable interest, and has been partly set forth by Mr. Neville in a fine volume noticed some time ago in our pages.*

In Mr. Britton's Essay on Ancient Domestic Architecture, in the "Architectural Antiquities," some particulars of Audley End are given,† with a plan, and views of the building, both as it was and as it is. The house appears to have been erected in 1616, at an expense including the furniture, of 200,000*l*. The original mansion surrounded two quadrangular courts. The greater of the two was destroyed, according to Walpole, by the advice of "that injudicious architect," Sir John Vanbrugh, who designed the present screen and stairs at the south end of the great hall. This screen and stairs, by the way, are very elegant.

Lord Braybrooke did not entertain his visitors but the corporation of Saffron Walden did, and the mayor (Joshua Clarke, Esq.) convoyed them across the park to the town-hall. Lord Carlisle joined them and spoke genially, as he always does. We hope, by the way, he intends to let us hear something about his travels in the East.

Lord Talbot de Malahide, in the course of a speech at the dinner, alluded aptly to the use of Saffron by Queen Elizabeth, but, he said, her Majesty did not get her saffron from Saffron Walden. On one occasion, however, at all events, she did, for in the minutes of the corporation there is an entry of the payment of 4*l*. for one pound of saffron, a present to Queen Elizabeth!

The church is for the most part Perpendicular, and has a noble arcade dividing nave from aisles: the columns, arches, spandrels, and clerestory have scarcely a parallel in any other parish church. In the shields ornamenting the spandrels in the south aisle, and in some other parts, the crocus (with reference to saffron) is introduced. There is a sculptured arcade in the north wall of the chancel aisle, perhaps worked in from an earlier building. In 1791-3 the church was restored and repaired at the cost of 8,000*l*. and some miserable work at the east and west ends of chancel and the west end of nave was put up. There is a good open timber roof, but we cannot agree with Mr. Freeman, who made some observations in praise of the church, in preferring it to the roof of St. Mary's, at Bury.

The spire, crocketted and not inelegant, was put up by Rickman, in 1832, in place of one of wood, and we fell over the following MS. entry in an account of the town at the museum:—

"Ward and Cheshire, for spire and tower	£2,923	0	0
Clerk of works.....	177	4	0
Rickman	216	5	10"

The museum is highly creditable to the town, and to Mr. Joseph Clarke, who has specially tended it, and is more particularly rich in specimens of natural history. Amongst its 'curiosities' may be mentioned a bowl of beginning of 16th century, and an embroidered glove given by Mary, Queen of Scots, to Marmaduke Dayrell, who, if tradition tell truth, put on a mask and cut off her head, being unable to find any one to do it.

Close to the museum are the remains of the castle of Walden, built, as some think, by Geoffrey de Mandeville, in the time of William the Conqueror. The concreted masses are so hard as to defy the edges of ordinary implements for their removal.

On Monday they went to Ely, but we cannot follow them farther. It must be sufficiently obvious that the week has not been wasted.‡

* "Saxon Obsequies, illustrated by Ornaments and Weapons, discovered by the Hon. R. C. Neville in Cemetery near Little Wilbraham."

† Hengrave Hall is also noticed. We were glad to see Mr. Britton at the meeting

‡ The architects who attended the meeting were Messrs. Bruton (Oxford), Talbot Bury, Donthorne, B. Ferrey, Godwin, G. Mair, Sharpe (Lincoln), George Vulliamy, T. Wyatt, &c. Let us add, for the information of a few, that the "Convivial Section" met as usual, and had very satisfactory sittings,—no reporters being present. "Let me play the fool," as Shakespeare says,—

> "Why should a man, whose blood is warm within,
> Sit like his grandsire, cut in alabaster?
> Sleep when he wakes? and creep into the jaundice,
> By being peevish."

OPERATIVES' MEETING-PLACES.

Prior to any advance in house ownership on the part of workmen, the *incubus* of the "public-house" is to be thoroughly cast off, the danger there lurking to be carefully avoided, the waste there consumed to be vigilantly guarded against. Not, however, allow me here to say, in the way of any rigid annunciation of what is called the "temperance" cause, do I state this much, but solely as a prudential preventive of danger; for how, let any one soberly ask himself—and this, truly, is a *sober* question—how is the trades' unionist to suppose that anything really beneficial can result from deliberations conducted and resolves made amidst the tobacco fume of the heedless toper, and in the muddled and maddened condition of the intellect so common to such a scene? The mere fact itself, too, of working men conducting their associative proceedings in such places, is invariably taken hold of, and perhaps in a general way very properly, as proof that no good can be expected to originate in, or come from, so bad a source. Does not the reader, he who habitually sees the *Builder*—does he not recollect the statement therein made, on this very subject, some few months back, how, in describing what may be called the "natural history" of strikes, the beer-pot and the pipe were graphically set off as the chief points in the picture, thus compelling the mind to cogitate and to give its decision upon what must be the necessary ending of so bad a beginning?

Unfortunately, and latterly, perhaps, to a greater extent than ever has been the case before, employer and employed are arrayed against each other in a desperate struggle for supremacy, the one insisting upon an unconditional obedience to what he puts forth as his "commands," and the other as resolutely disputing such authority, and making his own claim for "rights." Thus are there two interests drawn up in the bitterest and most unflinching antagonism to each other; the labour-purchaser denying, and the labour-seller demanding, concession; and because the *one* workman can do nothing of himself with the *one* employer, so he seeks the help of his fellow-workers, and thus on until *all*, or a large majority of the same class, are banded into *united singleness* against the *single* master, him whose very individuality is the chief element of whatever success he may achieve. But how and where, let me again ask, as respects the worker,—where or how is this union of purpose and action to be brought about? Why—as we learn from the article to which reference has already been made, and also from similar statements in numerous other quarters—newspapers, pamphlets, and books,—from the pot-house and its "parliament," and not from such calm and close operation of the reasoning faculties as might be indulged in, in the properly-roofed and benched, well-lighted, and well-ventilated, spacious Trades' Temple? No, we have none of these things, not a single "temple, sacred, not to poesy and the arts, but to mechanic genius and industry," as a contemporary has praisefully remarked in describing the Panopticon: we have nothing but the public-house to shelter us; and there the whole routine of our gravest concerns is transacted; *there*, among bluster and beer, rather than where the thoughts would be less hurt and distracted, so that austere deliberation might be seen to sway, and impel, and consolidate, as men ought to deliberate who are about to imperil their closest interests.

J. D. D.

Crystal Palace Handbooks.—The fortunate possessor of the first edition of the eighteen handbooks to the Crystal Palace, may, to judge by the notices of new editions in several prefaces, expect daily to find his library *passé*. Would it not be far better, both for the public and the company, to supply from time to time, as may be desirable, an *appendix* to each handbook, either distinct or paged to "follow." Few, I think, would purchase a new edition, while few would fail to possess themselves of the appendices.—E. B.

ANCIENT KNOCKERS.

AT THE CONVENT OF LUNE (A.D 1347).

AT THE CHURCH OF ST. PIERRE, HAMBURG.

ON A HOUSE AT LUNEBURG.

STREET-DOOR KNOCKERS.

FROM time to time we have in the *Builder* given examples of door-knockers of various dates, and of different countries, hoping that they may be the means of suggesting fresh designs. Some may consider the matter trifling, yet more depends on the style and taste of street-door knockers than many persons will at a first glance at the subject imagine. We have often noted houses of goodly appearance, the window-blinds and the windows clean and neat, but the appearance of the knocker has been unsatisfactory—perhaps a little awry, or loose at the joint, or so objectionable in design that no one of the least taste would willingly expose himself to the task of frequently facing and handling a matter which affects the nerves of any one of good taste so much as discordant and unmusical notes. Experience has shown that this seeming trifle is, in the majority of cases, a true index of the condition of affairs. In the house on which is the untasteful knocker will be generally found looking-glasses with the frame of the form shown in a previous article, and other things corresponding. If the knocker is awry, loose at the joint, or not well polished, we advise those who may be seeking lodgings to beware of slip-shod waiting-maids and their usual accompaniments.

The street knocker has kept a house unle before now.

From the most remote periods it is certain that the lion's head has been a favourite device for door-knockers; and it is not a little curious to note the effect which an opportunity of viewing and becoming acquainted with the form of the animal has had upon the artists. On the knocker engraved, of 134 (from La Croix's book), is evidently a tra ditionary copy of the maneless lion of India which, in progress of art, has come into the hands of the sculptor. A comparison of the above with the lions on door-knockers of the reign of George III. will show that the travel ling menageries have been the means of pro ducing lions more natural and correct. It is however, curious to note the varied qualities o lion-headed knockers—some fierce, hirsute and terrible, others so mild and amiable that strange child in the nursemaid's arms would not hesitate to touch them: some are good a works of art, and others, as might be expected remarkable for their clumsiness and deformity.

That the street-door knocker has been con sidered a matter of importance, is shown by th numerous varieties of form and materials which they are composed. A nobleman, whos London residence is not far from Park-lane, ha a knocker composed of mosaic gold, and good design, fixed on the street door during th season. We will not mention the exact localit lest some of the young blood of Whitechap should sally forth in imitation of their better and make a midnight spoil of this costly articl

The wayfarer in the streets of London wi note knockers formed of the heads of the Egyptia sphynx, female faces of Greek and other style and of no style at all, in the form of harp wreaths of laurel and other plants: some a like the funeral devices upon coffins, son simple circles, and others square, oblong, a oval, and of long form like the handle of a pum

Many yet living will remember that in co siderable towns door-knockers were less n merous than at present. In the cathedrals (at Durham) and other religious edifices, wa the sanctuary knockers of which in former tim the murderer or other great criminal needed h to catch hold, and then bid defiance to the la But knockers fifty or sixty years ago were many places as scarce as umbrellas: a hospitable-looking sneck or latchet was comme Nothing would in most instances have giv more offence than to knock ceremoniously at friend's door.

We here give an engraving of a knocker formerly in use in Scotland, which at the time we saw it was on the door of the Old Mint in the Cannongate, but is now preserved in the valuable Museum of the Royal Scottish Society of Antiquaries. This description of "rasp," or "tirling pin," or knocker, is alluded to by the Scotch poet in "Sweet William's Ghost," as follows:—

> "There came a ghost to Margaret's door,
> With many a grievous groan;
> And ay he *tirled upon the pinne*,
> But answer made she none."

Throughout the whole length and breadth of the land, there are in the towns now few doors without knockers, except in the wretched and dilapidated abodes of the very poor, where the doors night and day are left often without bolt or other protection; their misery neither tempting the sudden and inconvenient call of friends nor thievish visits. The knockers as well as other matters which would raise a penny have been removed. Street knockers have now, however, become an important feature of our domestic edifices. There is am room for improvement in their design.

ON ARCHITECTURE AS REPRESENTED IN PICTURES.*

PICTURES exhibit, in a convenient manner for study, the different styles of architecture in direct connection with different kinds of scenery. As we are thus enabled to appreciate the relation of architectural buildings to the climate and character of different countries, we have great facility in selecting those styles or orders of architecture which are best adapted to the scenery, as well as the climate and conditions of our own country. Moreover the architecture which adorns pictures is exempt from those trammels which considerations of economy and site, and other hindrances, impose on the work of the architect; and it therefore possesses every facility and advantage for realizing the kind of edifice which, in the mind of the artist, appears most consistent and becoming.

As the kind of embellishment which architecture supplies for historical pictures was more resorted to formerly than at the present time, it is by considering the old masters that interesting facts may be chiefly elicited. One of the most striking points in connection with this subject is, that architecture seems to have been generally treated by them as a somewhat conventional ornament, adapted to the effect of the picture, but without reference either to the country, or to the period of the event represented. The style of architecture most usually selected was the Classic, which is frequently brought into connection with events taken from the Scriptures, and which therefore occurred chiefly in Judea. But notwithstanding the impropriety of introducing the Classic style of architecture into subjects which are entirely Eastern, the association of the simpler orders of such architecture with Scriptural subjects does not strike so offensively as might be expected—a proof, it may be considered, that this style is remarkable for its great purity, and for its suitableness for all dignified or elevated subjects.

It would be difficult to believe that the Saracenic, the Renaissance, or any other elaborate style of architecture, could by any contrivance be made to associate with events so solemn, and at the same time so decidedly local, as those which are borrowed from Scripture.

Raffaelle was one of the Italian masters who had most recourse to architecture for the embellishment of his pictures; and although he did not always avoid the inconsistencies and anachronisms which contemporary artists were apt to commit, he showed an attention to circumstantial facts and particulars which very few equalled. One of the earliest and most beautiful of his works, known as "The Marriage of the Virgin Mary," now in the gallery of Milan, is adorned by an elegant building of sixteen sides, with Ionic columns, probably intended for a synagogue, but not having anything Eastern in its style. Its appearance has, however, nothing offensive, but affords a pleasing accessory to this beautiful subject. In his painting of "Paul and Barnabas at Lystra," this great artist has shown the same attention to circumstantial details, and with the happiest results; for amongst the statues which decorate noble edifices, the statue of Mercury appears conspicuous, reminding the observer, at once, that the inhabitants believed St. Paul himself to be that God; and that they were about to offer sacrifice to him as such: it is plain how much the historical account is elucidated by such particulars. "St. Paul preaching at the Areopagus at Athens," likewise affords a successful proof how much Raphael enhanced the beauty of his historical pictures by means of tasteful architectural buildings, of which the classic orders, clearly defined, are perfectly and appropriately characteristic. In another picture (of which the cartoon is at Hampton Court) representing St. Peter and St. John healing the lame man at the gate of the temple which was called "Beautiful," he has introduced a number of spiral columns, richly and elaborately decorated; by which means he has marked impressively the characteristic splendour of the porch. But in this instance his attention to particulars does not appear to have been equally successful, for the effect is meretricious, and detracts from the solemnity of the subject. A simpler style of architecture, though perhaps less truthful, might have been better suited to the dignity of the composition.

Neither Michelangelo nor Leonardo da Vinci, although the first was an architect and the second an engineer, seems to have resorted much to architecture for the embellishment of their pictures. Nor did Correggio, who at Parma contributed so much by his frescoes to embellish the Duomo, avail himself of the beauties of architecture to enrich his most graceful subjects. The Venetian school of painting, however, borrowed a great deal from the sister art; and in this we may probably mark the influence of the architectural magnificence of the city.

Gentile Bellini was one of the earliest masters who painted architectural subjects; and during his residence at Constantinople he executed a large, and, at the same time, elaborate and highly finished picture of the church of Santa Sophia, which is now in the gallery of Milan.

Another picture of the Venetian school, very remarkable for its architectural interest, represents what was termed the "Miracle of the Ring," so famous in the Venetian annals. It was painted by Paris Bordone, and the background represents the beautiful and highly decorative architecture of the Palazzo Ducale almost as it now stands. But the artist of this school who gave the greatest importance to architectural ornament in his pictures was Paul Veronese. By the introduction of architectural monuments on a large scale he imparted great beauty and originality to his pictures. He often gave perspective depth and greatness to his compositions by representing these edifices at various distances. Further, by placing them in the most diversified situations he added in a remarkable degree to their picturesqueness. These architectural arrangements afforded him the means of diversifying the positions and attitudes of his figures, which he represented alternately ascending flights of steps, leaning over elevated balconies, or climbing up buildings, in order to overlook the principal scene of action.

The Dutch and Flemish, as well as the French painters, usually showed the same disregard for a style of architecture in accordance with Eastern subjects as did the Italians. For instance, Rubens, notwithstanding his extensive information, and his high position in society, introduced the Doric order of architecture in connection with "The Murder of the Innocents." Nicholas Poussin, who largely availed himself of the advantages afforded by architecture, introduced columns, apparently of the Corinthian or Ionic orders, in paintings of David and Goliah. "The Murder of the Innocents," by Le Brun, now in the gallery at Dulwich, is likewise enriched by edifices of Roman structure, having columns of the Corinthian order. We might have expected rather more antiquarian knowledge or attention to facts from so eminent and comparatively modern an artist.

But it is especially as an embellishment to the landscape that architecture attains the highest value, and often ennobles scenes which, without such ornaments, would appear tame or trivial.

Among the landscape painters, Claude de Lorraine availed himself most effectually of the resources which architectural subjects afford; and by the frequent introduction of temples, arcades, palaces, and other buildings, into his landscapes, he imparted to them an elegance, and an air of classic dignity, which it would perhaps have been impossible to attain without the elevating influence of this class of accessories.

The two Poussins were especially fond of that kind of embellishment which is furnished by architecture; and Gaspar Poussin, who was essentially a landscape painter, added by such means greatly to the interest and character of his landscapes. For instance, he marked the strength of any lofty situation by walls and fortifications; the particular aptitude of any site for being inhabited by a large and populous city; and the loneliness of a retired spot by tombs, obelisks, and mausoleums. He thus stamped more impressively the local character of each subject.

The Dutch landscape painters, as Poelemburgh, Berghem, and Leutherburgh, introduced buildings and monuments chiefly as ruins, in which forlorn, but venerable condition, these greatly enhanced their small pictures. But there is a class of artists who, instead of making architectural buildings serve as an ornament to their landscapes, completely spoil their compositions by great abuse of the resources which it affords. Amongst these may be mentioned Marco Ricci, Lingelbach, and sometimes Panini. They availed themselves of their sojourn in Rome to copy the numerous monuments of various periods which there abound. Thus they did, however, without taste and discernment; and in their pictures they introduced promiscuously, and in the greatest confusion, monuments of different periods, of different styles of architecture,—indeed of the most opposite character, accumulating these incongruous elements with a confused profusion of which Rome itself does not afford an example. In some instances they rendered this heterogeneous assemblage more ludicrous by intermingling figures of different dates and costumes with the ruins.

Modern landscape-painters have devoted themselves more exclusively to nature herself, and have availed themselves generally in a less degree of such means of embellishment as architectural buildings afford. However, the French marine artist of the last century, Joseph Vernet, frequently introduced architectural buildings, especially lighthouses, bridges, and aqueducts, with great taste and effect; and his English contemporary, Wilson, realised corresponding advantages by the ruins of such monuments. I need not remark that the late Turner, when not led by the fascinations of colour to neglect the resources of ornamental form, availed himself most advantageously of the decorative beauty of architecture in his landscapes, as may be seen by the grace and elegance which his picture representing "The building of Carthage" derives from its architectural monuments. We are aware that John Martin so completely commanded the resources of architecture that he thereby imparted a character of combined splendour and vastness to his compositions. In some of his pictures ancient cities surprise the observer by their extent, their remarkable situation, and the originality of the buildings. In others, as in "The Feast of Belshazzar," it is the magnitude of the palaces, and other edifices, which causes our admiration. In these subjects a style of architecture has been adopted which, though to some extent ideal, at least carries the mind at once to the time and the place of the event recorded, an attempt which had not been made by the landscape painters of olden times; and which, although till lately quite new in this branch of art, Martin carried out with the most complete success.

In the course of the discussion which followed, Mr. Donaldson said he considered that the painters who had introduced architectural subjects into their pictures might be divided into two classes: the first were real painters of buildings, such as Canaletto and Panini; the others, as Raffaelle, treated architecture merely in the light of an accessory, and to give contrast, by the repose of the structural masses, to the violent action and bustle of the figures. The Venetian School afforded good examples of the second class. It was obvious that though Raffaelle had exercised great thought and discretion in such accessories, he had committed some incongruities, as in representing strictly Roman architecture in buildings forming the background of the cartoon of St. Paul preaching at Athens. The introduction of architectural subjects into pictures might naturally have taken place in a city like Rome, abounding in ancient remains, which would work on the imagination of the great men composing the brotherhood of practitioners in art which existed there in the fifteenth century. Michelangelo was an architect by accident—painting and sculpture were more especially his forte,—and his particular case he would adduce as a reason why he entirely disagreed with Mr. Ruskin as to painter-architects alone deserving the palm of excellence. Palladio, Sanmichele, and Brunelleschi, on the contrary, were highly successful as architects,—great play of contrasts was exhibited in their works—but they were not painters. The Beautiful Gate of the Temple shown in one of the cartoons, might perhaps have been more correctly shown with columns of Egyptian character, but it might be supposed that

* Read by Mr Henry Twining at a meeting of the Institute of Architects, June 12th.

Raffaelle was himself ignorant of the real architecture of the place which he had undertaken to represent. Claude, on the contrary, introduced subjects taken from Italian ruins, finely grouped, and with great propriety, into his landscapes, and his example had been followed by our countryman Turner, who, by desiring to have one of his pictures hung between two by Claude, in the National Gallery, had evidently implied the estimate on which he set his own painting; and yet it should be remembered that Turner had accomplished no more than Claude had between 200 and 300 years previously, without any predecessor to instruct him, from whose productions he could obtain hints, and learn to avoid errors.

Mr. Scoles said that Northcote had excused himself for instructing his pupil to copy armour of the time of the Commonwealth in a painting representing a classic subject, by saying, it is better to copy what we can paint well than to attempt what we do not know. Turner's skill in introducing architectural subjects into his pictures might arise from the knowledge he had obtained in the office of an architect (the late Mr. Bonomi), where he was in fact employed to put in background to the drawings. The architecture introduced in the cartoon representing the Beautiful Gate of the Temple might not be so erroneous as had been supposed, as it should be remembered that Jerusalem, at the time represented, had been for years under Roman dominion, and that the gate in question was probably a comparatively recent construction.

Mr. Papworth had the impression that Raffaelle was said to have represented the Beautiful Gate in conformity with a tradition concerning its structure. Some of the most effective compositions of architectural subjects in pictures had been produced by artists who were strictly scene painters, such as Bibiena, the Quadratisti, and Servandoni—celebrated for his designs for fêtes,—while even architects, as Novosielski, Soane, and Smirke, had furnished designs for scenic decorations: Turner, in early life, had made numerous accurate drawings for architectural and topographical publications.

Mr. C. H. Smith (Visitor) said that though the great masters had committed such anachronisms in buildings and costumes, men of less note were often free from such faults. James Barry, in his painting of the Olympic Victors on the walls of the Society of Arts, in the Adelphi, had correctly represented a Greek temple, and the peculiar Greek head-dress, before the publication of Stuart's work on Athens, and the acquisition by the Government of the Elgin marbles had given accurate information on these points. Unfortunately, painters were apt to neglect the rules of perspective, and hence they could not grapple with architectural drawing.

Mr. F. C. Penrose, with respect to the anachronisms of the old masters, thought that they did not strain their imagination to produce representations of objects which were of necessity uncertain and beyond their reach. All the knowledge we possess should be brought to bear on the subject, but in the present day, entering into too much detail caused artists to lose sight of the main object by overscrupulous attempts at accessories, as might be seen in some paintings in the exhibition of the Royal Academy.

BUILDING MEMS. FROM IRELAND.

A FRANCISCAN Chapel is to be built at Willowbank, Ennis, from designs by Mr. P. Sexton.

A monster weaving establishment is stated to be in progress of erection in connection with the large flax factory of Messrs. Russell, at Limerick, and eighty masons at work thereon. We hear that, when completed, 800 hands will receive employment on the premises, and we heartily wish that such *industrial* projects were more general in Ireland.

The foundation-stone of a new parish church has been laid at Innishannon. 1,000*l.* have been contributed by the parishioners.

The line from Dublin to Bray has been opened for public traffic, having passed the inspection of Capt. Wynne, R.E. The completion of this railway affords greater facilities to tourists in visiting the beauties of Wicklow. The metropolitan terminus will be 345 feet in length and contain waiting-rooms, booking-offices, &c. It is stated that the covered area will be 254 feet by 30 feet. At Dundrum and Bray the stations are complete.

A religious edifice is to be built at Courtbrack, Limerick. Mr. W. D. Butler, architect.

A new church is to be erected at Milford, county Donegal, and that at Timahoe, Queen's County, is to be rebuilt.

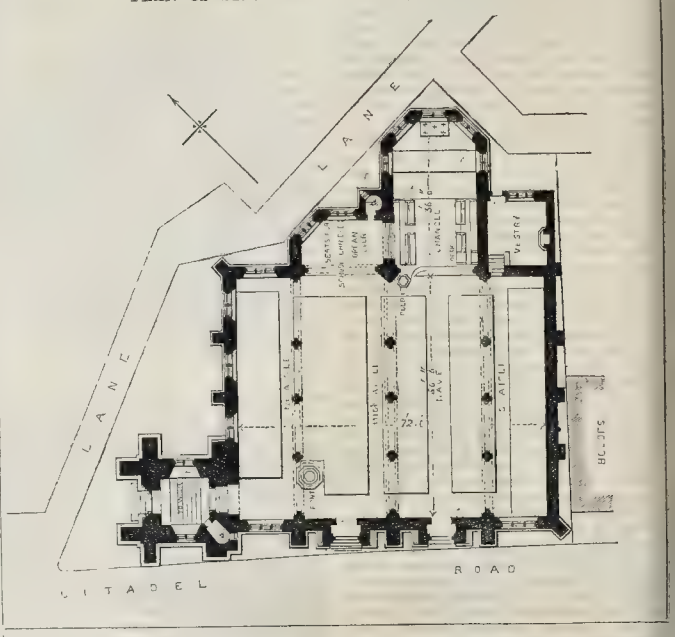
The new butter weigh-house in connection with the Limerick markets has been opened for business. It is divided into three compartments, over the centre of which is a glass dome.

A contract has been entered into for completing the interior walls and ceiling of St. Mary's, Clonmel; amount, 1,780*l.* The skeleton and roof have already cost 4,000*l.* and were built from the designs of Mr. Keane, architect. The plan is cruciform, 136 feet in length by 40 feet in width, and the transepts extend 30 feet each; height of walls, about 48 feet; style of architecture, Ionic; the ceiling to be segmental. Three vestibules are formed in the front, and over the centre one it is intended to have a lofty bell-tower and dome, with a tetrastyle portico of limestone. We are told the entire expenditure will be about 8,500*l.* Mr. John Bourke, architect.

The foundation-stone of a new episcopal chapel at Ballysinnan has been laid.

A new convent is to be erected at Kilrush, county Clare, and we hear that a similar class of edifice is contemplated at Clondalkin, county Dublin.

A new Presbyterian meeting-house is intended to be built at Dungannon, on a site granted by Lord Templemore; also a Wesleyan meeting-house in same place.



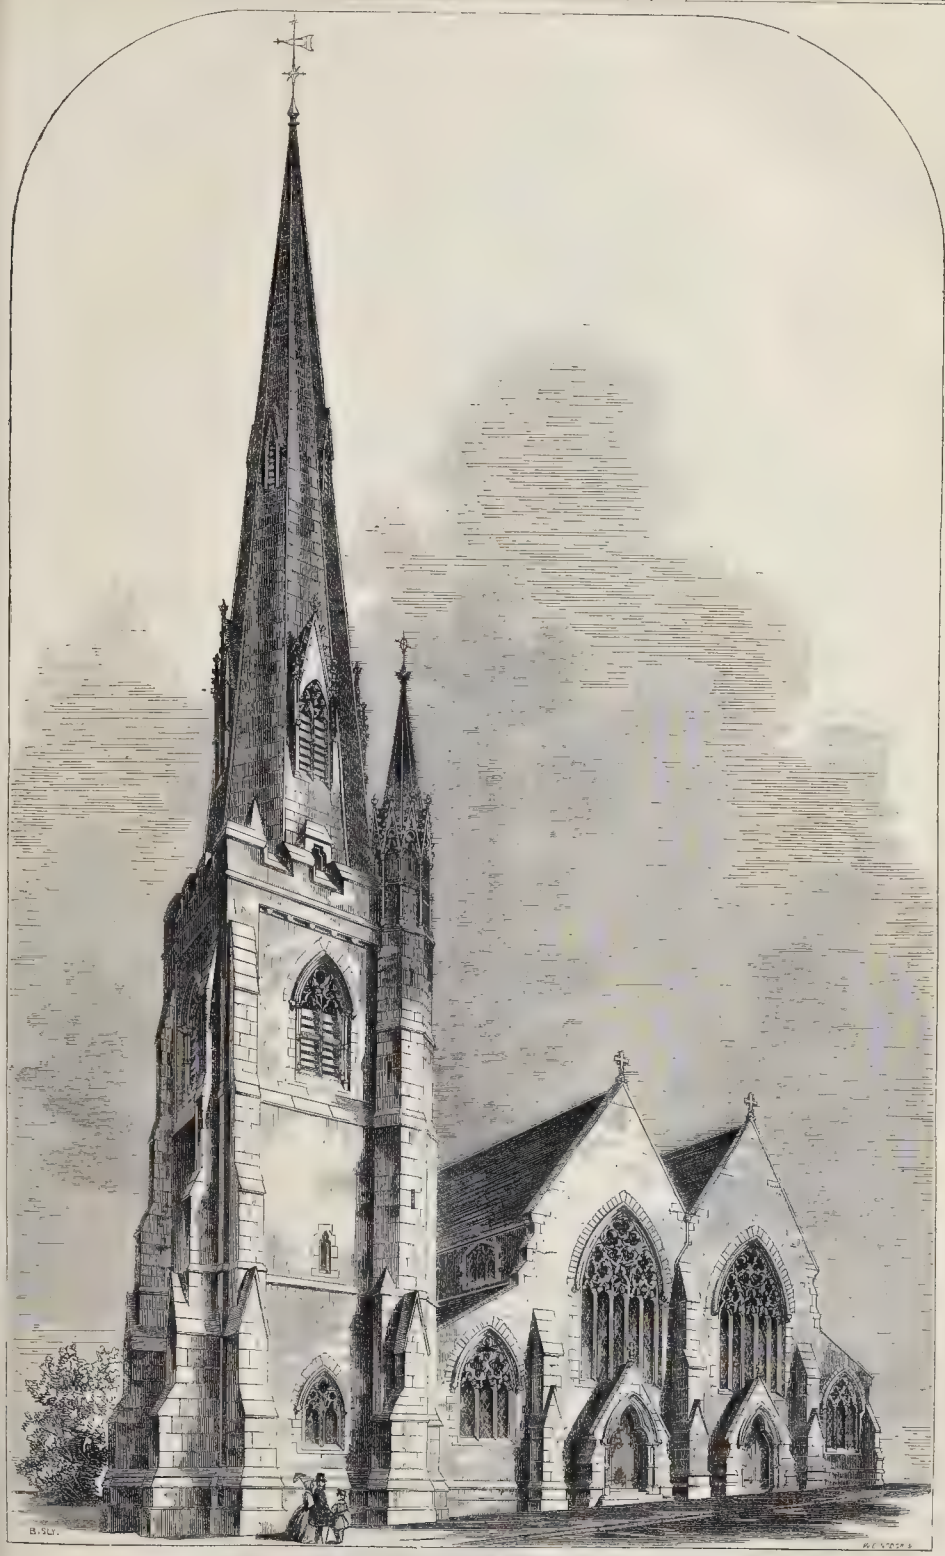
THE TOWER OF ST. MARY'S CHURCH, TAUNTON.

OUR readers will probably remember that the authorities of St. Mary's, Taunton, were not quite satisfied with the announcement of their architects that the tower of St. Mary's Church could not be repaired, but must be rebuilt. With proper caution, they decided on taking other opinions, and requested Messrs. Scott, Manners, and Cornish to report upon it. These gentlemen have just now announced the result of their examinations, and the substance of their report, we are told, is, that in order to effect the complete restoration of the tower, "the only safe course is that recommended by Mr. Giles and confirmed by Mr. Ferrey, to rebuild it exactly in its ancient design."

We are sorry to find this complete agreement amongst the architects appealed to: we had hoped, notwithstanding the deplorable condition into which the tower has been allowed to fall, that it might have been secured, restored where decayed, and so preserved.

Will the custodians of other beautiful specimens of ancient skill be warned by this, and wisely support and repair, to prevent the necessity of rebuilding?

PLAN OF ST. JAMES'S CHURCH, PLYMOUTH.



ST. JAMES'S CHURCH, PLYMOUTH.

BY reference to the ground plan it will be seen that the site offered unusual difficulties for the erection of a large parish church. These have been overcome by the not unusual arrangement of an additional aisle, though the manner in which it has been carried out is original. Externally the church has the appearance of consisting of two naves (lighted on their outer sides by clerestory windows, and divided by a central arcade higher than the others) and two aisles, with a tower at the north-west corner. Internally, however, there is a marked difference in the character of that which may be termed the nave proper and the middle aisle, the former having a central passage leading to an apsidal chancel, whilst in the latter the passage is close to the piers. The organ stands in a short apsidal chancel aisle at the end of the middle aisle. The cost is under 4,000*l.* exclusive of the foundations, and the sittings accommodate nearly 800 persons. Mr. J. P. St. Aubyn was the architect.

SCARCITY OF PAPER.

A REWARD of 1,000*l.* is offered by the proprietors of a well-known newspaper to any one who can suggest a plentiful supply of any product cheap enough to supersede the material from which paper is now made. Without any *arrière pensée*, might I suggest that if a similar reward was offered to our chemists or manufacturers for a plan to reduce paper again to its primitive pulp, and then to discharge from it the printers' ink, the same end would be obtained. The old monks we are well aware destroyed many valuable MSS. for the sake of the parchment upon which they were written. In the present day there are tons of paper stained with productions of an ephemeral nature (returns to Parliament, to wit) which might do duty over and over again, with no loss to the public: on the contrary, there are few persons with even a moderate supply of printed material who would not be happy to contribute to the *paper bleacher*, saving both binding and shelf-room.

W. H. B.

ST. JAMES'S CHURCH, PLYMOUTH.—Mr. J. P. St. Aubyn, Architect.

PRIVATE HALLS AND COLLEGIATE ADDITIONS;

THEIR ARCHITECTURE AND ECCLESIOLOGY.*

THAT the architectural appearance of this university will be greatly affected, both by the additions contemplated by its existing institutions, and the erection of private halls, is very evident. Well considered, and conveniently grouped in their plan, and with their exterior effectively designed, they may add to its well-earned reputation; but let them fail in these important particulars, and we may long regret their erection.

That the object all parties are seeking to obtain—the education of a class of students somewhat below, in point of means, those who now resort here for university distinction—is more likely to be effected by the development of such munificent proposals as those laid before the Chancellor and the Crown by the Societies of St. Mary Magdalene and Christ Church, than by the establishment of private halls, however efficiently projected and administered, we cannot doubt. But that such halls may effect much good, and render much assistance towards the attainment of the same object, is not so extravagant a supposition; for, though independent halls, by reason of the rent, or per centage on the cost of their erection, can never compete with those colleges whose wealth enables them to erect suitable buildings for the reception of such students, without seeking any return for their capital, they may supply a void which will probably remain after the fulfilment of the promised benefactions of the before-mentioned societies. And they may, by adopting similar restrictions to those suggested by the report of the committee of the fellows of St. Mary Magdalene College, satisfactorily compete with the present halls.

If we examine in detail the ecclesiological requirements of these structures, we shall find, I believe, that their cost will not so far raise the annual payment of the student as to present an insuperable bar to their erection.

We shall find that college adjuncts, as well as private halls, with the sole exception of a chapel, will require the same separate arrangements. The committee to which I have before referred, believe it important that the particular adjunct to which their report relates should be a *distinct* part of their college, and that they should not use the same dining-hall, or be under the same officers as the other members of the college; and their own language so forcibly proves the necessity of this separation, that I am induced to quote therefrom. "For," says the report, "a system of strict and rigid economy can hardly be carried out as a part of, or, at least, mixed up with, a system requiring more latitude; because frugality in the poor scholars must be compulsory, not merely encouraged; and it can only add a new difficulty to have such brought into continual and unnecessary contact with a larger rule, and so into temptation; for it is not probable that they would do good to those on a freer system, but rather themselves receive harm. Add to which, the domestic character of supervision, and continual intermixture with, and guidance of, such a class as is an integral part of the idea of such an institution, cannot be carried on, unless all the students be together under the eye of those over them, and not scattered about among others not under such direction.

"Moreover, it is necessary that the meals of all such students should be in common;—in the first place, to relieve the necessity of extra servants, and so to cut off a very positive expense; and, in the second, by stopping all breakfast and other parties in private rooms—absolutely securing them from the various expenses so entailed; add to which, very great regularity of habits is secured by such a system. It would not be well that the existing college hall should be open for the breakfast and tea of part of the members only, for such distinctions are evil; nor, indeed, would the hall hold such a number, in addition to the other residents in college, if their dinner-hour was the same. It is therefore advised, that a dining-hall form part of the quadrangle built for their reception."

It is evident then, that, with the exception of the chapel, and apart from the endowment, such addition to the college would closely assimilate the several parts of a private hall.

We shall not, I believe, find the cost of the addition of a chapel one presenting such an obstacle as shall entirely prevent its erection; yet, if it were such, we have sufficient precedent for the use of a parish church: indeed, I believe that, previous to the fourteenth century, they were generally so employed, and that even such colleges as were then founded had no private chapel. * * * * * *

Several of the extinct halls, we find, were possessed of an oratory, or chapel; and, by reason of this distinction, are designated "important" by Ingram, in his "Memorials."

The first of the new chapels, or oratories, were probably attached buildings, the ground-floor serving some other purpose, as we find the first chapel used by the Society of Brazenose was over the buttery, and those of Lincoln and Exeter had chambers beneath them.

Now, although it cannot but be considered, generally, more desirable that an institution like that under consideration should have a chapel of its own, and that it cannot be *perfect* without it, I can conceive that cases may arise, where it may be very desirable (at least for a time) for the students to worship at the parish church; and I believe no interference with the accommodation of the usual worshippers would arise, as the habits of the parishioners generally are such as to leave sufficient accommodation, at those times when the attendance of the students would be expected: at those other times when the parish church would be filled by the ordinary parishioners, the students would attend the sermon appointed to be preached before the university.

It is obvious that the arrangement of these halls will greatly depend upon the sites which can be procured for their erection, and the number of students the projectors may contemplate providing for. And though the evidence given by the advocates of this system does not contemplate a less number than forty—for which a principal and vice-principal would be required,—I believe that a less number, under the supervision and instruction of the principal alone, may in some cases be desirable. The difficulty of finding a site, for instance, for a hall to accommodate such a number, may, among other circumstances, be a reason for confining the number of students within the scope of the powers of one individual. And as it is obvious that the cost of erection of a suitable building, if arranged according to the same details as are fitted for the larger number, would be too great to be borne, I propose to consider, first, the details, and probable cost of a building for forty students, and then of one for half the number.

The aspect which appears most desirable for a hall like that under contemplation is full south; and as it is necessary, for the perspicuous enforcement of my arguments, that we should have an imaginary site, I will assume that we have one with that desirable aspect, not because we cannot make another *site* suitable, but because others would require different arrangements, and I have adjusted the several parts of my plan in accordance with such an aspect.

The plan of the buildings, I think, should tend to the quadrangular form; not only because that form has become hallowed by ancient association, but also because that seems most convenient for providing access to the several portions of the establishment, and presents great facility of supervision. The south side of the quadrangle I would leave open to the street, because, in its necessarily limited size, it is desirable that every facility for the full admission of the sun's rays should be afforded; but, of course, it will be necessary so to enclose it, that ingress and egress shall be impossible by other than the legitimate portal. Around the other three sides of this quadrangle I consider it desirable that a cloister should be formed, giving a covered approach to the several portions of the building, and forming an ambulatory for the students. It is no argument against this, that the studies of the students would be darkened thereby, as, with the facility we have for the use of glass, wherever requisite, *that* is not at all a necessary consequence.

On the eastern side of this quadrangle I would place the principal's house, the front entrance to which should be in the cloisters, having a private entrance to this cloister from the street.

On the western side should be placed the principal wing for the students' rooms, the cloisters there having a similar, although more important entrance than that provided for the principal—the one being a private door, the other the main entrance to the hall: close to this would be the servants' room—they all in common acting as porter. Immediately above this, on the first floor, would be the vice-principal's apartments; the staircase forming the approach to these, and the upper sets of students' rooms being near this entrance.

On the remaining, or northern side of this quadrangle, I would place the refectory, or hall, with the kitchen and other necessary offices beneath it; while I would place the chapel above the hall, where its position could be plainly marked, and where it might receive the amount of decoration which is recognised as its due. As an approach to the hall and chapel—the floor of the former being raised a few feet—I would erect a small tower, the lower portion containing the staircase, and the upper serving as an extracting shaft for ventilating the building generally, while it might also contain the bell for chapel and the other bells—these being evidently necessary where all meals are to be taken in common, and where bells of different tone seem the only ready way of informing the student it is necessary for him to prepare for, or to attend, the repast then about to be served.

In continuation of these buildings I would place the library; the remainder of this side, and part of the eastern, being completed by the students' rooms, some of which would be over the library.

Assuming the principal to be a married man, I have considered that he would require for his private accommodation a dining-room, a drawing-room, and library, with three or four bedrooms, besides the necessary offices and bedrooms for servants. For the vice-principal I have supposed two rooms and a servants' room would be required; while for the students there would be but one room each, with a recess for a bed: those upon the ground-floor would have access from the cloisters by a lobby to every two, or sometimes three rooms, while those upon the first and second floors would open upon a corridor.

The accommodation for the principal would be treated entirely as separate from the hall, and need not be connected with any system of ventilation which might be adopted. All the students' and other rooms should be erected to admit of thorough ventilation, though whether heating by the hot-water, or other artificial system, would be found to answer, I am not prepared to assume: the system has been tried at St. Augustine's, Canterbury, but I cannot state with what amount of success.

I fear that cases may arise when, from illness or general delicate health, means of warming some of the chambers to a higher temperature than is desirable for the whole of the students, may be necessary; while if the *sans* fireplace system adopted at St. Augustine's were employed, this would be next to impossible. And though there is little difficulty in keeping a room, however large, to nearly an uniform temperature, I have not yet seen a system that will simultaneously insure the distribution of the heating powers to a number of small rooms: I fear some would be intolerably hot, while others would be scarcely temperate; and, with the usual results of a system not entirely under our government, we should find we have the hot rooms, or *vice versâ*, where we least desire them.

The supply of gas and water are also questions which require consideration: the cost of the former would be much less, and if judiciously arranged, would be considerably *safer*, than lamps or candles; while a supply of pure water, from a cistern above the level of the building, to each room, with a drain to carry

* A paper read before the Oxford Society for Promoting the Study of Gothic Architecture, by Mr. E. G. Bruton, Architect. It has been published, with plans, by J. H. Parker, Oxford and London.

away the waste and foul water, would save much labour; and a free supply of this essential would be a great boon to the students.

The arrangement under which I conceive gas might be supplied to the students' rooms would be thus: the main pipe should run along the corridor, or cloister, with taps on the outside to shut off the gas from each chamber; and as the whole might be turned off from the main each night, no danger could arise. It would then be the duty of one of the servants to go round the cloisters and corridors, and turn off the tap outside each chamber, so that the neglect of the student to turn off the gas at his burner would be of no moment, and thus no escape would occur when the gas was again turned on, as it would be the duty of the same servant to see that the taps of the burners were properly adjusted, before the gas was readmitted into the rooms.

Whether heating by means of open fires or by a system of hot-water pipes be adopted for the chambers of the students, I think the hall, chapel, and library should be heated by some such system; both because it is more economical, and open fires, in *large* rooms, do not equably distribute their heat.

Of the arrangements of the library and hall I have little to observe: the latter would be furnished much in the usual manner, save that I do not think a "high table" would be desirable: there might be two tables, running the length of the hall, the principal sitting at the head of one, and the vice-principal at the other, while the senior students would occupy the bottom, and also be placed at such points as may be found convenient.

The approach to the hall, as I have observed, would be by a staircase in the tower, the latter being considered desirable, for the reasons previously stated: the approach to the chapel would then start from that leading to the dining-hall, but would not be continued in the tower, but to the west of it, as the portion of the tower at the level of the chapel floor would serve as a small ante-chapel, or approach to the choir, which would thus be screened off at the arch of the tower, while this might be fitted up for the servants of the college and household of the principal.

We have now to examine the style and cost of this contemplated erection, and we must not fail to remember that it is in *Oxford*, itself famous for its architectural remains, that these buildings are to stand; and it should be our especial care, that nothing incongruous or in bad taste should be allowed to mar the venerable aspect our streets present.

In the erection of an institution so thoroughly English, in one of the most ancient of English cities, I hope there is no necessity to plead for the employment of English architecture, though a mere glance round this city will prove the necessity of such a plea; yet the want of *any* style, or the absence of a knowledge of principles which govern its employment, will be as strongly impressed upon those who examine our modern buildings, as that the style they affect is in bad taste, and totally unfitted for our habits or climate.

And lest I may be considered by some out of place in considering this question here, where the means will be necessarily limited, let me observe, that four walls and a roof, with mere slits for the admission of light, may, if honestly treated, be as worthy the name of architecture as the richest pile we can conceive.

Though I believe that English architecture is the only fit style for the purposes of this age, I feel some difficulty in expressing the exact type I would desire to see employed. I should like to be able to answer, *that of the nineteenth century*, though I fear you would be at a loss to imagine what particular specimen of the chaotic mass of erections the first half of this century has witnessed, I recognise as such; and really I feel unable to point to any. We will then take that style which reached its culminating point at the close of the first half of the fourteenth century, and we will suppose its principles adapted and incorporated with the requirements and appliances of the nineteenth, and try to conceive the ideal which I believe will arise, to mark the closing half of *this* century.

The erection of a building like that under contemplation I believe may be effected for a sum not exceeding 6,000*l*. The site—to allow of a garden or recreation ground—should not be much less than an acre: the value of this it is difficult to estimate, but, assuming that such may be procured at 2,000*l*., if we calculate the rent at 5*l*. per cent. upon the outlay, the charge upon each student for the use of his rooms would be about 10*l*. per year. These rooms may be comfortably furnished for about 20*l*. each, the charge upon which, including something for dilapidation, might be thirty shillings more; but as we must calculate upon providing a fund for the repair of the fabric, for insurance, and other charges, it appears that the student must not be charged less than 12*l*. per annum, or 4*l*. per term (Easter and Act counting as one). This sum, I think, is fully as high as some of the existing institutions charge, but it should be remembered that, if these halls are unendowed, they *must* be made self-supporting.

PROVINCIAL NEWS.

Haxey.—The improvements of the exterior of Haxey Church in former years, says the *Lincolnshire Chronicle*, combined with the additional improvements recently effected in the interior and exterior, in the clock-face, &c. are useful and lasting decorations. The church was re-opened for divine worship on 25th ult.

New Bolingbroke.—St. Peter's Chapel here was consecrated by the Bishop of Lincoln on Thursday in last week. It is in the decorated Gothic style, and built of red and black brick, with stone facings and tiled roof, with a tower and spire, 50 feet high, at the north-east corner. The interior comprises a nave, with north aisle, separated from the body of the chapel by five arches, supported by pillars. The seats are open, as is also the roof, which is of oak. The chancel is furnished with an altar-table and sedilia. The glass in the east and other windows is generally of a neutral tint. The building is 87 feet in length, 39 feet in width across the nave and north aisle, 20 feet in width (including the wall) at the chancel, and will accommodate upwards of 300. The site is on the west side of the main street, between the market-house and the road to Carrington. A parsonage-house, in the same style, has been erected close to the chapel. The total cost of chapel, parsonage-house, &c. has been about 2,600*l*. It has been endowed partly by the Fen Chapels' trustees, aided by Mr. W. Ostler. Mr. Teulon was the architect, and Mr. Andrews, of Stickford, the builder.

Frome.—The foundation-stone of a new church was laid in Vicarage-street by the Marchioness of Bath on Saturday in last week, when the parish church, formerly called St. Peter's, was dedicated (or re-dedicated) to St. John.

Chipping Sodbury.—It has been resolved by the inhabitants of this town to erect a gaswork, at a cost of 1,100*l*.

Cheltenham.—The gas company here are laying down new mains, of 12 to 14 inches diameter, along the principal streets, to supply the increased demand for gas in the town.—The receipts for admission to the Cheltenham Exhibition now average about 20*l*. per day, and it is understood that the exhibition will be kept open for another month. The aggregate receipts to this time are 2,000*l*. and upwards.

Penzance.—On Friday in last week, according to the *Cornish Telegraph*, the foundation-stone of Lariggan new bridge was laid by Mr. Gill, the contractor, under the superintendence of Mr. Matthews, town surveyor. On the foundation-stone being placed, two boys, one from Newlyn and one from Penzance, stood thereon, and proclaimed aloud that they "stood on the foundation-stone of Lariggan Bridge," and wine being handed them, they drank success to the undertaking. It is to be finished in three months.

Llannor.—The old parish church having become very dilapidated, steps were taken some time ago to have it restored; but when the walls and timbers were thoroughly examined, it was decided to pull down the whole building to the foundation, and erect a new church on the site, according to designs furnished by Mr. H. Kennedy, of Bangor. The parishioners have undertaken the carriage of all materials; but the deficiency still amounts to about 200*l*. On 30th ult. the laying of the foundation-stone took place.

Holyhead.—A plan for the construction of a Market-hall, with an Assembly-room above it, has been approved of, and the building will shortly be erected, at the cost of the Hon. W. O. Stanley, M.P.

Sudbury.—The church of St. Peter having undergone alterations and improvements, at a cost of above 800*l*. it was re-opened for divine service on 29th ult.

Birmingham.—From particulars in the local *Journal*, as to the state of the sewerage works, it appears that the river Rea main is constructed from the outlet to a point near the Derby Railway Station, in Lawley-street, a length of 10,000 feet. It is also commenced in Lawley-street and Moseley-street, and will be entirely constructed to the Balsall-heath-road early next year, affording an outlet for the drainage of the whole of the borough south of St. Philip's Church; that the Camp-hill main for the drainage of Deritend and Bordesley, is commenced; that the Hockley Brook main is constructed from the outlet to a point near the Fazeley Canal, Aston-road, a length of 9,500 feet; and that the Blews-street, St. Paul's, and Hagley-road main is commenced. The sewerage is also either wholly or partially completed in numerous streets, forming a total of about nine miles of main sewers, constructed by the order of the council. This, added to the length of sewers constructed by the late commissioners (namely, six miles and four hundred yards), gives a total of fifteen miles four hundred yards of main.

Loughborough.—The drainage works of this town are also progressing, but the nature of the subsoil is said to present difficulties. A fall took place in the cutting leading from High-street and Baxter-gate to Market-place, on Monday in last week, but no other accident occurred, though fears were entertained that two houses which had to be propped and girded would have fallen.

Wellow.—The infant school recently built here has just been opened. The room is an oblong square, built of brick, with a porch covered with flat tiles.

Hulme.—A new church for 800 or 900 persons, and schools for above 400 children, are about to be erected in the Holy Trinity district, Hulme, Manchester, from the designs of Mr. G. Truefitt.

Brampton Bierlow.—The new church in the course of erection in the township of Brampton Bierlow, near Wath-upon-Dearne, according to the *Doncaster Gazette*, is making progress towards completion. It is erected of stone. The total cost of the building and its enclosure is estimated to be about 2,300*l*.; nearly the whole subscribed.

Leeds.—The tower and spire long wanted to St. Matthew's Church, have just been completed. The tower and spire are built in keeping with the church, after designs by Mr. Burleigh. The height from base to summit is 145 feet. The contractor was Mr. Charles Jackman.

Carlisle.—Mr. Rawlinson, who has prepared the plans for the drainage of this city, by volunteering an explanation in the council, as to the factious objections of "the dirty party" there, has succeeded in silencing that party, inasmuch as his vindication was formally acknowledged to be satisfactory by a vote of the council, *nem. con.*

Kirriemuir.—The water-works here are progressing towards completion. The large reservoir is being coated with asphalt. It will hold some 130,000 gallons; "and all," says a local paper, "are now satisfied that there will be abundance of water; even the former opponents of the scheme being loud in its praise, except the more senseless or venomous, who are content to be silent."

THE COLOSSAL STATUE OF BERZELIUS, by Professor Qvarnström, will shortly be cast at Munich. It is very simple and effective.

THE IRON TRADE.

EVER since the quarterly meeting masters constituted the self-elected rulers of this trade, so far as we recollect, their system of working the oracle consisted simply in ignoring all other authority and declaring their will as to prices in each future quarter with reference solely to those they had themselves announced for the preceding quarter. Thus, when the sum they had declared to be the market price of bar iron per ton was 10*l.* and when they wished that price to remain unaltered, their dictum was that it "remains the same." They have now, however, changed this principle; and while endeavouring to induce a belief that they desire prices to "remain the same," have actually declared them at 20s. a ton higher than before! The last prices fixed were—bars, 10*l.*; hoops, 11*l.*; sheets, 12*l.* The new decision is, "that the prices of iron remain the same, namely—bars, 11*l.*; hoops, 12*l.*; sheets, 13*l.*" This masterly equivoque has formed "the subject of much remark," and is pronounced to be "what the trade cannot understand," as well as a cause of "considerable embarrassment." There is not much difficulty in understanding it, however. The more golden side of the Minerva's shield is intended for the masters in the trade; the "same" side (with a difference) for the workmen, who begin to regard this as *their* oracle as well,—at least, while prices are in the *ascendant*. The quarterly meeting masters would willingly second the endeavours of those *inter*-quarterly coadjutors whom they have now so indirectly and so strangely recognised in their present decision, but they have the fear of rising wages, as well as other fears, to counterbalance this inclination. They seem to have been actuated by both of these opposing forces in the somewhat oblique course in which they have run between the two. We much doubt, however, that some clever fellow amongst the puddlers may be induced to look at the *other* side as well as the *same*, of this his Sphinx's riddle. Seriously, it is sad to think that such shifts as this should be resorted to for such purposes. The way was certainly well prepared for a rise in the interregnum; and the talk of 2*l.* has been to some purpose, since it has realized 1*l.* even though out equivocally after all, for such practices are by no means likely to promote that deference and respect of which the quarterly dictum needed so much to have an increase rather than a diminution. As it is, we are glad to see that authorities in the trade itself discountenance the present procedure as "rather a questionable mode" of doing.——An improvement in iron manufacture, under Stirling's patent, has been tested at Birmingham. By this process, it is said, that the worst kinds of pig-iron can be at once converted into good bar iron. The materials used are certain cheap oxides. The chief objection made is that the puddling process is too rapidly effected,—a fact which others attribute simply to the efficacy of the process, and declare to be an admission of its advantage, and not an objection at all.——Another invention, spoken of just now, is an American one, of which we think we have heard before, for the obtainment of wrought-iron direct from the ore, by means of a continuous operation, consisting in exposing the suitably-prepared ore to the action of flames and heated gases upon a series of tables, for the purpose of being deoxydised.

ADVANCES TO BUILDERS.

EXECUTION OF DEEDS.

Owen v. *Mawson*.—In the Queen's Bench, Guildhall, lately, Thomas Owen, a builder at Dalston, sued the defendant, Mawson, described as a gentleman of property, to recover damages for the breach of a covenant in a deed into which the parties had entered in the month of August last. By this deed the plaintiff mortgaged to the defendant certain land known as lot 54 of the Copse-hill Estate, Wimbledon; and the defendant covenanted with the plaintiff to advance him 75*l.* for every 150*l.* he should lay out in buildings on the said land. The defendant pleaded *non est factum*, and it was understood that he was going to rely as a defence upon the fact that he had never signed the deed. Evidence was given on the part of the plaintiff that when the deed was executed by the plaintiff it was delivered to the defendant's solicitor to be executed by the defendant; and, though it never had been signed by the defendant, it appeared from the deed, when produced in court, that it had a seal for the defendant, and a letter was read in which the defendant referred to the deed as made between the plaintiff of the one part and himself (the defendant) of the other part. The plaintiff relied upon this evidence as sufficient proof of the execution of the deed by the defendant, on the authority of the case of Cherry *v.* Heming and another, 4 Ex. 631.

Messrs. Broadbridge, J. B. Shepherd, and H. Laxton, were surveyors for plaintiff; and Mr. M. J. Stuteley, for defendant.

Lord Campbell intimated an opinion that the signature by the defendant, under the circumstances, was not necessary. The seal might well be the defendant's seal, and the letter read recognised the deed. The substantial question was, whether the plaintiff had fulfilled his covenant so as to enable him to call upon the defendant for the payment of the first sum of 75*l.* By the deed the defendant was to pay the plaintiff the sum of 75*l.* when the materials "to be used" on the land were ascertained and stated by the defendant's architect to be of the value of 150*l.* The issue raised on the record was whether the materials "used" on the land amounted to that value. It was proved that materials had been "used" to nearly that amount, and that a large number of old bricks and other materials were ready on the land "to be used;" but a difficulty arose in consequence of the plaintiff not being able to prove that materials of the value of 150*l.* had been actually used on the land, so as to support the affirmative of the issue, which lay on the plaintiff.

Mr. O'Malley, for plaintiff, submitted that, as the bricks and timber had been cleaned and prepared for being worked up, they might be considered as "used," so as to support the issue. At all events, he submitted the record might be amended, so as to decide the substantial question at issue, viz. whether the plaintiff had fulfilled his covenant.

Lord Campbell said he thought that, according to the proper construction of the deed, the materials were to be actually used up before the plaintiff was entitled to payment, and he declined to make any amendment.

Upon this intimation Mr. O'Malley elected to be nonsuited. Plaintiff nonsuited.

*** A correspondent, who directs our attention to this case, says,—"Will you define what is labour? All know it is material in the construction of a building: does it come under the category of 'material' as a valued commodity?" An answer to the abstract question would not touch the case in point, wherein it would of course depend on the wording and intention of the deed.

"SQUEEZING" MONUMENTS.

IN your Journal of last week Mr. J. K. Colling makes some remarks on the injuries he supposes the monuments and other elaborate carvings in Beverley Minster have sustained from the process of "squeezing," or taking moulds of them. Having at different times taken a very extensive series of casts from Beverley Minster, I feel bound in my own defence to offer a few observations in answer to what we may term, in the very mildest language, the *mistaken notions* of Mr. Colling.

The practice of taking casts from rich and minute architectural carvings by the process of "squeezing," or taking an impression in soft clay, is of comparatively recent date. Elaborate moulds in plaster of Paris have for a long time been taken from ancient and modern busts, statues, and other sculpture. The late Mr. Cottingham, the architect, was among the first who appreciated the value of casts of architectural details for the purpose of training workmen into a more intimate knowledge of the peculiarities of the different styles or periods of ecclesiastical architecture: for that purpose he made great efforts, and at much expense procured a very extensive and valuable collection of casts, the advantage of which, either for private or public use, is now generally admitted. The movement has been followed up by the Crystal Palace Company in forming their museums of art, and also by the formation of a school of art, in Cannon-street, Westminster, for the more effectual and careful training of art-workmen. "Squeezing," therefore, has become an occupation of considerable importance, and has engaged the attention of numerous persons throughout the country: of course it must be evident that with those engaged in such employment, it is a matter of deep importance to them to procure perfect casts. Yet I am quite certain that no honourable man would even allow such considerations to interfere with the watchfulness and care required for the safety of the monuments themselves.

The process of casting from ancient monuments, as now practised, is so simple, safe, and efficient, that works of the most minute, elaborate, and delicate description may, in the hands of skilful and competent persons, be taken without the least possibility of danger. I say this with the most perfect confidence, having within the last ten years taken, with my own hands, and with the assistance of workmen trained by myself, casts from some of the most elaborate examples of mediæval art in York, Lincoln, and Beverley Minsters; from St. Mary's, Beverley; St. Margaret's, York; Hedon, Patrington, Howden, Walsingham, Birken, and other churches, all of which casts I will venture to declare were taken without any injury whatever to the originals.

I can account for the clay that Mr. Colling found in the works at Beverley Minster in this manner. It has been the custom for a long time past for some of the persons about the minster to supply rough "squeezes" of the details of the various carvings to those who applied for them. These "squeezes" were taken by impressing a large piece of clay upon the part, and then drawing it away, and filling up the hollow clay mould with plaster of Paris. And the persons so engaged in taking these casts have not always been careful to remove the clay out of the deeper part. On one occasion I was myself accused of not sufficiently cleaning the object after casting; but on accompanying one of the churchwardens of the minster to inspect the same, the clay complained of was found to be quite damp and soft, and had evidently been recently placed there, whereas the works performed by me had been finished several months before.

One of Mr. Colling's statements I am disposed to receive with very great caution. He observes that he *constantly* found portions of the carving embedded with the clay in the deeper parts. Now, I can scarcely credit this: I know the minute and delicate portions of all the several exquisite monuments and niches in Beverley Minster well; and I know at the same time that they are wrought with great minuteness and delicacy. Yet they are very strong, and will in all cases bear a very great deal more pressure than is ever applied to them by persons "squeezing" them with clay.

I also have often had to remove clay out of the deeper parts before casting, but *never* have I in any instance found the most minute portion of the stone carving.

The stone of which the "Percy Shrine," in Beverley Minster, is composed, is a very fine, close, hard magnezian limestone, called Tadcaster stone, which appears to have been selected with great care, and is as hard and strong as fine statuary marble: wherever any delicate undercutting occurs, it is always carefully supported by the adjacent part, as I have often had occasion to remark; and from the quality of the stone, and the construction of the parts, I am convinced that a cast may be made of its most delicate portions without the least possible injury.

My own impression and firm conviction is, that there is not the *slightest* foundation for the apprehension entertained by the churchwardens.

All who have paid the least attention to the history of Ecclesiastical architecture in this country know that our ancient monuments suffered greatly at the Reformation, and also at the great rebellion, when men used to express their zeal to God, and the cause of religion, by defacing and destroying the monuments, shrines, and rich tabernacle work of a former age during these times. Beverley Minster must have suffered with other similar buildings; and as most of the mutilations have evidently been caused by very violent operations, I am convinced they may be attributed to these periods; and when we also take into consideration the accidents and casualties which would arise during a period of five centuries, it certainly seems very wonderful that the "Percy Shrine" should be in such a perfect state of preservation as it now is.

Mr. Colling's suggestion of making a model on the spot would be quite unsuitable for the object which the Crystal Palace Company have in view, as no drawing or model, however careful or elaborate, can supply the place of a fac-simile of the original for the purposes of art-education.

Hull. WM. DAY KEYWORTH.

INK SPOTS IN WOOD.—I see in last week's *Builder* a method to extract ink spots out of wood: I use spirit of salt (muriatic acid). To revive the colour, if drawn out, apply raw linseed oil with alkanet root steeped in it.—T. G.

BUILDINGS IN SIBERIA.

Two volumes of "Travels in Siberia," by Mr. S. S. Hill, recently published by Longman and Co. contain an account of two monuments of such interest, that I have ventured an abridgement, thinking that you may deem them worthy a place in your columns, especially at this period when facts connected with Russia are of more than usual interest. The volumes are not only replete with interesting descriptions of the manners of the people, but also of the physical geography of Siberia, and of scientific observations of much value; extending as they did, from "Moscow through Asiatic Russia to the sea of Ochotsk and Kamschatka." Near the important town of Kayan, in Russia, on the left bank of the Volga, stands a monument to commemorate the victory of Ivan IV. over the Tatars, and the triumph of the Russians over their ancient enemies, which followed upon the fall of Kazan. It consists of a pyramidal building, though not constructed exactly after the plan of those from which the name of this form of mausoleum is derived. It terminates in a flat summit about a fifth or sixth of its height from the point at which the angles would have met to form its apex had it been in the figure of a perfect pyramid.

The character of the building, indeed, is further raised from that of the true pyramid, by four elegant porticoes, with sculptured devices over them, apparently representing scorpions, and beneath every one of them is three doors. The monument was erected about twenty-five years ago. It is surrounded with iron rails, with stone supports, and its pyramidal portion rests upon a solid base of stone, which is ascended by steps at its four sides.

The door beneath one of the porticoes conducts into a small chapel, plainly and appropriately decorated: beneath this is the depository of the mouldering remains of the heroes departed. In the centre is a sarcophagus containing the remains of that more enduring portion of bodily substance which "*some suppose the soul's frail dwelling-house.*" At Krasnoyarsk, on the banks of the Teneseisk river, in Siberia, situate 56° 93′ east long. and containing a population of nearly 6,000, is a cathedral church, which, in 1848, when Mr. Hill visited the place, was nearly completed. Gaspodin (Mr.) Dentu, whose family were of French extraction, but who have been long settled in Russia, was appointed by the Government the architect. Mr. Hill states that "it is a noble edifice, of such dimensions and architectural beauty, as to strike all who behold it with wonder at seeing so grand an edifice in the midst of so scanty a population."

The length is 187 English feet by 96 feet broad, "*without taking in the projections, which form at least the similitude of the Greek cross,*" but which are not in this instance undue, or sufficient to break all harmony in the design, in the same degree which is observed in the greater part of the Russian churches. The height of the tower in front of the building is 198 feet, and that of the dome 182 feet. It has three great entrances, and the socle is of cut stone, and 10 feet in height, and forms a base of great stability to the building."

The origin of this cathedral is worthy of notice, and would be striking if it had arisen in a more refined country than the cold clime of Siberia.

A large number of the proprietors of the mines in the neighbourhood of Krasnoyarsk had assembled to celebrate the birth of the present heir apparent to the throne of the Czar, when great luxury was displayed. One of the proprietors, in comparing the state of many there present with what it was when they first entered Siberia, with nothing beyond the spirit of enterprise and adventure, suggested that in testimony of their gratitude to Almighty God for the riches he had vouchsafed to them, a temple should be raised, and dedicated to St. Nicholas, in honour of the new-born infant. The proposition met with universal approbation, and a subscription was entered into, and 60,000*l.* raised, of which sum 24,000*l.* were at once put down.

O. H.

Miscellanea.

BATTERSEA-PARK.—On a vote of 25,500*l.* being called for from the Commons, towards the cost of forming Battersea-park, a long discussion ensued on metropolitan improvements in general, and the sources whence they ought to be derived. Lord R. Grosvenor complained that while the Government disclaimed all trusteeship in the matter, no other authority was appointed to carry out improvements which were much needed for the health and recreation of the community. His lordship particularly referred to a subject we have often brought under notice,—the gradual extinction of all open spaces. The state of the sewerage and water questions also was particularly instanced. Mr. Hastie, misunderstanding Lord R. Grosvenor's remarks, objected to metropolitan improvements coming out of the public purse. Glasgow had just expended 90,000*l.* for public parks, and Government gave no aid whatever. The metropolis should pay for its own improvements. Lord R. Grosvenor afterwards explained that what he desired was some organized means of effecting this very object. The vote for Battersea-park was objected to by several members, but Sir W. Molesworth explained that a motion made against it, if carried, would lead to a positive loss in the public funds, as engagements would be broken, and sources of future profit on public property destroyed. The money was wanted for the completion of the park in the purchase of land, &c. The area of the park would be open to the public by Michælmas. The vote was ultimately agreed to, as also one for 35,000*l.* for the Thames embankment and roadway between Battersea and Vauxhall bridges, and approach from Sloane-street to Chelsea-bridge.

RAILWAY MATTERS.—The traffic returns of railways in the United Kingdom for the week ending July 1, amounted to 383,748*l.* and for the corresponding week of last year to 347,079*l.* showing an increase of 36,669*l.* The gross receipts of the eight railways having their termini in the metropolis amounted for the week ending as above, to 177,741*l.* and for the corresponding week of last year to 160,985*l.* showing an increase of 16,756*l.* The increase on the Eastern Counties Railway amounted to 1,846*l.*, on the Great Northern to 2,410*l.*; on the Great Western to 1,732*l.*; on the London and North-Western to 3,134*l.*; on the London and Blackwall to 131*l.*; on the London, Brighton, and South Coast to 4,471*l.*; on the London and South-Western to 2,196*l.*; and on the South-Eastern to 836*l.*——The erection of tubular and other iron bridges across the streets and thoroughfares in Birmingham, is exciting displeasure from the serious accidents to which the noise of trains passing along them give rise by the frightening of horses. They have been complained of as a nuisance, but notwithstanding, a new one has been recently thrown across Great Charles-street, and a memorial to the Board of Trade is being got up to put them down.——The Clay Cross Company, in addition to a large number of cottages already erected, have just entered into a contract, amounting to about 5,000*l.* with Mr. Heath, of Chesterfield, builder, for the erection of forty dwellings of a superior kind, for the accommodation of their workmen.——A machine has been constructed by Mr Luther Whitman, of Winthrop (U.S.), for "siding," or sawing a slab from each side of a railway sleeper, by horse-power. The saw is a circular one, to which is attached a sliding carriage on which the sleeper is placed. this is made fast by a "dog" at each end, so constructed, that when one side is sawed the sleeper can be turned over without unclinching the "dogs," and the other side put through the same operation. The apparatus is portable, and costs between two and three hundred dollars.

SOCIETY FOR IMPROVING CONDITION OF LABOURING CLASSES.—The tenth annual meeting of this society was lately held in Freemason's Tavern, the Earl of Shaftesbury in the chair, when the usual report was read, which stated that "the most remarkable and most gratifying feature of the past year has been the increasing fruits of the society's past labours, even while, from various circumstances, the society itself was unable to proceed further in the same course. In sixty-four parishes there were devoted to cottage allotments no fewer than 332 acres, furnishing allotments to 1,784 cottages. The model lodging-houses at Shadwell and Saffron Walden have been completed, and are partly occupied. At Blaina Iron-works, South Wales; in Bloomsbury, and in Camden-town, and other places, various lodging-houses have been built for the accommodation of the workmen, all showing the advantages dispensed by this society." The chairman and Lord Ebrington alluded to the influence of the society's proceedings abroad, similar societies having sprung up on the continent and in America, so that numerous improved dwellings had been raised in France, Germany, Italy, and the United States, and lately a Spanish architect had applied for information on the subject.

LIVERPOOL TIMBER MARKET.—From Quebec two cargoes of timber and one of deals arrived last week. The former, imported by dealers, is likely to be retailed from the quay—the latter sold at 14*l.* 5s. for seconds, 12*l.* 5s. per standard for thirds pine. From the lower ports a few cargoes have entered. St. John deals of good quality have realised 12*l.* per standard by the cargo. One large cargo, St. John, imported by a firm in the trade, has also come in during the week. From the United States a few parcels of pitch pine have arrived. The last sale made of this article, for arrival, was 2s. 6¾d. per foot, for a good parcel of about 300 logs, Savannah wood. There were no arrivals from the north of Europe last week.

THE WORKMEN'S NIGHT AT ARCHITECTURAL MUSEUM.—Dear Mr. Editor: I am going to complain to you, hearing that you always take the part of the ladies, and feel sure you will read my note (though not written on pink paper). I paid a visit last Thursday evening to the Architectural Museum, Canon-row, Westminster, and was highly delighted with the carving and sculpture, but more especially with the beautiful collection of casts taken from natural leaves. Of course it will be still more interesting when the catalogue is published. But the first words we heard on entering the room were these: "What! ladies come to a place of this kind? I am sure they will find nothing here to amuse them." Now I contend that ladies do not always go to public places with the entire view of being amused only, but also to gather instruction. I see no reason why they should not obtain as much information as they can on so pleasing a study as architecture. The speeches alone were sufficient of themselves to afford amusement to any lady with the slightest intellect, especially those delivered by the Rev. Mr. Ruter and Sir Charles Barry, and others, not forgetting the chairman, who commenced very tamely, but ended most enthusiastically amidst applause. After the conclusion, of course the chairman, the committee, and artizans, were thanked, with those who spoke, and *those who did not*; also every gentleman in the room, for the great kindness they manifested in coming out on such a wet evening; in fact, *all were thanked* excepting the *ladies*; of *them* no notice was taken, not so much as to offer them seats, which, considering the state of the stairs they had to mount, would have been but polite—each step having a puddle large enough to drown a moderate size kitten, beside the pleasant smell arising from damp clothes, added to the difficulty of finding the Museum, owing to the address being placed on the wrong street.—MINNIE.

BIRMINGHAM SCHOOL OF ART.—The annual meeting of donors and subscribers to the Government School of Art, at Birmingham, was held at the rooms of the local Society of Arts, in New-street, on Tuesday in last week, Lord Leigh in the chair, when the usual report was read and prizes distributed. The chairman stated in his address that while in 1843 there were only eighty-four pupils, now there were 782 students upon the books, and the masters instructed 347 persons in other schools connected with that institution, making a total of 1,129 pupils. A number of young persons who had left King Edward's School were rapidly progressing in the higher classes of instruction. The benefits of the school were also extended to female students, eighty of whom were now learning drawing. The accounts showed a balance in hand at last audit of 269*l.* 7s. 6d. The sum received last year for students' fees was 408*l.* 4s. 5d.; fees from the Governors of King Edward's School, 150*l.*; ground-rents, 19*l.* 7s. 4d.; donations and subscriptions, 219*l.* 10s.: total, 1,066*l.* 9s. 3d. The expenditure reduced the balance to 164*l.* 14s. 10d.

STOURBRIDGE SANITARY ASSOCIATION.—A brief address to the inhabitants of Stourbridge has been issued by this association, urging the necessity of cleansing the town, and bringing under notice the fact that many preventible deaths occur from fever and other diseases prevailing in the dirtiest and closest districts of it. This association at present merely represents the existence of nuisances to the proper authorities, and endeavours to disseminate sound information through lectures, papers, &c. regarding the various causes which affect health and life in towns, but the members hope to extend its operations. They thankfully receive donations of books on sanitary subjects, models, &c. Their praiseworthy exertions cannot but benefit the community to whom they belong.

USE OF PHOTOGRAPHY IN THE ARTS.—Some of the Sheffield trades, the local *Independent* suggests, are of such a character as might derive great advantages from the photographic art; businesses which require copies of designs or exact representations of manufactured goods, which could be best and most readily furnished by photography. In the soft goods trade, we believe, this art has already been put to use, in reference to designs and patterns. A knowledge of its manipulations would be useful to manufacturing designers.

EXCURSION OF THE LIVERPOOL ARCHITECTURAL SOCIETY.—The members of this society made their annual excursion on Saturday in last week, when they visited Whalley, for the purpose of inspecting the ruins of the abbey, the old church, and the ancient grosses in the churchyard; also Little Mytton Church and Hall. At the latter place they were entertained by Capt. Yates. The church has undergone so many modifications by repairs and so-called improvements, as to leave little that is interesting to the antiquary. The party then returned to Whalley, where they were met by the vicar, the Rev. Mr. Whitaker, son of Dr. Whitaker, the historian of Whalley, and conducted over the ruins. An inspection of the church, which is at present under repair, also took place; and the whole party adjourned at three o'clock to dinner at the Whalley Arms, where Mr. John Hay presided.

AN IRISH NATIONAL GALLERY. — In the July number of the "Journal of Industrial Progress," published by Simpkin and Marshall, we find it stated in an article on "An Irish National Gallery," that the money raised by subscription to erect a public monument to Mr. Dargan, is to go towards the erection of a national gallery for Ireland, when reinforced by farther subscriptions, and if possible by a Government grant, which Ireland is surely as well entitled to as Scotland. The amount of the subscription already made does not exceed about 5,000*l.* and at least double that sum, it is estimated, will be requisite for the building itself. Already there are not a few offers or promises of works of art for the gallery.

THE WORCESTER ASSOCIATION FOR ERECTION OF WORKING-CLASS DWELLINGS.—A royal charter of incorporation, we hear, has been granted to this association. The liability of the shareholders will thus be limited to the amount of their respective shares. The society is now in a position to commence work.

ARCHITECTURE IN THE PARIS EXHIBITION OF 1855.—A meeting will be held on Monday evening next, the 17th instant, at the Institute of British Architects, to receive statements from Messrs. Pockerell, Donaldson, and Scott, the committee for Architecture, appointed by the Board of Trade, in reference to the Universal Exhibition in Paris, in 1855, and to consider the steps to be taken by the profession, to secure on this occasion an adequate and efficient representation of the art. It is of importance that exertions should be made to do justice to the profession, now for the first time brought into competition with the most distinguished men of all nations.

THE PRESTON STRIKE.—The committee of the Masters' Defence Fund have just issued their report, from which it appears that the total loss to the community by the Preston strike was 533,250*l.*—a pretty considerable sum, seeing that this is the only result of the strike.

TENDERS

For the Alterations and Enlargement of Surbiton Church, Kingston, Surrey. Mr. P. C. Hardwick, architect. Tower and spire not included in this estimate. The old material to be used as far as approved by architect.

MESSRS. RODGERS and STYRING, of SHEFFIELD beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the

DECORATION OF CHURCHES, MANSIONS, PUBLIC BUILDINGS, &c

in the most correct style of Art, from Designs, and under the direction of H TAYLOR BULMER, Esq, of Shrewsbury Bank whose works may be seen at St Barnabas Church Pimlico, St Mark's, Fann street, Berkeley square, London, the great Hall of the Sheffield Mechanics' Institute; and numerous other works in town and country.

MESSRS. GALLI and COTTI, Ornamental Designers and Decorative Painters have the honour to acquaint the nobility, gentry, and architects that they undertake the decoration of all kinds of buildings, both public and private. Having had great practice in executing ornamental painting in the various materials of oil, fresco, distemper, encaustic, &c they are enabled to produce their work with despatch and economy. Messrs. G. and C. who obtained a medal at the Great Exhibition of 1851, have much pleasure in referring to work executed by them in London and the provinces.—Studio at 44, Frith-street, Soho-square. Hours from Ten till Four.

S COTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Instituted 1831.
PRESIDENT.
His Grace the Duke of Buccleuch and Queensberry, K.G.
MANAGER—Robert Christie, Esq.
SECRETARY—William Finlay, Esq.
Head Office—26, St. Andrew-square, Edinburgh.

The Twenty-third Annual General Meeting of this Society was held at Edinburgh on 2nd May, 1854; William Stuart Walker, Esq. of Bowland, in the Chair.

The Report read to the Meeting, and which was unanimously approved of, contained the following particulars:—

The number of Policies issued during the year ending 1st March is 720, the Sums Assured thereby being 286,715l. giving an addition to the Income in Annual Premiums of 8,53d.

The Policies lapsed by death during the year are eighty-four, the Sums Assured by which amount to 49,850l. and the Bonus Additions to 8,482l. making together 58,332l.

In comparing these sums with the amounts for the preceding year, they exhibit an increase of seventeen in the number of new Policies, and of about 6,000l. in the Sums Assured. The increase, though of moderate amount, must be considered satisfactory, especially when regard is had to the great competition which now exists in the business of Life Assurance.

The number of Policies lapsed by death is four under that of last year, and the amount payable nearly 7,000l. less. Keeping in view the additions made to the business, and the increased age of the members of the Society, these are most gratifying circumstances.

The Sums remaining Assured amount to 4,234,538l.;
The Annual Revenue amounts to 152,615;
And the Accumulated Fund is increased to 839,354l.
*** Medical Referees paid by the Society.

VIEW OF THE PROGRESS AND SITUATION OF THE SOCIETY.

	Amount Assured.	Annual Revenue.	Accumulated Fund.
At 1st March, 1836....	£642,871	£21,916	£40,974
Do. 1843....	1,685,067	61,851	191,496
Do. 1848....	2,984,878	110,705	419,673
Do. 1854....	4,234,538	152,615	839,354

POLICIES RENDERED INDISPUTABLE.

By a Resolution of the Society, Policies may, after being of five years' endurance, be declared indisputable on any ground whatever, and the Assured be entitled to travel or reside beyond the limits of Europe, without payment of Extra Premium for such travelling or residence. Special application must be made to the Directors for such privilege, however, and satisfactory evidence adduced that, at the time of his application, the Assured has no prospect or intention of going beyond the limits of Europe.

The Amount of Claims paid to the Representatives of deceased Members exceeds

SIX HUNDRED THOUSAND POUNDS.

Copies of the Reports, Proposals, and all other information may be had on application to the Head Office in Edinburgh, to any of the Country Agents, and to the London agency, 126, Bishopsgate-street.

WILLIAM COOK, Agent.

London, June, 1854.

M ONEY on LOAN, at 3½ per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or trade rs resident within the City and Liberty of Westminster, that is to say within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to bear interest after the rate of 5l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

L OANS.—Persons desirous of obtaining ADVANCES, from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES—Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 1s. per 25.
CHARLES JAMES THICKE, Resident Secretary.

B RITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASS, No. 44.—The Committee of Management of this Class hereby give notice, that having received numerous applications from members and others for shares in this class, they have agreed to issue a limited number of additional shares to investors, at a premium of 1l. per share beyond the entrance-fee which premium will be carried to the dividend fund of the class). Application for the new shares to be addressed to the Secretary, with the back subscriptions, entrance-fee, and premium, on or before the Sixth Subscription Meeting of the Class, on FRIDAY, 11th AUGUST next. A discount of 4l. 4s. will be allowed upon shares then fully paid up.—By order,
CHARLES JAMES THICKE, Secretary to the Class.
17, New Bridge-street, Blackfriars, July 15, 1854.

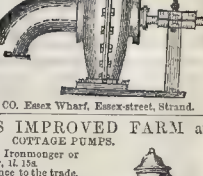
B RITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES, 17, New Bridge-street, Blackfriars.—The ANNIVERSARY DINNER of the Members of these Classes will take place on TUESDAY, 15th AUGUST next, at ROSHERVILLE. Arrangements as heretofore. Members desirous of being present will please intimate their wish by letter, addressed to "Stewards," at the British Mutual Life Office, 17, New Bridge-street, Blackfriars, on or before TUESDAY, 8th AUGUST next.—By order,
CHARLES JAMES THICKE.
17, New Bridge-street, Blackfriars, 10th July, 1854.

G UTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road, London.

PRIZE MEDAL, CLASS 22.
H IGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.



Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.
H IGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE CUCK is recommended as a Cock free from leakage, applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

C ENTRIFUGAL PUMPS.

Dry Hair Felt, for covering boilers, steam pipes, &c. which effects a saving of 33 per cent. of fuel. Prices according to thickness.
All particulars and samples furnished by J. M'COLLOUGH and CO. 34, Lime-street, City.

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves Cisterns and every description of Slab work, Tuferns, Sinks, Slate Tanks, with plate-glass sides, fr fish zoophites, &c. and every description of Slab work wrought and fixed on the shortest notice: 1½ inch Slate Paving in rubs, planed on one side, and squared, fitted to lay, warranted stronger than 3 inch York. 5d. per foot super —Baltic Wharf, Commercial-road, Lambeth.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Herefordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Brabyn, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as he continues TO AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing Room Chimney Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Vera Antique, Brocatella, Dove, St Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

ORNAMENTAL CHIMNEY-POTS.—More than 100 patterns of the above-mentioned articles are manufactured in artificial stone by J. SEELEY, at Austin and Seeley's Artificial Stone Works, 1 to 4, Keppel-row, New road.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.
PRICE 7s. 6d. each,
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

CLOSETS WITHOUT THE COMPLICATION OF CRANKS AND WIRES

WERE FIRST INTRODUCED BY GEORGE JENNINGS IN 1848.

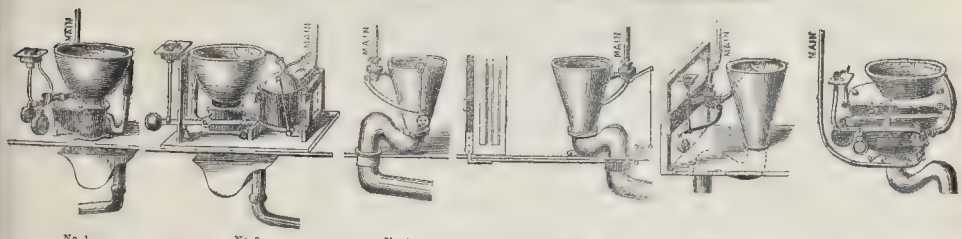
That the arrangement was good is proved by other Manufacturers finding it answer their purpose to advertise that they NOW manufacture Closets without Cranks and Wires

GEORGE JENNINGS respectfully calls the attention of Architects and Engineers to his

CLOSETS, URINALS, AND LAVATORIES FIXED THROUGHOUT THE CRYSTAL PALACE.

JENNINGS'S DRAIN-PIPES.

The Patentee has made such arrangements, that in a few weeks he will be enabled to supply any quantities and sizes up to 3 feet to order.



A Sample Closet, with Stool Cock complete, packed and sent to any part, on receipt of a Post-office Order for 3s.
A Book, containing Illustrations, Descriptions, and Prices of JENNINGS'S HIGH-PRESSURE BIB, BALL, and STOP COCKS, SLUICE VALVES, and FIRE COCKS URINALS LAVATORIES, PUMPS of all kinds, FOUNTAIN JETS, GULLY TRAPS for STREETS, STABLES, or SINKS, &c. &c. can be had on application, or by post if two postage stamps are inclosed to

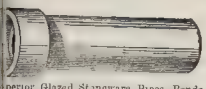
GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
No. 29, Great Charlotte-street, Blackfriars-road, London.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON

No. 1. No. 2. No. 4. No. 5. No. 6 No. 3.



THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 2l. 4s.
No 2. J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE CLOSET, WITH PATENT "SERVICE BOX" ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 2l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2l. 12s. 6d. With Blue Basin and sunk opal handle, 2l. 3s. extra, 4s. 6d.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect
R. S. HOGGARD, Engineer.

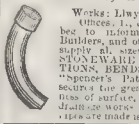
Royal Arsenal, Woolwich, June 24, 1853

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several used here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, LION POTTERY, No. 14,
VAUXHALL WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c &c Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders decomposition thereof impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rusher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Hurst's Wharf, No. 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—D. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

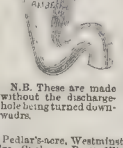
HAYES, BROUGH, and CO.

Works: Llwyncelyn, near Wrexham.
Offices, 1, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these wares are made is of first-rate quality.

J. TURNER, Pottery, 2, South Wharf,

Praed-street, Paddington.

Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for strength and elegance. Drawings and list of prices will be sent free on application.



LMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 33, HIGH-STREET, LAMBETH, LONDON. Established 1751

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior ware, far surpassing any other manufactured of Earthenware Stone Ware.

may be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Ahead, Bermondsey, Danver's Wharf, foot of Batter-sea-bridge, Chelsea; Pratt Wharf, Kingsroad, Camden New Town, WINNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD 178, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

MILL WALL POTTERY (near Scott

Russell's)—Messrs. WILLCOX and Co. avail themselves of this opportunity to inform Builders and Architects of their extensive assortment of articles in White EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

ADVERTISEMENTS.

TO THE MAGISTRATES OF THE COUNTY OF MIDDLESEX.

MY LORDS AND GENTLEMEN,—In consequence of a vacancy having occurred by the death of Mr. J. C. Christopher, Surveyor of the district of Hammersmith, I am induced to present myself to your notice, and respectfully to solicit the favour of your appointment to the office.

I shall have the honour to lay before you copies of my testimonials, which I trust will prove satisfactory and insure your patronage on this occasion.

I have honour to be, my Lords and Gentlemen,
Your most obedient humble servant,
JOHN TURNER.

8, Arabella row, Grosvenor-place, July 19, 1854.

TO HER MAJESTY'S JUSTICES of the PEACE for THE COUNTY of MIDDLESEX.

MY LORDS AND GENTLEMEN,—Owing to the lamented and untimely death of my esteemed partner, Mr. Christopher, with whom I have been connected for the last fifteen years, a vacancy has occurred in the District Surveyorship of Hammersmith, and I beg respectfully to inform you that it is my intention of canvassing for the appointment, and to solicit the favour of your votes and interest in my behalf.

I may remark that my position as partner of the deceased has rendered me familiar with much of the working of the Metropolitan Building Act, which, added to the testimonials which I shall have the pleasure of laying before you, will, I hope, prove my fitness to fill the office which I now seek at your hands. Should I succeed in being elected, I promise to devote my best energies and attention to its duties, and study to merit your approbation with the same earnestness which distinguished my late partner, Mr Christopher.

I have the honour to be, my Lords and Gentlemen,
Your most obedient servant,
ROBERT GARLAND.

Thames chambers, Adelphi, July 19, 1854.

TO the Worshipful the MAGISTRATES of the COUNTY of MIDDLESEX.

MY LORDS AND GENTLEMEN, — The District Surveyorship of Hammersmith becoming vacant by the melancholy fate of Mr. Christopher), I beg to offer myself a candidate for that appointment, and having on the last occasion been placed by your favour next on the poll to the successful candidate, I hope on the present one by the continuance of your support to secure my election. Intending to canvass no person personally, and to forward my testimonials for your consideration,

I have the honour to remain, my Lords and Gentlemen, your most obedient servant,
JAMES THOMSON.

July 17, 1854.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed Tenders will be received at the Ordnance Office, Pall-mall, London, on or before the 26th day of JULY, 1854, from persons desirous of Contracting with the Honourable Board of Ordnance for the undermentioned Works and Repairs at the WESTERN HEIGHTS BARRACKS, Dover :—

SERVICE No. 1.—Enlarging the Artificers' room and constructing a Platform at the Mess Establishment.

SERVICE No. 2.—Renewing Joists and Boarded Floors to Four of the Soldiers' Rooms, and New Steps and Risers to Nos. 3 and 7 Houses.

SERVICE No. 3.—Constructing Two Retaining Stores and a Serjeants' Mess-room under the Ground Floor of the Upper Range of Soldiers' Barracks.

Plans and specifications of the Works may be seen, and forms of Tender obtained, at the ROYAL ENGINEER OFFICE, Dover, between the hours of TEN and FOUR o'Clock, from the 6th to the 24th JULY, 1854, Sundays excepted.

The Party who's Tender may be accepted for the Works, will be required to enter into a bond, with two eligible securities, jointly and severally, to be bound under penalty of 50l. for the due performance of the Contract.

Tenders for the above Works to be addressed to the "Secretary to the Board of Ordnance Ordnance Office, Pall-mall, London, and endorsed "Tender for Works at the Western Heights Barracks, Dover."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 3rd, 1854.

METROPOLITAN COMMISSION of SEWERS. To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY the 8th day of AUGUST, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING with a certain intended BRICK SEWER, 12 inches in length, or thereabouts, of the respective sizes of 9 feet 6 inches by 9 feet, and 8 feet 6 inches by 8 feet in the clear, with other works in connection therewith, to commence at a point near Cremorne-gardens, Chelsea, and thence proceed to Kings-road, Richmond road, Warwick-road, and the Uxbridge-road, in the respective parishes of Saint Luke, Chelsea, Hanover-square, St. Mary Abbots, Kensington, in the county of Middlesex, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and specification of the above works together with the form of Tender, may be inspected, and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 25th day of AUGUST. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

Staveley Works, near Chesterfield, 19th July, 1854.

MARYLEBONE ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES. Incorporated by Royal Charter, limiting the liability of the shareholders to the amount of their respective shares.
Capital, 100,000l. in 4,000 shares of 25l. each.

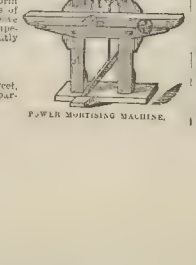
DIRECTORS.

Chairman.—Joseph Grote, esq.

R. J. Bazalgette, esq. — S. H. Harlowe, esq.
F. Bridgman, esq. — Charles Heberden, esq.
R. F. Bromehead, esq. — Mr. George Pollard.
Sir E. N. Buxton, bart. — Lieut.-Colonel C. Stuart, M.P.
John Cunliffe, esq. — G. Spencer Smith, esq.
Frederick George, esq. — Josh. Wm. Throupp, esq.
W. G. H. Hersheon, esq.

HONORARY ARCHITECT.—W. G. Habershon, esq.
AUDITORS.—John O. Hanson, esq.; Thomas Hunt, esq.
BANKERS.—Sir Samuel Scott Lucy, and Co.
SECRETARY.—Mr. Charles Rooper Stoke.

The object of this Association is to take on lease or purchase such property in the parish of St. Marylebone as can be obtained, with the view of providing for the industrious classes, well drained, ventilated, and cleanly habitations at as low a rate as shall be remunerative; and it is confidently expected that this beneficial object can be carried out, and a fair rate of interest returned to the shareholders on the capital invested.
Shares to an amount exceeding 12,000l. have been already subscribed for and the first call of 2l. per share is paid up.
Applications for shares may be made to the Secretary, 28, Dorset-street, Portman-square where prospectuses, forms of application, and every information relative to the Association can be obtained, or the list of shares for inspection.



LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
1, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinet makers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and CO.'s, Watling-street, City, and see in action the very small, powerful, and expeditious machine, which is the only one yet brought out, for performing these separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the other mortising machines introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co. having also had the unqualified approval of practical men, is most highly recommended for the best fencing for park and farm enclosures, or subdivisions for temporary agricultural enclosures instead of any kind of hurdles), for road-side and all other fencing.
The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. (after the model of the fences of this material in the slopes and Home park, at Windsor), has the inherent property of remaining equally tight and rigid, under any variations of temperature.
N.B. Estimates given at so much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.
OFFICES.—Gateshead-on-Tyne.
1 or, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines, both by the great Exhibition in London, and many scientific Institutions in Europe, and are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, merchants, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, sawing, rebating, sawing and turning.
Their operations are in every respect perfect, either in hard or soft wood, and will execute all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

POWER MORTISING MACHINE.

Sold only by
WILLIAM FURNESS,
Inventor, No. 29, Hawke-street, Liverpool, from whom full particulars may be obtained.

THE SMOKE-CONSUMING STOVE invented by Dr. ARNOTT and exhibited by him at the Society of Arts on Wednesday, MAY the 10th, insures perfect combustion economises fuel improves ventilation, requires much less attention than the ordinary stoves in general use, is manufactured by D. and E. BAILEY, 271 and 272, High-st. who are prepared to supply new, or adapt old stoves to the principle.

THE SMOKE PREVENTION COMPANY, 19, CHARING-CROSS. PRIDEAUX'S SELF-CLOSING VALVES applicable to every description of furnace. Extensive experience has shown the action of these valves to be so perfect as to leave nothing to be desired. Not only do they entirely prevent smoke, but they do so with benefit to the action of the furnace in every point of view, boiling coppers, heated ovens, or getting up steam quicker, and saving from 10 to 15 per cent. of fuel. In no instance have the Company ever received a complaint of having impaired the action of a furnace.
N.B. One year's saving of fuel accepted, in lieu of any payment for royalty.

THE SMOKE PREVENTION COMPANY, 19, CHARING-CROSS. PRIDEAUX'S SELF-CLOSING VALVES applicable to every description of furnace. Parties who are dissatisfied with the imperfect prevention of smoke, waste of fuel, diminution of steam, or delay in any heating process, caused by this Prideaux-scheme, may obtain reference at the Office of the Company, which will enable them to satisfy themselves of the sterling character, and great value of this invention.
N.B. The Valve has proved itself as admirably adapted for brewers' coppers and bakers' ovens, as for steam-boilers. A month's trial allowed.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus.—Gas-works erected complete.—Any of the various parts of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms.—Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Side Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.
JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Ties, Bars, Chain, Sheeting, Socket Pipes, Rain water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

SAW-MILL MANUFACTORY, Chelsea, London. WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

THE PATENT GALVANIZED IRON, TUPPER and CARR, Owners of Crawford's Patents, and Successors to THE GALVANIZED IRON COMPANY, Supply Patent Galvanized Iron in any of our brands, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.
Warehouse to the London Docks.
GALVANIZING WORKS, REGENT'S CANAL DOCK, LIMEHOUSE; BROAD-STREET AND BERKLEY-STREET, BIRMINGHAM. LONDON OFFICE, 3, MANSION HOUSE PLACE.

IRON BUILDING AND ROOFING WORKS, BIRMINGHAM.
PORTER (BROTHERS) AND STUART (LATE JOHN H. PORTER).
IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON, (IMPROVED PROCESS.)
JOHN SYMONDS and CO. WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEETS IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being ensured.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction in ease of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and Co. (opening to the Monument), London-bridge. Established A.D. 1700.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELE and STEDALL'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY. The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

CHEAP PEWTERING, GAS-FITTING, and BELL-HANGING.—Improved Moulded Counter-cogines, 6ds per pull; Private Residences fitted with Gas, Four Lights complete, 80s.; Bells hung in Secret, with best Porcelain Covers, 8s. per pull.—BAILEY, Pewterer and Gasfitter, Manufacturer, and Gas-Fitter, 12, Spa-road, Bermondsey.

TO CONTRACTORS AND BUILDERS.
BENNETT'S LOCOMOTIVE and SELF-ADJUSTING CENTERING for SEWERS and CULVERTS, is to be commended as an invention saving time, labour, and loss of time, and is strongly recommended by Mr. BAILEY, C.E. Requiring only to be struck to be pulled together, three minutes only being required for a length of 20 feet, the striking being so arranged as to insure equal pressure on all parts, thereby dispensing with the risk of crippling or throwing the work beneath the invert, and requiring no cooking, move by, and resetting a length of 20 feet, which length is sufficient for any ordinary diverse curvilinear arch. Patentee and inventor of JOSEPH JEFFREY BENNETT, Dover, Kent; or of Mr. JAS. HOLDSWORTH, 21, Shaftesbury-crescent, Victoria-bridge-road, Pimlico.—Licences granted.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 16 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOODBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. H. BOODBYER (late STURCH and BOODBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.

CHUBBS' PATENT DETECTOR LOCKS are perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.

CHUBBS' PATENT LATCH, for front doors, counting house doors, &c. is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.

CHUBBS' PATENT FIRE PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the falling of brickwork, timber, &c. in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.

CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.

CHUBB and SON, 57, St. Paul's Churchyard, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Check-staples and Striking Plates, Fire proof safes, Deed and Cash-boxes, Carving and Lever Presses. Descriptions and lists of prices may be had at the Depôt, 52, Strand, gratis.

STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Offices, No. 7, Bisle-lane, London.

FIRE-PROOF CONSTRUCTION.—
FOX and BARRETT'S PATENT.

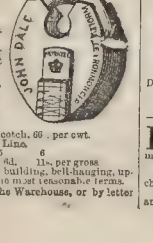
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; a structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, slate, stone, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as lessening the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi.



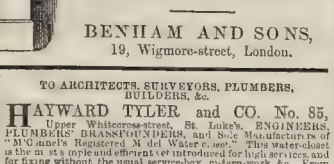
ARTESIAN WELLS.—Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, & c. Manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of Ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.



Elliptic Stoves, double backs,
3d. per inch, and upwards.
Register Stoves, 5½d. 8d. 7/4. 8d. and 9d. per inch.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, soot doors for the same, hot-water pipes, elbows, tees, 45 plugs, throttle valves, stop cocks, flange and socket elbows, &c., also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge wharf, No. 6, Bankside, London, near the Southwark-iron-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILDEVIL'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000lb. of water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stoves, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, architect, of Victoria-street, Westminster; Vegan, Son, and Raymond, Dockhead, and several maltsters, millers, and manufacturers in London and country. Apply per post to T. BOILDEVIL, Engineer for French Flour Mills Turbines, &c. 55 King William street, City.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEFRIES'S celebrated DRY GAS METERS upwards of 40,000 in use.—See testimonies at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the accompanying statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the large buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at a fair rate.

FOUNDRY AND IRON WORKS,
68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

FIRE—ROBBERY—VIOLENCE—PILLAGE.—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the strongest safeguards in the world against
EXTENSIVE FIRE IN GLASGOW.
MESSRS. DODDS & CO.

Gentlemen,—At the serious fire in Union-street yesterday, by which my premises were destroyed, I owed the preservation of my books to the MILNER'S SAFE which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.

I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.
27, Union-street, Glasgow, Feb. 23, 1854.

MILNER'S PHŒNIX SAFE WORKS, Liverpool, London Depôt, 47a, Moorgate-street, City.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

JNO. HOLMES, many years Manager to Mr. Thos. Jackson, Commercial-road, Pimlico, begs to inform his Friends that he has entered into PARTNERSHIP with Mr. T. THOMPSON, of 8, Crescent-terrace, Millbank, where their business of Marble, Wood, and Stone Brokers, Auctioneers, and Builders' Agents, will be carried on till the completion of their new Offices and Wharf, at Thames-bank, Pimlico, adjoining Vauxhall-bridge. A twenty-ton travelling crane, for landing, &c. is in course of erection. Private residence, 1, Winchester-street, Pimlico.—July 1, 1854.

TO SCULPTORS, MASONS, AND BUILDERS.

MESSRS. BRINE (BROTHERS), beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SON, of Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary, Vein, and Sicilian, will arrive next month. They already have 300 blocks of Vein and Sicilian to select from at their extensive depôt, Great Northern Wharf, Canal road, King's-cross, where they also have a large assortment of various descriptions sawn by their powerful machinery. H. W. WILKINS, Manager.

PORTWAY MARBLE WORKS, Frome, Somerset. JOSEPH CHAPMAN, Statuarist, Builder, and General Contractor, having conditionally accepted a commission agency in Italy, is prepared to negociate with any person disposed to embrace an opportunity which but seldom offers of securing a business which has been established for nearly half a century. The premises are most eligibly situate in a public thoroughfare, within five minutes' walk of the railway station, and possess every facility for an extensive and respectable trade. An immediate guarantee of £1,000 is required. Parties desirous of the work on hand may be secured on reasonable terms. Applications, either personal or postal to be made at the above address.

TO BUILDERS, MASONS, AND OTHERS.

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves. Cisterns and every description of Slab work. Cisterns, Sinks, Slate Tanks, with plate-glass sides, for fish zoophites, &c. and every description of Slab work wrought and fixed on the shortest notice: ¼ inch Slate Paving, in runs, planed on one side, and squared, fitted to lay, warranted stronger than 4 inch York, 6d. per foot super.—Baltic Wharf, Commercial road, Lambeth.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the Nobility of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to observe that the Slabs are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a deception has been made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, where there is much wear. N.B. The Tariff for 1854 is now ready.

Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application to E. MENDHAM, Secretary.

Portable Engravers' Presses and Substantial Stoves supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn park, Jan 19, 1852.

In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours, &c. C. Hacker."

N.B. The Company's illustrated Circular, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 6 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

PRINCE and CO. or the Chief Clerk.

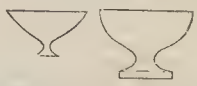
The Builder.

SATURDAY, JULY 22, 1854.

THE creditable efforts now making in England to disseminate taste through the country, and to give all classes the means of appreciating and understanding various branches of ornamental art, give a more than usual interest to the subject, and invite every inquiry that may bear upon it.

The practical views of the age have at length acknowledged the necessity of giving to all portions of the community the same means of educating the eye, and few will now deny the propriety of uniting the decorative with the useful in objects of every-day requirement. For what hope can there be of general improvement in the "arts of production," if those who create them are ignorant of the simplest notions of taste, and cannot even comprehend the beauty of a design if presented to them? It is not by the education of the higher classes alone, nor by the patronage of the great, that taste is to be spread through a country: they may *contribute* so far as in their power towards this object, and the efforts now making by men of rank and wealth are both creditable and useful; but for the community to be imbued with a feeling for art of any kind, the study must be general, and the minds of those who make, as well as of those who require, works of taste, must be imbued with a true appreciation of the beautiful. I do not, however, by this remark, wish to imply that men of rank and wealth, in England or any country, are distinguished above the rest of the community by correct taste: the few who possess it are the exception, and the exhibition of objects of their choice too frequently demonstrates an admiration for meretricious ornament and faulty design.

One great impediment to the cultivation of taste is the notion that beautiful designs are only to be found in expensive objects, and are therefore out of reach of all but the wealthy; and, indeed, when there are few capable of making good designs, the conclusion is not drawn without some show of reason, making it all the more necessary to remedy this impediment by a more extended art-education. For, as long as taste is confined to a few individuals, and not introduced into the ordinary ornaments and utensils of common life, it will continue to be almost an exotic plant, and a mere luxury. "Arts of production" can only be beautiful in proportion as they depend upon "arts of design;" and as beauty of form and proportion, exquisite detail, and high finish, were sought for by the Greeks in their vases, lamps, and other common utensils, so may our ordinary objects, whether intended solely for ornament or for every-day use, be made beautiful as easily as they are now generally hideous and misshapen. This depends on the mind that devises them; and to despair of giving to the commonest object an elegant design, is to acknowledge incapacity and want of taste. The same maxims laid down by Vitruvius for architecture apply to them:—1st. That they should answer the purpose for which they are intended; 2nd. That they should be durable, or of solid workmanship; and 3rd. That they should possess beauty: and every one without these conditions must be faulty and imperfect. But beauty is not to be obtained by capricious *ornament*, such as overloads so many of our modern productions; and unless the maker knows *why* the peculiar form, and all the ornamental accessories, are given to his work, any splendour of decoration which may merely delight the ignorant, will only be looked upon by men of cultivated taste with horror and disgust.



Taste, to be of use, must pervade all classes; and by this means, graceful and beautiful objects for every-day use will come into general demand, and be generally made.

They will also be obtained at moderate prices, and thus be placed within reach of all, instead of being confined to the wealthy few who happen to be possessed of cultivated taste. For it is not by making what is elegant dear to the purchaser that art and taste will flourish: this is an impediment, not an encouragement to them; and until good things are within the reach of all, and appreciated by the majority, it is vain to hope for excellence in any country.

I am, however, far from maintaining that the enjoyment of tasteful designs is even now *necessarily* limited to people of ample means; for many a simple and cheap object may be made in good taste, without any additional cost; and the humblest individuals may display an innate perception of the beautiful in the ordinary ornaments of a cottage, or in the coarsest materials. Owing, however, to the deficiency of taste in those who make articles of common use for sale, it is rare to find any that do not bear the stamp of utter barbarism; and there is little, indeed, to elevate the mind or correct the eye of the general mass. It is, therefore, absolutely necessary that all should have the mind and eye directed to the perception of what is good; and, unless taste pervades all classes, so that both the maker and the purchaser may possess that knowledge, the production of beautiful objects will depend on accident or caprice. The one may manufacture them, but the other will not desire what he does not appreciate; and it will be equally vain for the latter to possess a taste he cannot gratify. Besides, as Mr. Laing observes, "what employs the industry and ingenuity of the many is of more civilising influence on society than what employs the genius of the few;" and as "much wealth locked up in gold and silver ornaments is a sign of a low progressive social condition," so good taste may be possessed by a few, while the rest of the community continues to be unconscious of its beneficent influence. In that case it is a mere luxury, and it generally happens that, in a condition of society where it is thus limited, the search for objects of art is rather a caprice than a real taste. Luxury is the enemy of refinement, the parent of *rococo*, and of splendid monstrosities. For taste to last, and become general, its rise and progress must be simple and gradual; it must be sown and reared, and will never flourish by mere transplanting.

It often happens in this country, when an approach to good taste has been shown in the design of some common object, that it turns out to be the result of pure accident, a copy, perhaps, of something selected at random, which, as the maker (on being questioned) admits, had merely the recommendation of novelty, being an imitation of something hitherto not known in his particular trade. Besides this, the copyist frequently spoils the original by some capricious change of his own, introduced without any reason, totally at variance with its general *motive*, and with no other plea than a crude notion "of varying" (or if he has the vanity to suppose it, "of improving") what he should have left unaltered. Hence, if you praise one of these accidental works, or suggest an improvement in another, or censure a bad alteration already introduced, the unconscious maker is at a loss to understand the reason of the praise, the necessity of any change, or the merits of the censure; and then, in order not to appear ignorant in the matter, having invited your admiration to some other object of the most unmitigated barbarism, he at once proclaims how pure an accident it was that led him to copy at all from a good work. You turn to another, and make a remark about its deficiency in a certain part, which has probably been one of his own "*improvements*;" when he thinks at once to overwhelm your objection by "The original, sir, from which that is copied, was found at Pompeii;" and remains fully persuaded that you know nothing about the matter. For to be found at Pompeii is his criterion of excellence; and his incapacity for judging prevents its occurring to him that, even if exactly the counterpart of a Pompeian model, it may still be faulty, even without the several *improvements* the work has been doomed to undergo during its transmutation from the ancient model to the English copy. Utterly ignorant *why* one thing is good, another bad, or how small an alteration may spoil the whole effect of the best work, these people still have preconceived notions; and it is curious to listen to the crude and fallacious dogmas they may have laid down, or borrowed from some worthless authority about the principles of beauty and form.

Among the many instances of this I will mention one, which though accustomed to their want of taste, I scarcely expected in a man engaged for so many years in the manufacture of works of ornamental art. It was while looking over his vases, that the form of one of them came under discussion, and led him to expound his views on beauty. A ponderous folio filled with well-executed drawings of every kind of vase, from the best and worst models, lay upon his table, showing that neither time nor trouble had been spared in making the collection; but when he pointed out the bad as models of perfection, it was evident that neither the possession of accurate copies of so many different works, nor the habit of selecting from them, had given a proper direction to his taste. He had no perception of *beauty*, but he had his own view of a *theory*, and every thing was to bow to his crude ideas about "flowing lines." A Greek cylix was, therefore, pronounced by this criterion to be the *ne plus ultra* of bad form, because "the bowl being so nearly at a right angle with the foot, the lines could not flow." His test of excellence was illustrated in the outlines of cups of this form, and the abrupt

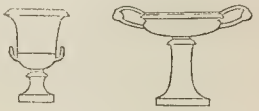
contrast of lines in the Medici and similar vases was severely censured.

A visit to another artist in this line led to a different result. The fault was not in the maker, but in the public. He had copied, with the judgment of a man of taste, the most beautiful Greek vases, and had introduced upon them the graceful and classical designs of our ill-appreciated Flaxman; and any one might have expected that the growing desire for objects of good form would have ensured their sale and encouraged his efforts; but going one day to give him an order for another tazza, I found his shop crowded with the most tawdry, ill-proportioned vases of a different manufacture, each looking as if, while still in a plastic state, it had been pulled up by the neck to increase its length. "What," I asked, "has made you give up good things for bad ones? Have you abandoned all that was in proper taste for a new caprice, or did you only make good things by chance?" "It is not *that*," he said; "these things sell, and I must live; I can find plenty of purchasers for them, and few for the others." What could be said? It was the purchaser here who wanted taste; and as long as the public is deficient in it, vainly indeed may the manufacturer possess it. "But why not," I asked, "have them of good proportion, why so elongated beyond all reason?" "This," he said, "it is out of my power to prevent. I buy them; they are made by others, and I must take them as they are; for they are sold *by the height, at so much an inch!* and to

require the height to be diminished in accordance with the breadth would only be considered a *ruse* to decrease the price." And yet these profess to be objects of ornament and taste!

"Why," I remarked to an Italian, "do you not make copies of such and such beautiful objects so justly admired in Italy? you would find many to purchase them, and you would do good by causing them to be generally known." "I have already made several of them, but they did not sell, and now I confine myself to those that do;" and then showing me some of most commonplace ornaments, he said, "These I can always sell, and I have a family to support." Among them were dogs, and flowers, Canova's three lanky graces, and elongated vases equally deficient in proportion, form, and decoration.

And now having mentioned an Italian, I cannot abstain from acknowledging the debt we owe to the poor "image men" who wander through our streets; for I have no hesitation in saying that they have done more to improve the general taste, to place copies of known sculpture within the reach of all, and to familiarise the eye of the English public with what is good than any school (which a few only can attend), than any gallery (which the working classes seldom use), or any institution in the country; and when we recollect that English art paraded (without shame) through the streets was confined to cats with moving heads, green parrots, wooden lambs covered with cotton wool, or (if the figure of a man was attempted) a coarse boor holding an equally vulgar pot of beer; we may feel grateful for the change, so unostentatiously brought about by these humble foreigners.



The taste, indeed, of many English who pretend to judge of art too often leans towards the mere matter-of-fact representation, both in statuary and in painting; and while the ancient Greek or the modern Italian would give his first sign of genius for art by selecting an object of graceful form, or by giving to the figure he moulded an exalted ideal character, English talent would manifest itself and obtain applause by the mere imitation of humble life in the figure of an ordinary peasant, or some graceless scene of common life.

It is hopeless for any one who has a real appreciation of the beautiful to seek for some object of good taste among the articles of use or ornament he purchases for his house, or to urge on the persons whom he employs to make them for him, the necessity of carrying out his suggestions, as long as they are incapable of understanding them. And how is this to be wondered at, when they are unconscious of proportion, form, beauty of outline, colour, adaptability of materials, and of the many conditions essential for excellence in design, destitute of the means of obtaining a knowledge of the subject, of guiding and improving their judgment, and of discriminating between good and bad? It were a miracle if men without the opportunity of understanding an art should succeed in practising it; and how, unless shown what to avoid and what to admire, can they form their taste?

And here I feel a pleasure in paying a just tribute to the good judgment which adopted this mode of proceeding at Marlborough House. For it is by the *negative* rather than the *positive* process that instruction is conveyed to the untutored mind in the most intelligible form; and when any one has to choose one out of twenty objects, it is far easier to make the selection if he begins by rejecting those he will *not* have, than by at once attempting to fix on the one he prefers. Let him rather say, "this I will *not* have, nor this, nor this," until he has reduced the number to two; and his final choice is even then more easily made by rejecting one of them, than by trying to decide on the best. But while I fully approve of the mode of instruction by showing what is *bad*, and *why* it is so, I must admit that a "chamber of horrors" should not be confined to one, but should include (under different gradations of censure) *every* room, except a very small *sanctuary*, privileged to contain a few really good specimens; and however gratefully I would acknowledge the condescension and the public spirit of any great person who sends objects of art to an exhibition, I would only commend and draw attention to such as are *worthy* of being imitated, and exclude those that are deficient in taste from the recommendation that they are "sent for study;" and where so little good is made, and where few can be expected to possess perfect specimens, or even perfect taste, no sensible person could be offended at such an exclusion.

It is of the highest importance for creating and improving the taste of the public that good designs should be constantly before them. Even those who are gifted naturally with a certain amount of it are liable to have it vitiated by frequently seeing bad models; and a more cultivated taste is occasionally warped and led insensibly towards the extravagant if, debarred from the contemplation of the beautiful, it has faulty designs constantly before it. Many again allow themselves to be deceived by the fiat of men whose names are thought to give weight to their opinion; and it is thus that some who might have arrived at a just appreciation of colour have had their judgment warped by reading the plausible theories of people totally ignorant of the subject, but not the less positive in their opinions. Nothing, indeed, is more likely to mislead than a theory propounded before the subject itself is understood: it is like the attempt to write a grammar before the language is known; and the theorist would do well to remember that languages were spoken long before grammars were invented. It is better to wait till colour is understood before theories respecting it are laid down; and had this been done, the blunders that have been propagated by a fallacious notion about accidental colours might have been avoided.

If those who have some kind of perception of the beautiful are misled, how hopeless it must be for the great majority who are destitute of this advantage to arrive at any knowledge of it without proper direction. Indeed, cultivated as was the graceful mind of the Greeks, we even find their taste sometimes failed to be correct, as in some parts of their beautiful vases, especially in the handles and the foot;

and some of the later ones of Apulia are wanting both in form and proportion; while many have the fault of elongated shape, so frequently found in those of modern Europe. And

though the drawing of the figures on the Apulian vases is remarkable for freedom of execution, the composition has not the same purity as on those of the age of Alexander, and the introduction of numerous figures on the same field, and a greater luxury of ornament, proclaim the decay of real taste, and the approaching downfall of art. It is this want of proportion that spoils the generality of the richly coloured glass vases of Bohemia; showing that the skill of the makers in the manufacture of the material far exceeds their taste and correctness of eye. And if really intentional, and not an accidental caprice, it is probably owing to some preconceived notion about height giving lightness and grace, which may easily mislead a person incapable of *feeling* the beauty of symmetry.

The Greeks generally excelled in the appreciation of form and proportion; and such was the beauty of their designs, both in small objects and on a great scale, that no people have ever approached, much less equalled, them. And even in the early infancy of their art we may trace the tendency they already had towards the perception and the practice of the beautiful. They had also this great advantage, that men of first-rate talent were ready to aid in the production of objects in common use; as was the case in Italy also during the flourishing periods of art; and it is of the greatest importance that industrial art should have the benefit of such assistance. Nor were they above adopting from those less refined than themselves, whatever hint could be obtained from their particular style of ornament: beauty was beauty to them wherever it was found; and it only remained to adapt it to their own wants in the most suitable way. If the advantages arising from this real feeling for the beautiful were better understood at the present day, we should not have decorative art left to the accidental caprices of a mere decorator, and depend for those articles of use which ought to be ornamental upon the misguided fancy of an uneducated mechanic, nor should we have the misshapen glassware, the hideous lamps, the monstrous tea-urns, or the whole furniture of our tables and of our rooms, that disgrace our civilization. But talent will be rare among designers so long as few are able to judge of the effects of their own compositions, or have any notion beyond "copying from the antique," *because* "it is antique," without entering into the true feeling of the original, or understanding in what its beauty consists. One therefore designs a cup or a tazza, and thinks he has produced a real "Pompeian article," *because* he has put together a certain number of details totally unconscious that a mere repetition of ornament is not a design, and that the whole when finished, having no *motive*, is utterly unmeaning. This putting together a number of parts to form a whole is indeed the besetting sin of incapable minds, and is too often witnessed in the productions of architects as well as of those who make ornamental models; and instead of the building or other work being conceived in the mind as a whole, of which the details are the necessary accessories, each part is added in order to *complete* the design; and as there is no keeping and no necessary connection between them, many a one is removed, altered or varied without any reference to the general composition.

In the furniture of our houses examples of similar additions without an object, either for ornament or use, are abundant. Of such a kind are tables with geese or swans striving to thrust their necks against its central pillar, with no apparent reason unless to turn their less graceful tails to the company, and serving no more purpose than the wooden scrolls of another that seem to have fallen on their backs upon the plinth.

It has been said by Pliny, that the Greeks combined the forms of several beautiful women in order to constitute a perfect model; but this notion of this compound figure is such as a Roman might, but no Greek artist of real talent would, entertain. The latter would form in his mind the conception of perfect beauty, more perfect than he might find in or individual; but he would not put together the material parts of different figures to create it and such a *construction* of a statue would imply an utter deficiency of genius.

The Apollo and the Venus were not so formed and it would be as unreasonable as to combine the parts of several faulty buildings to create a perfect structure.

It is not only to a deficiency in the artist who executes it that is to be attributed the blame of a faulty work: this, as I have shown is as often to be laid to the charge of the public or of the private employer; and when the model of a monument, or any work of art, is proposed by a designer who has real talent, it is not impossible that the *committee* assembled to pronounce upon it may be incapable of forming an opinion on the matter. Thus it happened that a architect of real talent, when requested to give a design for a certain building, was obliged to bow to the decision of an ignorant committee because they had a preconceived notion that particular feature was required for every large edifice. Nothing would persuade these worthies

hat a grand front could exist without a pedi-ent with figures in the tympanum, whether it as Gothic, Elizabethan, or of any other style. n vain the architect represented that in the articular one he had chosen for the building pediment would be a monstrosity; that build-gs with large roofs, like the Tuileries, or the own-halls of Flanders, had no place for a pedi-ent; and to have both roof at the top and able beneath it would be inconsistent. It was seless: they would not pay their money with-ut one, and it was to be introduced somehow the most conspicuous position. And thus e reputation of an architect was to suffer for e caprice of ignorant people; whose paradox mounted to this, that a man ought to appear ith one hat below his chin, and another on his ead.

And *who* was the committee? or *who* is any ommittee? It has been said of committees, of other boards, that they "have no con-iences:" it may be said with equal justice, hat they have no individuality; for when a de-sion is come to by a committee, *who* has ecided? no one knows; and no one is respon-ble for it. The principle is an unsound one. here is no objection to a committee of *con-ultation;* but every decision ought to be pro-ounced by *one* person of sound judgment, who hould be, and feel that he was, *responsible;* nd any one who knew that he would have to nswer for a hasty or improper opinion, would ake care to obtain and follow the best advice, hich, too, need not necessarily be confined to hat of his official coadjutors. Make a man *esponsible*, and he will take means to find out hat is best; and the simplest mode of select-g him would be by ballot among the members the committee itself, who would thus be elieved from the too common habit of giving ay to some troublesome, overbearing, member their body, who, being the most busy and resome in the inverse ratio of his talents, gets s own way, in opposition to less assuming and ore capable men.

And how are committees too often formed? ome members are chosen because their repu-tion pronounces them to be well informed, erhaps on this, perhaps on some other, subject; me because their incapacity is overbalanced r a sounding title; and some for various asons, which may or may not be valid; while any of them, when appointed, do not attend all, and none are responsible even if they do. ence we may pronounce this verdict, when eir decision is bad; that sums of money have en thrown away, and the taste of the country egraded, by the doings of "*some person or rsons unknown.*"

What undertaking that requires a head could e expected to succeed under, what army could be ommanded by, such a council? and in a country here the necessity of a chief is acknowledged y its institutions, it does seem rather incon-stent to leave questions of importance to the hance decision of numerous individuals, with-ut a *responsible* president.

Impediments of various kinds stand in the way f our general progress towards taste, and these equire first to be removed. Museums are of e highest importance for the instruction of the ublic; that the manufacturer, the artizan, and ie working man may have easy access to bjects of art. For it is not by the accidental ppreciation of it among some individuals, that aste of any kind will flourish, or become general n a country; and the arts of production being f elegant design, is a far surer criterion of its eing spread through the community, than the aost beautiful objects seen in the mansions of he rich. Ere the public can appreciate works f art, they must acquire a true feeling for the eautiful wherever it is found; otherwise they ay mimic and echo the approbation of ac-nowledged critics, while their judgment will be rude and uncertain; and it is to be regretted hat the habits of waiting for the opinion of ome other person, before they express (not to say orm) their own, is not unusual with the English. The great Exhibition of 1851 had therefore, mong its many beneficial results, the good effect of obliging them in some measure to judge or themselves, since the variety of objects, and he want of a ready counsellor, made it difficult o obtain any other opinion but their own. Their decision, it is true, was not generally the best, or the most refined; and some natural objects, as the "Boy with the broken drum," the "Dog defending the child from the ser-pent," veiled statues, and commonplace, un-elevated subjects, were their favourites. They perceived in them a resemblance to what was real; but they did not understand that such subjects present no idea fit to be commemorated in a material, and with a skill, that belong pro-perly to high art. Yet the effort of judging had its effect; and a still better opportunity for correcting the ordinary taste is now afforded by the varied collection of the Sydenham Palace.

The want of museums in our manufacturing and other provincial towns has been a great evil; and the few established there have been so deficient, that no notions of art, or correct taste, could be obtained from them. Hence the English manufacturer, or the decorative artizan, has long been in the habit of borrowing designs from France, the beauty of which is only com-prehended by him, because he finds they have been approved in the country of their birth. It is not *his* choice that teaches him to admire or adopt them, and he only appreciates their merits in proportion as they "pay." Nor is this to be imputed to him as a fault, for he cannot acquire taste when his eye is uneducated; and his inventive genius, if he has any, finds nothing to direct or develope it. The English, indeed, are particularly in need of such instruc-tion: and the readiness with which artizans and others seek to profit by it when offered to them, is shown by the published "Report of the Department of Science and Art." It is, therefore, with great satisfaction that we hail the establishment of schools in various parts of the country, for primary instruction in draw-ing, and the means afforded to masters for studying at the central institution in Marl-borough House, preparatory to their taking the management of provincial schools. But this is not all that is required to give *general* taste. All cannot and need not draw, though all should be able to accustom their eyes to see and appreciate what is beautiful; and this can only be done by large *public collections*, and the constant contemplation of well-selected objects of art.

The schools of drawing, and the liberal manner in which books and useful models are offered for the study of artizans, as at Marl-borough House and other places, as well as the admirable lectures to which students may listen, cannot fail to operate satisfactorily; and even in some country towns the energy and exertions of individuals in forming annual exhibitions have done good service; but these laudable efforts are partial and small compared to the mass of the population, who have not the same means of visiting objects of good taste that is afforded to the working classes of Italy, France, Germany, and other parts of Europe. Indeed, it would be a miracle if a people, not naturally imbued with an appreciation of the beautiful, should possess that quality with so few opportunities of acquiring it.

These classes are by their employments debarred during six days in the week from visit-ing our museums of art; and the Crystal Palace at Sydenham, which is expected to be the best means ever offered for instructing them, is to be closed on Sunday. How then, with the British Museum, Sydenham Palace, National Gallery, and every other collection, closed, is it *possible* for our people to obtain any knowledge of things they have not the means of seeing? Nothing short of inspiration can make them appreciate works of art so carefully kept from them; and the eagerness with which they *do* visit such objects, when they have the opportunity, is plainly shown by the crowds that press to the British Museum at the Easter holidays. But an occasional visit after long intervals will not instruct the eye, nor accustom it to works of art; and if men who are working for their liveli-hood were to give up a day's wages every now and then to study art, we should indeed look upon them as more deeply imbued with the love of it than any Greek of ancient, or Italian of modern, days. How they are to arrive at that love of it would be difficult to explain; but certain it is that no one could expect either an inspired possession of it, or that they will sacrifice their wages to obtain it. In reply to this, some may answer, "Sunday is not a day for sight-seeing; it is a day of rest:" and so it is of rest from *labour;* and those who have other six days to instruct themselves and divert their minds, need not then visit any collection of art. They may or they may not; though many a rigid talker scruples not to do so when abroad. It is the working man, who has six days' confine-ment, for whom an innocent and useful recrea-tion is wanted; and we should not "strain at a gnat and swallow a camel," by leaving the gin-palace open to him and closing institutions which would lead him to select and indulge in better pursuits.

Others again imagine that it would interfere with church service; but this would be obviated by not allowing a gallery or museum to be open till after two o'clock; and if it is not discovered that the great encourager of crime, the gin-palace, interferes with the church, it is difficult to understand why the contemplation of human-ising art should do so. Such improvement to the mind is not like the mere love of amuse-ment or excitement, as at a theatre; and indeed from this last no one is excluded by business or work during the evenings of the other six days; nor should the excuse of want of refresh-ment be permitted to sanction any buying and selling; and at the Sydenham Palace all that is for sale should be shut up as as in a shop. The opposition to the Sunday opening of museums of art is not surprising; for what useful innovations were ever proposed in England without it, from public coaches, machinery, steamboats, railways, and the rest, down to Minié rifles? And it requires years and years to get rid of a Smithfield-market, intramural interment, or any other nuisance. Great hostility was even shown to Sunday schools, when in 1781 they were first established for instructing those in humble life in the usual routine of education. It is therefore only consistent that *this* Sunday school for another improving branch of instruction should be opposed; but the time will come when a more practical generation will wonder at our blindness, which might be an innocent one if it did not commit an injustice.

Nowhere is wholesome recreation so much required as in England, where the frequent occurrence of wet weather so often prevents the working man from seeking it in the country, and drives him to idle amusements and to drink. For it is folly to pretend that men who have been working six days will not seek, and do not re-quire, some kind of recreation; and if a good one is not provided for them they will too fre-quently be tempted to what is bad. So far from tending to irreligion, it will make them less animal and more intellectual, consequently, more soberminded and religious; and we shall do better to provide a remedy for ignorance and drunkenness, than persist in their encourage-ment.

Shut the gin-palaces, and give the people innocent recreation and instruction; you will then confer on them a benefit, and will discover that Englishmen are not worse than French or Italians, nor less Protestant than the Prussians of Berlin; while you will find them less drunkards than they are now, and capable of understanding what you expect them to see, without having it presented to their sight.*

GARDNER WILKINSON.

POETIC SCULPTURE.

WE have lately viewed with much gratifica-tion a monument by Mr. J. Edwards, sculptor, to the memory of the late William Hawkins, esq. and Mary, his wife, about to be erected by their sons, one of whom, Mr. W. Warwick Hawkins, is the member for Colchester. It includes a figure of Hope, in high relief, the size of life, with an anchor and the Bible by her feet, and a vase at her side, inscribed *Mors est janua melioribus vitæ*, and bearing, amongst other emblems, the monogram of our Saviour, the poppy, the cocoon, from which the butterfly is escaping (the soul quitting its earthly habita-tion), and the Egyptian winged globe, the symbol of eternity. On the Anchor will be

* To be continued.

found, "It is good that we should hope," "Hope is the anchor of the soul," "Hope to the end." Above the upturned head of the figure, which is surmounted by a lambent flame, is the morning star, and the dispelled clouds, shown on the tablet forming the background, give a slightly indicated "glory." The work is remarkable for pure devotional feeling, and is most carefully and delicately finished.

In the studio of Mr. Edwards we saw several other very charming designs of elevated character, enough to convince us that if he receive proper aid, we may look for some fine works from this gentlemen. We give part of his own description of a sketch purporting to represent a philosopher directing the attention of a youth to the precept "know thyself," inscribed over a niche containing a bust of Thales, the great father of ancient philosophy, and author of the precept. "It is designed," he says, "to foreshadow some great *future* philosopher rather than represent any one of the *past* time—to foreshadow a venerable man in whom true wisdom, knowledge, and goodness, will happily meet together and glow with an intenser, brighter radiance than they ever have or ever could, perhaps, in any one even of the most illustrious in the by-gone historical period—a man in whose large clear mind all the higher sciences, when far more perfected than they are at present, will find an ample and a fit abode; and whose large heart will direct all their concentrated light to bear upon the above fine old precept of Thales, for the purpose of dispelling the prejudices and ignorance which have long darkened the minds of so great a number of mankind, and for the purpose too of infinitely increasing their comforts and happiness by the multiform means proceeding from a true knowledge of themselves—a knowledge of all the laws, mental, moral, and physical, whereby the Incomprehensible regulates the human family in the shadow stretching from the cradle to the grave."

Truly as Plato writes,—"To know oneself is wisdom." It is less easy to assent to the *dictum* of Xenophon (as quoted by Mr. Edwards), "By knowing yourself you will pass your days in happiness."

There is another sketch with which we were more particularly struck,—"The Weary Reassured." The worker has fainted in his well-doing,—doubting the usefulness of further effort: the question, "What's the good?" has prostrated his energies and saddened his heart; when, Lo! a solemn vision, "Telling of things," as Milton sings, "which no gross ear can hear." The idea is admirable. There is the right stuff in Mr. Edwards, or we are much mistaken, and we cordially wish him the means of achieving the success he is capable of.

THE LATE MR. J. C. CHRISTOPHER, DISTRICT SURVEYOR.

It is with deep regret, in which many of our readers will join, that we have to record the death lately of Mr. James Charles Christopher (of the firm of Garland and Christopher), who had held the office of district surveyor of the parish of Hammersmith, Middlesex, from the date of its first creation. The circumstances out of which grew a result so calamitous were briefly these:—It appears that the deceased had left London by a late train on Thursday evening in last week, and that after partaking of a hospitable entertainment given to the gentlemen forming the committee of the District Surveyors' Association by Mr. Gutch, at Greenwich, he proceeded on his journey, with the intention of joining his brother, first lieutenant of the *Lizard*, to witness the embarkation of the French troops at Calais, destined for the Baltic. While on this fraternal mission, and as his brother's vessel, the *Lizard*, was nearing the *Algiers* line of battle ship, her top-mast got foul of the yards of the *Algiers* and snapped; and the falling spar in its descent on deck struck the back part of Mr. Christopher's head, and caused his almost instantaneous death. The high spirits the deceased was in up to the very moment, it might be said, of the accident casts an additional shade of melancholy on an occurrence which has deprived the profession of an energetic and much-respected member, and his immediate circle of a warm-hearted and zealous friend. His untimely loss points a moral we should all profit by. Many will echo our words when we say with real sorrow,—poor Christopher!

THE PROPOSED OXFORD UNIVERSITY MUSEUM.

To increase the value of the collections illustrative of natural history, and to aid the school of natural science in the university, it is thought desirable that a general university museum should be formed with distinct departments under one roof, together with lecture-rooms and apartments for the use of professors, and working rooms for the students. Designs have been accordingly advertised for, and a statement of the requirements prepared.

It has been determined that this museum shall be a building of two stories in height, in the form of three sides of a quadrangle, and the area covered in by a glass roof; the fourth side being so adapted as to admit of extension of the building at some future period.

With the exception of Mr. Hope's entomological collection, for which special apartments are to be assigned, it is proposed to distribute the collections illustrative of the several departments of natural history through the area on the ground floor, and in galleries, and to arrange the lecture-rooms, sitting-rooms, library, work-rooms, &c. in the three sides of the quadrangle. The ground on which it is proposed to erect the museum is an area of four acres, nearly square, at the south end of "the parks." It is nearly level, and has a frontage in every direction. The building, from the nature of the site, will be visible from all sides. A carriage-road runs along the west and south sides, and a public path along the east.

The departments for which accommodation is required are as follow:—Medicine, anatomy, zoology, geology, mineralogy, chemistry, experimental philosophy, natural philosophy, astronomy, and geometry.

The delegates have offered a first prize of 150*l.* a second of 100*l.* and a third of 50*l.* But if convocation decide that one of the plans to which prizes are adjudged be carried into execution, the premium will not be paid to the architect employed. No plan will be entertained of which the estimated cost exceeds 30,000*l.* Can the building required be obtained for this amount?

THE PARIS UNIVERSAL EXHIBITION OF 1855.

It was our privilege to give the first illustrations of the buildings erected for the International Exhibitions in England, Ireland, and America, and we are glad to maintain our position by publishing to-day a transverse section of the structure which is now in the course of erection for the Paris Universal Exhibition of 1855. In a previous number (p. 158, *ante*), some particulars of the construction will be found. It is of stone externally, and the contract was taken by Messrs. Goldsmid and Co. at 11,327,000 francs. M. Viel is the architect. There will be two wings, which will cost 6,000,000 francs more, and various temporary buildings. The main structure now illustrated is a parallelogram in three spans, about 820 feet long and 354 feet broad. The width of the centre span is 157 feet, and the height in the centre 108 feet. The gallery will extend over the whole width of the side divisions, about 79 feet.

The Exhibition will commence on the 1st of May, 1855, and will close on the 31st of October, in the same year. Articles for exhibition, whether French or foreign, will be received only through the committee of the department or country which the exhibitor inhabits. The list of those who are admitted must be sent to the Imperial Commission by the 30th of November next, at the latest.

We would especially point this out to such of our countrymen as are disposed to assist in carrying out the wishes of her Majesty and the Government. They should at once signify their intention to the respective committees, and state what amount of space they will require. Unless this be done, our Board of Trade Department of Science and Art, to whom the arrangements have been entrusted, will be unable to obtain such accommodation for Great Britain and Ireland as is desirable.

Objects to be exhibited will be received at the Exhibition Palace from the 15th of January to the 15th of March inclusive.

"Considering," as the decree says, "that one of the most efficient means of contributing to the progress of the arts is a Universal Exhibition, which, by throwing open a competition amongst all the artists of the world, and by placing so many various works in face of each other, ought to be a powerful motive to emulation, and present an occasion for fruitful comparisons,—

That improvements in manufactures are closely connected with advancement in the Fine Arts,—

That, nevertheless, the exhibitions of industrial products, which have been hitherto held, have admitted the works of artists in only a very insufficient proportion,—

That it belongs especially to France, whose manufactures owe so much to the Fine Arts, to assign to them in the coming Universal Exhibition the place which they merit,—

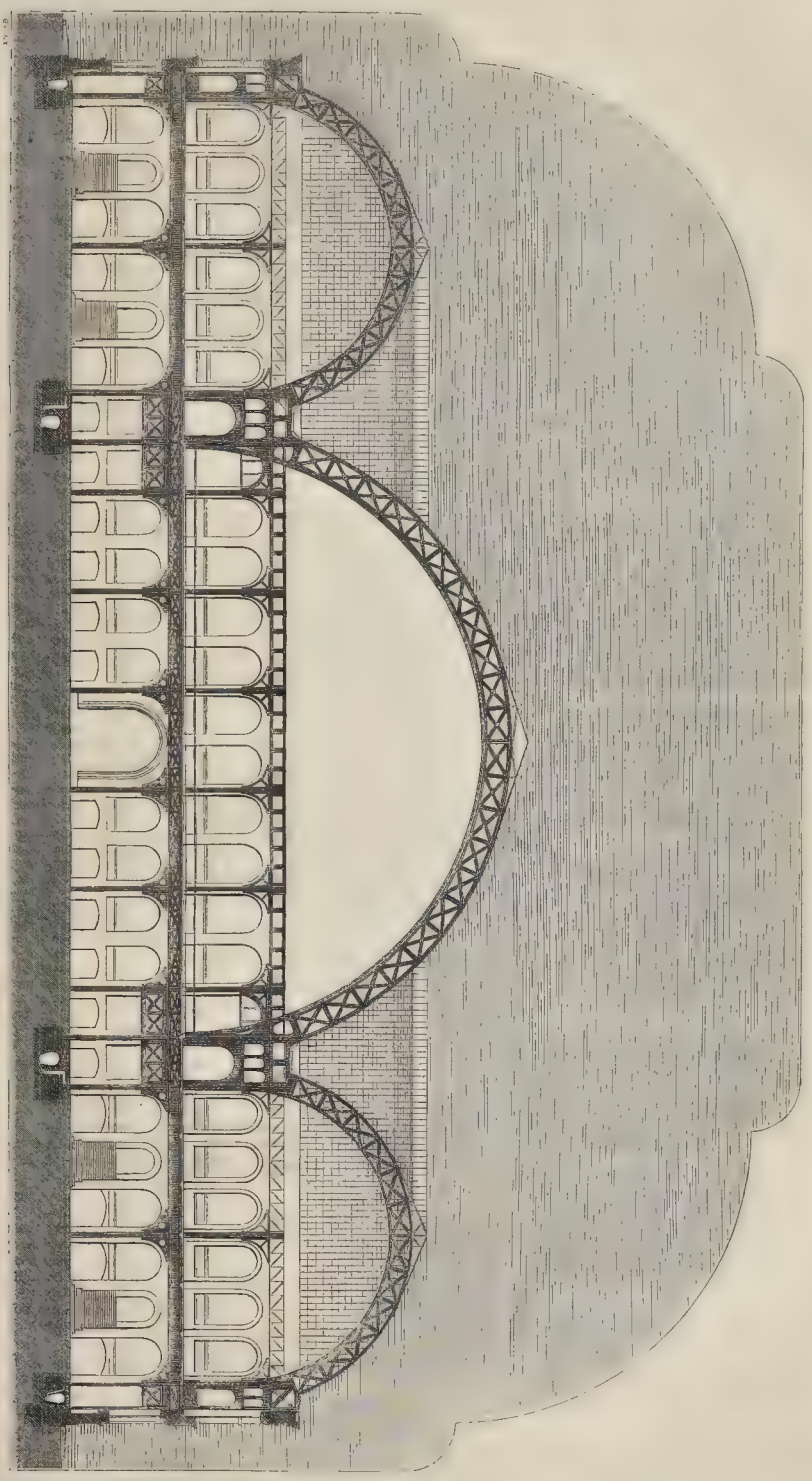
A Universal Exhibition of the Fine Arts will be held at Paris, at the same time as the Universal Exhibition of Industry."

Inventions not patented will be protected. Rewards will be given by a great international jury, divided into thirty special juries, corresponding with thirty classes named. The following are the special arrangements for the Fine Arts:—A French jury, instituted at Paris, will decide on the admission of the works of French artists. The members of the French jury of admission will be nominated by the section of the Fine Arts of the Imperial Commission. The jury of admission for the Fine Arts will be divided into three sections. The first will comprise painting, engraving, and lithographic works; the second, sculpture and die-sinking; the third, architecture.

Each of these sections will decide with respect to works belonging to its special department. The exhibition is open to the works of all French and foreign artists, alive on the 22nd of June, 1853, the date of the decree which constitutes the exhibition of the Fine Arts. Artists can present to the Universal Exhibition works which have been previously exhibited, but there cannot be admitted—

1st. Copies (excepting such as may reproduce a work in a different manner, on enamel, by drawing, &c.)

2nd. Pictures and other objects without frames; and



3rd. Sculptures in unbaked clay.

Liberal and kind-hearted hospitality is promised to all foreigners.

Our Government Department of Science and Art, we may here mention, have given notice that forty prizes of the value of 8*l.* are to be awarded to those students, under the Department, throughout the kingdom, who take medals in the greatest number of stages in each of the exhibitions. Twenty prizes are to be awarded in the autumn examination of 1854, and twenty prizes in the spring exhibition of 1855; and these prizes are to enable the most deserving students to visit the Paris exhibition. Each student will be required to make a written report of his observations on that exhibition.

A meeting of the Institute of Architects was held on the 17th, when the committee appointed by the Board of Trade, with reference to the Paris Exhibition — Messrs. Cockerell, Donaldson, and Scott—made an exposition of their views, and invited suggestions. Mr. Redgrave, R.A. attended to give such information as might be needed. It was ultimately resolved "That this meeting desire to express their concurrence in the objects of the Exhibition and that the members of the Institute will individually advance its purposes by every means in their power."

It seems difficult to define what will and what will not be admitted: this must be left in a great measure to the committee of selection which will, we suppose, be formed.

SECTION OF BUILDING FOR PARIS UNIVERSAL EXHIBITION.—M. Viel, Architect.

THE APPROACHES TO LONDON BRIDGE STATION.

No one, I think, who has noticed the approaches to London-bridge Station during the past few weeks can doubt that some very increased accommodation must be given, especially to pedestrians, who are, in the afternoon, much inconvenienced at the crossings by the multitude of carriages waiting for parties from the Palace. To extend laterally will be expensive, besides that every such enlargement widens the crossings, and renders the pathways more circuitous.

It appears to me that the cheapest and most convenient mode of relief would be to make a series of footways *through* the first-floor of the station, and *over* the crossings and carriages, and I think without anything unsightly or any hindrance to the traffic of the streets, these raised footways might be carried to the foot of London-bridge.

All round the front of the station there is a verandah covering the pathway. Let this be converted into a balcony or gallery, having access through the present windows to the first-floor of the building. Then let stairs be made *in* the building *to* each ticket station, and *behind* the building *from* each arrival platform.

A similar balcony, connected with this by a bridge, will have to be made on the first-floor level along the south side of the arcade in front of the station.

The gallery will then pass on columns over the footway to the wall of the station, and then across Duke-street, by a bridge, to the corner of Wallis's Tavern. To continue it *round* this tavern would interfere too much with the street traffic, besides giving an inconvenient terminus.

I propose that it should pass *through* the first-floors of the tavern and hatter's, converting these floors into an arcade with shops on either side. We thus are brought to Tooley-street, just east of the bridge over it; and by an extension of this bridge eastward, or the erection of a platform to its level, there would be ample room for a wide staircase and landing, avoiding the ordinary stream of passengers. The hat-shop projects forward beyond Fenning's Wharf, so that if the widening of London-bridge eastward, which has been talked of, takes place, it would be easy to carry the gallery past it to the bridge.

A bridge from the south-west corner of the Dover station to the north-east corner of the St. Thomas's garden would carry off the passengers going southward; and a branch, taking the line of the present gateway to the station (which might be improved by an ornamental bridge over it) to the north-west corner of the same garden, would render the gallery a convenience to passengers between London and Southwark, at crowded times of day.

The advantages of this would be,—

1. A great relief to the ground-floor of the station, as many of the refreshment and waiting-rooms might be put on the first-floor.

2. A direct exit from each arrival platform, instead of the circuitous course which has now to be taken. This might be rendered still better if the gallery were continued on to the platforms with steps at intervals, a gallery like the external one being constructed within, and at the back of the station.

3. Means of direct communication between station and station.

4. As I would suggest bars to be put up to prevent porters or persons with bulky luggage using it, there would be always a clear and rapid mode of approach and exit, nearly, so far as the eye can guess, on the level, and clean and comfortable.

5. By the proposed terminus at the bridge, there would be ready access, without any interference with the ordinary public, or with the architectural symmetry of Wellington-street.

6. The cost would be far less than that of any other plan, as involving very little purchase, and that probably almost repaying itself. The only purchase, indeed, would be the two or three houses in Wellington-street; but the conversion of their first floors into shops would doubtless much increase their letting value; and the formation of shops in the first-floor of the arcade in front of the station would also increase its value.

I am not an architect, as I dare say your readers may discover, and I may have overlooked difficulties or impediments; but I feel strongly convinced that, at least so far as the conveying of passengers—especially arrival passengers—*over*, instead of *round*, the station, this plan would be an incalculable relief to them, and to the officials of the station. M. D.

THE JOINERS in the employment of Mr. Wm. M'Kenzie, of Westminster, held their annual festival on the 17th inst. at the King's Arms, Hampton Court, when very kindly feelings were expressed towards their employer.

HOUSES FOR THE WORKING CLASSES RECENTLY BUILT AT FLORENCE.

SOME time since (p. 154, *ante*) we gave the particulars of a building recently erected in Florence, under the direction of Signor Enrico Guidotti, for 100 families, and by the kind assistance of Mr. Henry Roberts we are now enabled to publish a plan showing the ground-floor and upper stories of the building, and the elevation. We may repeat, that the undertaking has been carried out by a society consisting of shareholders, and presided over by the Marquis Torrigiani, who obtained from the corporation, in the new quarter of the city, between the Piazza Maria Antonia and the Fortezza da Basso, a very eligible site, containing about 4,800 square yards, at a greatly reduced rent.

The building is three stories in height: its external dimensions are 344 feet 6 inches by 126 feet 3 inches: it is divided, internally, by five parallel courts, each 60 feet 6 inches by 27 feet 9 inches, connected together by a series of archways one story in height, which form a continued line through the centre of the building.

The pile of building, as shown by the plan, is divided into twelve sections: each has its own stone staircase, and together they provide 101 tenements, besides twelve stores or warehouses, and a large bakehouse.

The tenements differ in size, and consist of sets of two, three, four, and five rooms, generally larger than those in the London model houses. Each set has a communication with one of the internal courts, where wells for the supply of water, and stone troughs for washing, are provided. Each compartment of four and five rooms has, in addition, an underground cellar: every set of rooms has one of them fitted up as a kitchen, with fireplace, and also its own closet. The living and bed rooms have no fireplaces. The height of the rooms is from 10 to 11 feet. The basement, or cellar story, and the ground-floor, are arched with brick: the upper floors and roof are of the ordinary construction.

The tenements are subdivided in the following manner;—Twenty-two sets of five rooms, the annual rent of which is from 6*l.* to 8*l.* per set; fifty-one sets of four rooms, from 4*l.* to 6*l.* per set; fourteen sets of three rooms, from 2*l.* 10s. to 3*l.* per set; fourteen sets of two rooms, from 1*l.* 10s. to 2*l.* per set; making 101 sets in the whole.

The outlay on the building, including the direction of the works and keeping the accounts, &c. amounted to about 9,400*l.* sterling.

The annual income derived from the rents, exclusive of unoccupied apartments, of the ground-rent (redeemable at 4 per cent.), of the taxes, superintendence, keeping in order, and repairs, amounts to 470*l.* sterling, which is equal to five per cent. on the outlay. It is gratifying to find that the model houses in Florence have had a similar effect to that which has been found in other places,—in obliging the proprietors generally of houses occupied by the working classes to improve, and render them more fit for human habitations.

Half the plan, on left side, shows the ground-floor; the other half shows the floor above.

The following *References* will explain the plans:—

Ground Floor.

a. Stores.
b. Tower and store-rooms, for ventilation.
c. Office of agent for the society.
d. Entrance to the dwellings.
e. Entrance to the vaults.
f. Dwellings of five rooms each.
g. Dwellings of four rooms.
h. Ditto in interior.
A. Corridors, and courts divided by railings.
B. Wells and washing-places.
C. Staircases for twelve sets of apartments which form the basement.

First Floor.

1. Dwellings of five apartments each.
2. Dwellings of four apartments.
3. Ditto ditto.
4. Ditto of three apartments.
5. Ditto of two apartments.

The second floor is arranged the same as the first.

BETTER DWELLINGS, OR PROFITABLE CHARITY.

MEN of money! shrewd and skill'd
In putting capital to nurse,
Ready to pull down streets, or build,
If either helps to fill the purse,—
Now let me tell your wit a plan
How to reap a royal rent
Out of—doing good to Man,—
Charity, at cent. per cent.

From Belgravia cease awhile,
Cold, repulsive, stern, and white,
Where each huge palatial pile
Frowns the poor man out of sight;
From Tyburnia's dreary squares
Turn your energies aside,—
And look to how the workman fares
Who built those stuccoed haunts of pride.

In stagnant cellars, dim with stench,
In putrid alleys, choked by drains,
Or where the reeking gutters drench
Some garret, rotten with the rains,
Beggar'd of water, light, and air,
And every good that gladdens life,
The poor mechanic festers there
With pallid babes and haggard wife!

Can yonder neighbouring flashy shops,
Glorious in plaster, glass, and gilt,
Where Hebrews ticket showy slops,—
And bankrupt trade is overbuilt,
Can these repay your risk and cost,
Or make you half so blest or rich
As finding homes for those half-lost
Who crowd the dunghill and the ditch?

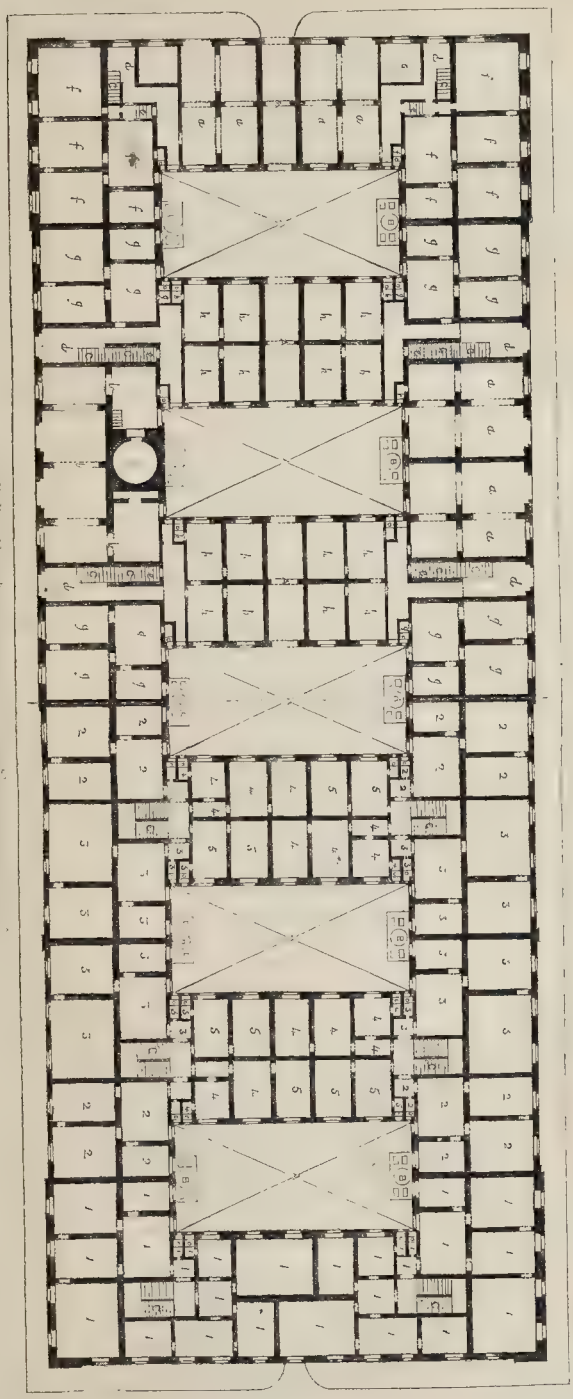
Build a broad street, a hive of homes,
Where workmen mostly go and come,
—A thousand weekly rented rooms
Will make a pretty yearly sum,—
Build it for cleanliness and health,
And judge it wisdom well to build,
Lest—foul miasma blast your wealth,
And that—your lodgings may be fill'd.

Build it for comfort, ay and pleasure,
For winter's warmth, and summer's cool,
With reading-room for evening leisure,
And—why not chapel, hall, and school?
The good mechanic's homestead-college
Where, with his homely flock and friends,
Work over, he may feed on knowledge
Or gather up its odds and ends.

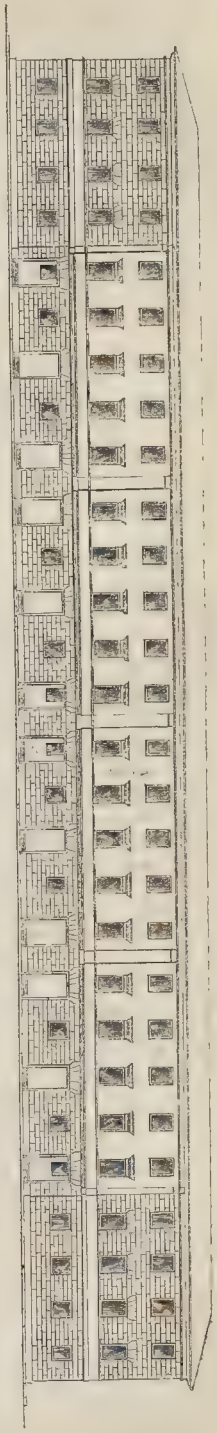
Better than shop-fronts, gaudy-gay,
Better than mansions, let or sold,
Will such a wise investment *pay*,
And prove a mine of good and gold;—
Of good,—for so shall honest men
In healthy dwellings live content;
Of gold,—your well-used money then
Shall yield the builder cent. per cent!

M. F. TUPPER.

DRAINAGE WORKS IN ALTRINCHAM CHESHIRE.



ALTRINCHAM is a small town of about 7,000 inhabitants, situate in the county of Chester, and distant from Manchester about eight miles. The Public Health Act was applied there (upon petition) some time ago, and the local board have just completed their works of sewerage.



Egg-shaped pipes have been used throughout, the largest 25 inches by 18 inches, the smallest 6 inches by 4 inches.

There are public sewers to the extent of 7,041 lineal yards, laid at an average of 8 feet deep; the total cost, including gullies, manholes, engineering charges, superintendence, &c. 2,984*l.* 15s. 6d. or about 8s. 6d. per lineal yard. Brick sewers, large enough for a man to go up, would have cost very much more, of course; and we have now to see how these will act: at present, we are informed, they are working successfully.

The private drains, at an average of 6 feet deep, extend to 1,747 lineal yards, complete as above, and have cost 251*l.* 2s. 4d. or an average of about 2s. 10½d. per yard.

The local board are wishful to construct water-works for the district, and are in treaty with the Earl of Stamford for land, the water of certain springs, &c. The water will require to be pumped about 120 feet vertical. The estimated cost is 7,000*l.*

HOUSES FOR THE WORKING CLASSES, AT FLORENCE.—Signor Enrico Guidotti, Architect.

ON THE INFLUENCE OF SOME EXTERNAL AGENTS ON THE DURABILITY OF BUILDING MATERIALS.*

OF late years attempts have been made to cast doubts upon the correctness of the generally received opinion, that it is essential to place stones on the same bed as they occupied in the quarry. With some few stones when in place, it may be true that the position of the layers is a matter of indifference; for the roche de St. Cloud, and the Villebois stone of the neighbourhood of Lyons, amongst the secondary and tertiary limestones, have been employed without reference to the planes of bed for many centuries without inconvenience. But these cases are decidedly exceptional; and, even in them, the powers of the stone to resist a crushing weight are less when it is applied in a direction parallel to the beds, than when it is applied transversely. In almost every other case it will be found that when stones are used the wrong way of the bed, to employ a workman's phrase, they disintegrate in parallel plates. Great care requires to be exercised to ascertain the precise direction of the natural beds, because many stones present the appearance of inclined planes of deposition, which cut the beds and joints under every modification of angle. When, from the stones having been worked in the quarry, it is difficult to ascertain the precise bed, it is possible that the mason may be misled by the greater facility with which they work in one direction, and may mistake this cleavage for the real bed. The only remedy appears to be to cause the stones exposed to this danger to be marked in the quarry, but, fortunately, the examples of its occurrence are rare.

The principal danger of exfoliation arises from the expansion of the moisture contained in the stone, under the influence of frost; and a very elegant process was invented by M. Brard, for the purpose of ascertaining the probable extent due to this cause. M. Brard, in his experiments upon the resistance of stones, caused them to be boiled for half an hour in a saturated solution of the sulphate of soda. They were then withdrawn and allowed to stand in a flat vessel, at the bottom of which was a small quantity of the same solution. The first efflorescences were washed off, and the degradation of the stones during the next five or six days, under the effects of the continued efflorescence, were taken as an indication of the probable extent to which they would be affected by frost. In the first volume of Rondelet's "Art de Bâtir," page 307 (ed. 1842, Paris), M. Brard's process is described in detail; but some very curious experiments recorded in vol. 7, 1re. "Série des Annales des Ponts et Chaussées," by M. Minard, together with an article by M. Vicat, inserted in the same volume, throw very considerable doubts upon the exact amount of dependance to be placed on its indications. M. Vicat, indeed, very properly observes, that it still remains to be proved that the expansive action of water in freezing is identical with that of crystallization, which can only produce energetic effect at temperatures between 68° and 86° Fahr. According to this very accurate observer, stones which are exposed to a southerly aspect, on the north of the equator, are more affected by frost than those exposed to the north; and the most efficient protection to materials of this description of a porous nature is a coating of oil paint, or any other fatty pigment which prevents moisture from being driven or absorbed into the stone. M. Minard recommends that stone should be quarried in the spring, and not employed in a building until it has been exposed to the effects of one winter at least.

In many varieties of the oolites, the fossil shells are to be observed left in high relief upon the surface by the decomposition of the materials in which they were embedded; and in Bath stone the veins of calcareous spar frequently become detached. It appears that the cause is the same in both cases, and that the shells and the veins protrude in consequence of the resisting powers of the more perfectly crystallized carbonate of lime, of which they are composed, exceeding those of the amorphous mass in which they are embedded. When nodules of flint or chert occur in the numerous varieties of carbonate of lime, the stone around them is usually more durable than the general mass of the rock, doubtless because it contains a portion of the silica in combination with the lime. It is known, indeed, that the application of a solution of soluble silica will at all times add much to the durability of the purer carbonates of lime; but it is very desirable that the conditions under which such a solution should be employed should be made the subject of close and careful experiments.

There are some varieties of arenaceous limestones and sandstones with calcareous cements, and a very remarkable silicious deposit to be met with in the upper secondary and tertiary formations, which may eventually serve to throw light upon the chemical changes produced by the atmosphere, in consequence of the very decided character they assume. For instance, the sandy beds of the Kentish rag perish in consequence of the mechanical removal of the sandy cement which binds together the particles of limestone. The grès or sand stones of Fontainebleau and Windsor forest as frequently decompose in consequence of the removal of their calcareous cement by moisture, or by the action of the air; whilst the silicious beds of the lower chalk appear likely, from Mr. Way's experiments, to furnish materials of inestimable value to plastic art, and also afford a convenient and economical supply of the soluble silica required to compensate the deficiencies in other more generally employed materials.

With respect to the gypseous formations, it appears that where they occur in sufficient abundance to be used as ordinary building materials, they absorb moisture from the atmosphere with extraordinary facility; while they decompose with such rapidity that the municipal authorities of Paris have forbidden their being used for the walls of houses. Occasionally, however, rubble plaster stone is used for enclosure walls, but it rarely lasts more than from twenty to thirty years, when exposed to the weather near Paris. The cause of this rapid decay, according to Gmelin, is to be found in the fact that the sulphates with an earthy base (gypsum being a sulphate of lime) are soluble in water. It is also to be observed that many of the gypseous deposits, especially those found near Paris, are impregnated with an extraordinary proportion of organic matter: this decomposes on exposure to the air in warm and damp positions, and gives rise to the formation of nitrous salts to such an extent, that the saltpetre used by the French powder manufacturers during the last war was almost entirely obtained from cellars constructed of rubble masonry set in plaster in the style usually adopted in France. It is possible that the gases which are present in rain water, or in the atmosphere, may give rise to a species of decomposition by relative affinity, in combination with the sulphuric acid of the gypsum.

Atmospheric influence upon bricks, tiles, and other building materials obtained by the burning of plastic clays, depends very much on the chemical composition of the clays, and on the degree of burning. Thus any distinct portions of limestone present in them would be converted into quick lime in the kiln, and when the bricks were thoroughly wetted would expand in such a manner as to disintegrate the mass. If the clay used is too poor, that is to say, if it contains an excess of sand, the bricks will not become sufficiently fused, and upon exposure to the weather their constituent parts will separate. It is to be observed that in bricks, as in stones, decomposition does not take place with the greatest rapidity where constant moisture exists, but rather where, from the influence of capillarity, variable according to the moisture furnished by the atmosphere either directly or indirectly, a series of alternations of dryness and humidity prevail. The foundation walls of buildings do not, in fact, suffer so much in the parts immediately upon the ground, as they do in those at a height of from 1 to 3 feet, according to the permeability of the materials employed. When bricks made of clay containing free silica are laid in mortar, and moisture can pass freely from either one or the other, it may be observed that the edges in contact become harder than the body of the bricks. No doubt this arises from the formation of a silicate of lime and alumina, the lime being furnished by the passage of the water through the bed of mortar.

Upon limes and cements the effects of the atmosphere are very marked, although at present they are considered to be of far less importance than formerly. All the materials of this class, whether the hydraulic, or the rich limes, the cements, or the plasters properly so called, have a remarkable avidity for water, and abstracting it from the surrounding atmosphere assume the form of hydrates. If these occur in the conditions requisite to enable them to pass into the carbonates, or sulphates, a species of confused crystallization or aggregation takes place. But it must be evident, from what was said in the commencement of this notice, that the quantity of carbonic acid gas the atmosphere is capable of furnishing within a moderate period is exceedingly small, and the theory that limes or cements harden originally by the absorption of that gas and the consequent conversion of the lime into carbonate of lime must be abandoned. There can be no doubt but that the conversion of the lime into the carbonate must increase its cohesion, but the rapid setting, to use a workman's phrase, cannot be accounted for in this manner. It appears, so far as we are able to judge in the actual state of applied chemistry, that mortars harden in consequence of the formation of an insoluble silicate of lime and alumina, the silica being either furnished by the limestone itself, or by the sand, pozzolano, or other ingredient mixed with the slacked lime. When the setting has been once effected, the absorption of carbonic acid gas from the atmosphere may tend to harden a thin external film; but the very perceptible character of this film militates against the supposition that the cause producing it can act upon the interior of the mass.

Nevertheless, the numerous classes of limes, cements, and plasters, exhibit very marked differences in their manner of resisting the action of the atmosphere. The purer carbonates of lime when used for the preparation of mortar, are excessively soluble in water; and if the mortar obtained from them be much exposed to the weather, or to the action of running water, it will be rapidly removed. The argillaceous limestones, on the contrary, furnish the elements necessary to form an insoluble double salt of lime with the silica and alumina; and if the mortars made from them be protected from running water during the period required for their setting, the action of either weather or running water subsequently will rather tend to increase their powers of resistance. The practical lesson to be drawn from these facts would appear to be, that none but the limes obtained from argillaceous limestones should be employed in damp situations. With respect to the use of plaster, the observations before made upon the gypseous stones will apply here perhaps with even greater force. Indeed, the marked difference between the external aspects of the applied plaster and the natural stone, would show that in the process of calcination some element we are unable to ascertain must be driven off. It may be that the burnt plaster yields more readily on account of the absence of this very element; but certain it is that plaster of Paris very rapidly decays when exposed to the influence of the atmosphere.

Temperature appears to act in a distinct manner upon limes and cements, for if they are used in summer, without the adoption of any precautions to defend them from the sun, they invariably crack; and of course, if their water of crystallisation becomes frozen in winter, the whole mass will disintegrate. The more rapidly limes or cements solidify, the more they appear to be exposed to the danger and inconvenience of cracking in warm weather, and it would appear that the most favourable condition for their resistance is when a certain degree of uniform moderate dampness prevails. It must also be observed, that sea air has a marked influence upon the durability of some limes, because the minute particles of sea-water it contains hold in solution many salts with which free lime has more affinity than with silica.

The decay of wood superinduced by atmospheric action, is affected by a different class of phenomena from those which tend to destroy

* See p. 338, *ante*.

stones and metals, namely, those connected with organic chemistry; although, at the same time, the changes produced by inorganic elements are as powerful in the one case as the other. From the day when wood is felled to the day it is used, it requires care and attention, and when it is in place, precautions should still be taken to insure its durability. Currents of air which are either renewed with too great rapidity, or are too dry, a temperature too elevated, constant moisture at high temperatures, alternations of dryness and humidity, absence of ventilation producing wet rot, the accidental transport by the atmosphere of the seeds of certain cryptogamous plants producing dry rot, and the attacks of insects, together with the fermentation of the sap of the trees, may be cited amongst the numerous sources of danger from which it is necessary to secure wood either when in store, or when employed.

When wood is exposed to frequent currents of air, especially at high temperatures, the moisture it contains evaporates too rapidly, and gives rise to cracks and fissures which either destroy the resistance of the material, or open a passage for the water contained at other times in the atmosphere to penetrate to the interior of the mass. If the temperature to which wood is exposed, whilst any sap remains in it, is too elevated, the vegetable fluids ferment; the tenacity is diminished, and when the action is carried to its full extent, the wood quickly becomes affected by the dry rot. Exposure to the atmosphere in positions where rain can lodge in quantity, contact with the ground, and application in damp situations deprived of air, will render wood liable to the wet rot; and however well seasoned it may have been previously to being brought within the influence of any of these causes, it will infallibly suffer. It is, therefore, of the highest importance, that, whether in the merchants' stores, or subsequently, when placed in a building, wood should be preserved from contact with the ground, and that air should have free access to it in every direction. The germs of destruction are often communicated whilst the wood is in store from neglect of these simple precautions: if they be once implanted, the progress of decay can never be subsequently arrested. It has been supposed that keeping wood in water tends to prevent the commencement of dry rot, because in that position the sap is washed out of the pores. If this theory is correct, it must be evident that the oftener the water is changed, the greater will be the probability of its producing the desired effect, because, if it be allowed to stagnate, it must become saturated with the sap in course of time, and unable to take up any additional quantity which may be present. Duhamel observed, that if wood were immersed immediately after it was felled, it would be less liable to decay than if put in water at a subsequent period: he also found that immersion tended to preserve the wood from the attacks of insects, and even to arrest the progress of some kinds of decay, but that a notable portion of the strength was lost. The drying and seasoning take place with greater rapidity after immersion, probably because the water displaces the sap, which does not evaporate so rapidly as the thinner fluid. Duhamel asserts that the process of charring the ends of posts, &c. built into the ground, is very inefficient, and that it is only of use to the extent of interposing an extraneous substance between the wood and the earth: in his opinion, it would be better to enclose the lower ends in sand, stone, cinders, or other materials, which would easily carry off the water supplied by the surrounding media.

When wood is converted and placed in a building, its durability may be greatly increased by covering it with a coating of paint, or other substance which will prevent the moisture of the atmosphere from obtaining access to it. But it is essential that the wood so covered should be free from sap, or internal moisture, or the very perfection of the coating will be found to accelerate its decay. Care must be taken to prevent water from finding its way into the joints; and if the wood be exposed directly to the action of the sun, it should be painted of a colour able to reflect rather than to absorb heat. It is desirable that it should be planed before being painted, in order that the paint may be applied in an equal manner over the surface. It is important also to observe, that the moisture in the atmosphere not only affects the volume of the wood, but frequently alters the position of the fibres by producing a torsion analagous to that which may be observed in hygrometric cords.

Of late years the processes of Kyanizing, creosoting, and immersing timber in solutions of mineral salts, have been applied with various success for preserving it from rot and the attacks of worms or ants. Of these, Kyanizing, which employs a solution of deutochloride of mercury, appears to be most satisfactory; and among some striking illustrations of its results may be cited the fence of the Regent's-park, the posts of which were inserted in the ground without being painted, at least eighteen years since, and remain at the present day in very tolerable condition. For railways and harbour works, English engineers appear to prefer the system of creosoting, or immersing the timber in the rough oil of tar, until it has absorbed at least seven or eight pounds per cubic foot. The difficulty of injecting so large a quantity of oil is overcome by exhausting the sap and moisture from the wood in vacuo, and then forcing in the oil under great pressure: a species of artificial drying is, however, frequently necessary, and indeed the success of this process appears to depend entirely upon the extent to which the original moisture is withdrawn. Both corrosive sublimate and oil of tar are capable of resisting the causes of decay communicated by the atmosphere, and the latter is said to be an effectual preservative against the attacks of boring animals; but it is to be feared that the ordinary manner of applying them does not insure their penetration to a sufficient depth to attain the objects desired. The use of the sulphate of copper, and of the other metallic salts has hitherto been unsuccessful.

In the bent timber bridges which have been constructed on some of the recent lines of railway, although every ordinary precaution was taken in selecting the timber, immersing it in solutions of the metallic salts, and in painting it when in place, the wet rot has exhibited itself in so many instances as to render it almost necessary to abandon a system which appeared to have many recommendations. It is, however, to be observed, that these bridges decayed solely because their elasticity caused them to yield upon the passage of every train. The play thus produced caused the joints to open; and moisture, furnished by rain or the condensation of vapour, found its way into the interior of the beams. The failure of the bent timber ribs in such situations does not, therefore, in any manner affect the propriety of using that construction on more suitable occasions. A valuable lesson is, however, to be learnt from the above fact, viz. that it is difficult, if not impossible, to protect complicated systems of carpentry from the effects of the atmosphere, when exposed to the occasional action of heavy loads able to produce a disturbance of their main parts.

In the theatre at Munich a soluble glass was applied to the woodwork and scenery for the purpose of preserving, and, as far as possible, rendering them incombustible.* This glass was in fact a solution of free silica in caustic alkali; and if the wood was properly seasoned, there can be no doubt of the value of the application, especially if it was injected under pressure. Professor Way's researches into the silica beds of the lower chalk prove that a solution of this nature could be obtained easily and economically; and the advantages it offers certainly render its application desirable.† G. R. B.

Extensive New Building for the Tower Hamlets Militia.—On Thursday, at the meeting of Middlesex magistrates, the county treasurer made a representation to the court that he had been informed by the clerk of the Liberty of the Tower, that the sum of 14,500*l.* would be required for the erection of store-houses and dwellings for the two regiments of Tower Hamlets militia. This matter was referred to the committee for financial and general purposes.

* This process was first suggested in the *Builder* several years ago.

† To be continued.

THE EDUCATIONAL EXHIBITION.

Having in view the very interesting and instructive character of the Educational Exhibition, now opened at St. Martin's-hall, in Long-acre, by the Society of Arts, we are anxious to commend it to the attention of all persons professionally or otherwise concerned in education. The exhibition illustrates the actual condition of education, not only in the United Kingdom and in some of the colonies, but also in France, Belgium, Holland, Norway, Sweden, Denmark, Germany, Switzerland, Spain, and the United States; and is highly suggestive of improvements in the modes and means of public and private instruction. It is very desirable that all persons engaged in education, and especially the teachers of normal and elementary schools, should be enabled to profit by the advantages which this Educational Exhibition is calculated to confer upon those who carefully study it; and it is to be hoped that the civil authorities, ministers of religion, patrons, and managers of schools, and all persons of authority and influence, will promote the making of arrangements which may enable scholars, tutors, governesses, schoolmistresses, and others engaged in education, to resort to London, and to visit the Educational Exhibition before the 31st of August next, when it will close.

PROVINCIAL NEWS.

Yarmouth.—The inhabitants are grumbling a good deal about the delay in opening the new bridge, the balancing of which, it would appear, has not even yet been adjusted. It is said to be now about four years since the work was begun; and for months past it has always been about to be opened. There must be some bungling in the arrangements. The bridge, as we have already noted, is on the tubular principle, and opens upwards in two leaves, the iron balances being originally so adjusted, that when the leaves are raised the balances meet the surface of the water, when the difference of specific gravity is so great that it requires double the number of men to complete the raising; and again in lowering, the pressure of the water is so great that almost as much difficulty is found in getting the ballast out of the water. This appears to be rather an awkward state of matters.——A new Independent chapel is about to be erected at the corner of King-street. The first stone, according to the *Norfolk Chronicle*, will probably be laid forthwith by Mr. Peto, M.P.

Norwich.—The tenders for fitting up the galleries and seats in the Hall, St. Andrew's, for the Norwich festival of September were delivered on 12th inst. and are as follow:—

Messrs. Lucas, Brothers	£297	0	0
Stannard (Norwich)	210	0	0
Griffin	205	0	0
G. Lacy	185	0	0
Gilbert (accepted)	174	17	0

Architect, Mr. E. E. Benest, city surveyor. Quantities not supplied.

Market Rasen.—The commissioners of the Bawtry and Hainton turnpike trust a short time since advertised for tenders for the building of two bridges, one over a small stream at Market Rasen, the other over the river Rase, at West Rasen. The following tenders were sent in, viz. for the West Rasen bridge:—

Sanderson (Rasen)	£691	0	0
Hewitt (ditto)	681	0	0
Kirk (Lincoln)	578	0	0

For the Market Rasen bridge:—

(Sanderson (Rasen)	£250	0	0
Chapman (ditto)	200	0	0
Kirk (Lincoln)	216	0	0

For both bridges:—

Croft (Gainsborough)	575	0	0

Swindon.—On Tuesday in last week, the Church of St. John the Evangelist, lately erected at Swindon, in the parish of Wombourn, was consecrated by the Bishop of Lichfield. The edifice, which is of the Early Geometrical style of English architecture of the thirteenth century, consists of chancel 22 feet by 18 feet, nave 65 feet by 20 feet, and north aisle 65 feet by 10½ feet, and affords accommodation for 400 worshippers in open pews on boarded floors. It is built entirely of red sandstone, with yellow

stone dressings externally, from the quarries at Gornal. The aisle is divided from the nave by five bays or arches. The whole of the pillars and arches inside are of deep red stone. The roofs, which are open, with the framed timbers exposed, are principally covered with brown tiles. There is a stone bell-cot over the west gable. The chancel, which is elevated, is partly laid with encaustic tiles, and the aisles are laid with chequered pavement. The churchyard is enclosed with a stone wall, and a lich-gate is intended to be erected over the principal gateway. The cost of the church, including churchyard walls, has been about 1,400*l.*

Evesham.—On Monday before last, the tenders for the new bridge over the Avon were opened at a meeting of council, when the tender of Mr. Taylor, of London, was accepted, being for 8,865*l.* odd. Several other tenders were sent in.

Ledbury.—Great improvements, according to the Worcester papers, have been made during the last few months in the works and plant belonging to the Ledbury Gas Company: old and inefficient mains have been taken up and new ones of larger dimensions substituted, additional mains laid down where wanted, and the gasometer is being enlarged.

Hanley.—The new church of St. Luke (Wellington district church), was consecrated on Thursday week. It is in the Decorated style, and is built entirely of stone from the Werrington quarries. It consists of nave, 69 feet long and 24 feet wide; north aisle, same length and 15½ feet wide; chancel, 22½ feet long and 20 feet wide; north porch, and the base of a steeple at south-east angle of nave. The character of the church as to its proportions is broad and rather low. The nave and aisles are divided by a range of pillars and arches; and the chancel and tower also by arches from the nave. The interior is fitted up with open seats of deal, stained; and the roofs are also of open timber, stained. The chancel is laid with Minton and Co.'s encaustic tiles, given by Mr. H. Minton, in addition to a subscription of 100*l.* towards the church. A gallery for children runs across the west end, and is approached by a stone staircase from the outside, enclosed in a turret, which is carried up above the roofing of the church, so as to form a feature in the composition, and is surmounted by a vane of copper gilt. The windows are all filled in with tracery of a simple character. All the gables are surmounted with stone crosses. The roofs outside are covered with tiles arranged in pattern, as are the aisles inside. The edifice will accommodate (including the children's gallery) about 670 persons. The cost of its erection is about 1,900*l.* exclusive of warming and fencing (not yet done), and architects' commission. The architects are Messrs. Ward and Son, of Hanley. This is the second church consecrated in the district within the last six weeks, and built from designs by the same architects. The carvings were executed by Mr. G. Gladwin, of Penkhull; and the font by Mr. Hodsman, foreman to Messrs. Heap, Naylor, and Co. Southowram, near Halifax, the contractors for the completion of the building. There is a deficiency still in the building fund.

Cheltenham.—The foundation-stone of the new Roman Catholic Chapel in St. James's-square was laid in week before last.

Llanvair Waterdine.—On 4th inst. the new parish church here was opened by the Bishop of Hereford. It has been erected from the designs and under the superintendence of Mr. Thos. Nicholson, architect to the Hereford Diocesan Board, and is in the Decorated style, consisting of nave and north aisle, divided from each other by an arcade of four arches and pillars, a chancel, separated from the nave by a moulded arch, a vestry, and a turret at north-west angle of nave, surmounted with a spire. The roofs are all exposed to view, and are of trussed-rafter form, stained and varnished. The benches are open, and are in part free. The church is capable of accommodating 250 persons, wholly on the ground-floor, galleries having been avoided. The space within the communion-rail and the aisle to it are laid with Godwin's encaustic tiles, and inlaid with Early English and various other devices, manufactured for the edifice at Lugwardine. The windows are filled with Powell's stamped quarries, with enriched borders. The building was executed by Mr. Jones, of Brecon.

Newcastle-under-Lyne. — The new covered market here is now completed, and was formally opened on Saturday in week before last. The principal front to Penkhull-street is in the Elizabethan style of architecture, in red brick chequered with blue, and has Hollington stone dressings. An oriel window stands in relief, with the doorway immediately beneath. The building, which is surmounted by a castellated parapet and gable, is three stories in height, and has a frontage of 41 feet. On the ground-floor are shops. The first floor contains two rooms, let as offices. These rooms are 13 feet 6 inches high, and the larger one is 25 feet square. The rooms on the second floor are also to be let for offices. The market is in three divisions, separated by flights of steps. The first division is for butter, eggs, poultry, and fruit. This division is 80 feet long, 40 broad, and 30 feet in height. The central market is approached from the above by a flight of twelve steps, and is fitted up with stalls for the sale of provisions and light wares. It is 60 feet long, 53 wide, and 30 feet high. The butchers' market is next approached by a similar flight of steps. It is fitted up with stalls, &c. for forty-seven butchers. In this market are also two fish stalls. This division is 101 feet long, 53 feet broad, and 36 feet high. The whole of the walls are strengthened and relieved by Gothic arches and buttresses. The roofs are of wrought iron. The markets are lighted by longitudinal turrets, with alternate sashes and glass louvres. The roofs of the central and butchers' market are in two spans, and are supported by a single row of columns and girders, in the perforations of which are shields emblazoned with the borough arms. The whole of the ironwork is painted light blue, relieved with narrow stripes of white. In connection with the building is the out-pensioners' armoury (a fire-proof erection, which is already occupied) and the sergeant's house. The buildings are all slated, with the exception of those fronting the streets, which are covered with ornamental tiles. Mr. Robert Chapman, of Newcastle, was the contractor for the works, and, it seems, also designed them.

THE LONDON SMOKE ACT AND THE FIRST OF AUGUST.

IT is a legal fiction that every one knows the law. As matter of fact, very few know anything about it. Let us, therefore, deserve the thanks of the community by telling them that Lord Palmerston's Smoke Consumption Act for London, the penalties of which are to come in force from the 1st of August, applies not only to smoke, but also to offensive effluvia. Tripe-boilers, catgut-makers, candle-makers, gas manufacturers, vinegar-makers, whitening-makers, bone-boilers, and a vast number of other very industrious persons who have hitherto been poisoning the lieges, had better lose no time in sweetening their processes, or in getting a handsome balance at their bankers' to meet heavy penalties.

The following is a short statement of the provisions of this—we hope that we may soon call it, very valuable—Act.

Section 1. After August 1, 1854, every furnace of a steam-engine, and furnace of every mill, factory, printing-house, dye-house, iron foundry, glass-house, distillery, brew-house, sugar refinery, bakehouse, gas-works, water-works, or other building used for trade or manufacture, is to be so made or altered as to consume its own smoke.

And if any person shall, after that day, use any such furnace not made to consume its own smoke, or shall so negligently use such furnace as that its smoke shall not be consumed, *or shall carry on any trade or business which shall occasion any noxious or offensive effluvia, or otherwise annoy the neighbourhood or inhabitants*, without using the best practicable means for preventing or counteracting such smoke or other annoyance, the offender, being owner, occupier, foreman, or other person employed, shall forfeit for the first offence from 40*s.* to 5*l.*; second, 10*l.*; third, 20*l.*; fourth, 40*l.* and so on, doubling every time.

But glass-works and pottery-works, established before August 20, 1853, are exempted, except as to steam-engine furnaces and slip-kiln furnaces.

Section 2. Steamers on the Thames above London-bridge are to consume their own smoke under the same penalties.

Section 3. Justices may remit penalties on proof that smoke is consumed as far as possible.

Section 4. Police constables may enter buildings and steamers and examine furnaces. 20*l.* penalty for obstructing them.

Section 5. No information to be laid for a penalty under the Act, except under the authority of the Home Secretary or the Commissioners of Police.

Section 6. "Metropolis" to mean the same as in the Metropolitan Burials Act, 15 & 16 Vict. c. 85, taking in the cities of London and Westminster, Southwark and neighbouring parishes as far as Hampstead, Islington, Stoke Newington, Bow, Bromley, Woolwich, Clapham, Camberwell, Streatham, and Putney.

Section 7. City Sewers and Whitechapel Improvement Acts not to be affected.

Section 8. Penalties to be recovered under 11 & 12 Vict. c. 43, so that they must be sued for within six months after the commission of the offence.

SURVEYORS' FEES.

LOCKWOOD *v.* AMOR.—This action was brought in the Marylebone County Court, before Mr. J. L. Adolphus, to recover 5*l.* 12*s.* 6*d.*

Mr. Keene, solicitor, appeared for Messrs. Lockwood, surveyors, and Mr. Herring was for the defendant, who described himself as a surveyor and house-agent.

Mr. Lockwood stated, that Mr. Parker, who was clerk to the defendant, called at witness's office, and informed his clerk that Mr. Amor had a house of his own, at 3, Hinde-street, which he wanted surveyed. He accordingly surveyed the house, which was a large one, and his estimate of the dilapidations came to 26*l.* 7*s.* 3*d.* His charge was 2*l.* 2*s.* for the survey, and five per cent. upon the estimate, and the remainder of the claim was for fair copy of estimate, specification, and other matters appertaining to the survey. The charge was fair and usual.

By Mr. Herring.—The defendant's clerk did not say that Mr. Amor was a surveyor, and could take the survey himself, but the house being his own, he wanted a disinterested party to take the survey. It was not agreed that witness should take the survey for one guinea—would not have accepted the offer.

Mr. Parker, architect, gave it as his opinion, that the claim was fair, and less than what he should have charged.

Mr. Herring contended that the charges were exorbitant. His client was a surveyor and neighbour of the plaintiff's, and thought it a neighbourly action to offer the plaintiff a guinea for the survey. It turned out that plaintiff's services were valueless, and that he had charged over and over again for the same work. Of what use was a survey without a written copy of it? The two guineas charged for the survey were amply sufficient, without adding charges for written copies of it. His client had paid 2*l.* 12*s.* into court in full satisfaction.

Mr. Parker, managing clerk to the defendant, said he called at the plaintiff's office, and gave the clerk to understand that Mr. Amor would pay one guinea only for the survey, as he could do it himself, but felt a delicacy, as the house was his own. Went over the survey with Mr. Lockwood, and it did not occupy more than two hours.

By Mr. Keene.—They profess to be surveyors. Had heard that Mr. Amor had been a fishmonger. Considers the charge high. Mr. Amor calls himself an architect and surveyor. Mr. Keene commented upon parties styling themselves surveyors, and acting as such, when in reality they knew nothing about the profession. He urged that the evidence of Mr. Parker, the architect, who was brought up to the profession, and who swore that the charge was fair and customary, was deserving of more weight than the opinion of the fishmonger.

The Judge said, it appeared a very large sum for the business done, but he was of opinion that surveyors were entitled to charge for survey, estimate, specification, &c. separately. He should, however, deduct, 1*l.* 1*s.* off the commission. Verdict for plaintiff accordingly, with costs.

BOSTON CEMETERY COMPETITION. — The first premium has been awarded to Messrs. Pritchett and Son, of York; and the second to Mr. Barry, of Liverpool.

THE METROPOLITAN SEWERS COMMISSION.

At a vestry meeting of St. Marylebone, on Saturday in last week, Sir B. Hall announced that the Home Secretary intended to introduce the representative system into the Metropolitan Sewers Commission continuance Bill, as well as ultimately when the general subject of metropolitan corporate or municipal reform was carried out; that his lordship proposed that six commissioners should be appointed by the Government and six by the metropolitan members of Parliament, who, together with a paid chairman as heretofore, would constitute the Metropolitan Sewers Commission during the temporary continuance for another year. Among the clauses which would be introduced into the new Bill was one that separate accounts should be kept of the sewage of the metropolis and its expenditure for the north and the south side of the Thames. The main trunk sewers, projected under the sanction of Sir R. Stephenson, Sir W. Cubitt, and other engineers, were to be carried out. These reports and plans were now out, and a sum of 300,000*l.* was proposed to be raised for the construction of these great main outlets to the sewage of the metropolis. Sir Benjamin stated that Lord Dudley Stuart and he desired the parishes of Marylebone to select their own representatives at the new board, and arrangements are being made to that end.—A special court was held by the present Commissioners in the beginning of this week, at which it was stated, in a return read by the secretary, that during the last twelve months, there had been constructed 177,571 feet of brick sewer, or nearly 34 miles, and of pipe sewers there had been laid down 31,894 feet, or about six miles, making a total for the year of about 40 miles of new sewers, and that it would be recollected, that last year it was reported that 43 miles of new sewers had been executed; so that during its two years of office the commission had constructed 84 miles of sewerage works. Now, the cost of the 40 miles length of sewers was 160,929*l.*; the cost of repairing sewers was 10,353*l.*; cost of side entrances, air shafts, gulleys, &c., 11,304*l.*; cleansing, 19,865*l.*; incidentals, 5,704*l.*; making the total sum expended on works during the last twelve months, 208,155*l.* Moreover, there were in hand now very large contracts.

BUILDERS' BILLS: STATUTE OF LIMITATIONS.

In the Westminster County Court, an action was brought by a builder and surveyor, named Foreman, against Baron Lionel Rothschild, M.P. for the City of London, to recover the sum of 31*l.* In December, 1845, the plaintiff was engaged by the late Baroness Rothschild, wife of the defendant, to effect an alteration in the orangery at their seat at Ealing, for which the contract was 200*l.* One part of the alteration was to remove the slate roof and substitute glass, the plaintiff, as usual, deeming the old materials to be his property. He was afterwards required to survey and give in an estimate for alterations at the town residence at Piccadilly. On plaintiff requesting the slates, he found they had been used; and on presenting a receipt for 20 guineas (his charge), defendant put down 10*l.* which plaintiff took up, and with the receipt, walked away without giving an acknowledgment. Plaintiff's demand for the retention and value of the slates was 20*l.* which, with 11*l.* he considered he ought to have been paid in addition to the 10*l.* mentioned, amounted to the sum he sought to recover. The defence set up was, that the claim for the slates was not valid, and that the claim had been made for work done more than seven years ago. The judge said not only was the plea of the Statute of Limitations fatal, but that the plaintiff, having received the 10*l.* after this charge was demurred at, did so in liquidation of all demands.

Notices of Books.

Sound and its Phenomena. By the Rev. Dr. Brewer, Trinity Hall, Cambridge. Longman and Co. 1854.

This pleasantly written little book constitutes the first part of a series of lectures on Common Phenomena adapted especially to schools, the industrial classes, teachers, and the mothers of families. It contains much interesting information in regard to musical instruments of all sorts from the bagpipe "cry of a nettle" cut into joints, to the "soul of a violin" and the minute structure and vibrations of the cathedral organ, together with some little information (we wish it had been more) on the subject of resonance in reference to structures, sound reflectors, orchestras, &c. The human voice is pretty fully treated of, together with the voices of birds, and even of reptiles and insects; but the principal portion contains some curious and entertaining information on the subject of wind and stringed instruments, such as reeds and violins, pianofortes, organs, seraphines, accordions, serpents, &c. and an introductory part of several chapters on the laws of sound in general. The type is clear and large, and the book is illustrated with woodcuts.

Miscellanea.

The late Mr. Mackenzie.—Some friends of the late Mr. Frederic Mackenzie, the well-known architectural draughtsman, are endeavouring to raise by subscription a provision for his widow and daughter, who, by the sudden termination of his useful and laborious life, have been left without that moderate competence which his application and talent might have justified them in expecting. It is understood that his want of success in a pecuniary point of view can be ascribed to nothing but the failure of certain enterprises carried on by him in an honourable spirit, and to losses sustained in the benevolent endeavour to assist those who were at the time in a position less prosperous than his own. To these causes may be added the deficiency of profitable employment which Mr. Mackenzie experienced during the last few years of his life, arising from the changes of appliances incidental to those particular branches of the art—topographical and architectural design—from which he was accustomed to derive his principal resources. The Society of Painters in Water-colours have presented the sum of 110*l.* to his survivors; and we sincerely hope that means will be raised to purchase an annuity for the maintenance of his widow and daughter.

Celebration of the Union between England and France.—Being called upon to lend our aid in the promotion of the proposed National Festival in celebration of the union between France and England, —a happy union, even though established in a state of war,—we most willingly do so, as doubtless its originators also do, in no mere heedless spirit of merrymaking at a period of peril and of human sacrifice to which one overweening, self-seeking Moloch devotes hundreds of thousands of his own hosts as well as of those of the curbers of his insane ambition, every soul in either of them just as precious and as life-worthy as his own. There are such things as Solemn Festivals, and this is one. That it may tend to the establishment of a lasting peace and friendship between the two rival nations who are about to celebrate it, is our most earnest prayer and hope. We are glad to hear that subscriptions are coming in from different towns throughout the country as well as from the metropolis, in which the Festival is to be held. The chief difficulty, doubtless, will be to arrange the entertainment most worthy of our distinguished guests, as well as most honourable to ourselves. It is to be hoped that public bodies and influential persons will cordially co-operate with the committee, who appeal to them for aid in the promotion of the objects in view.

New Crystal Palaces.—A crystal palace, it is reported, is to be built at Naples. The king, it is said, has approved of the plan, and pointed out the Villa Reale, close to the sea, as the site.—In the construction of the Berlin Crystal Palace, it appears that 30,000 cwt. of iron and 215,700 feet of glass have been employed. The ground plan is cruciform, the elongated portion, running east and west, 800 feet, and the arms, north and south, 280 feet. The breadth of the transept is 160 feet, the square superficies of the whole 134,400 feet, the maximum height 80 feet, that of the transept 80 feet, and the minimum of the lateral alleys and branches 60 feet. The transept is divided into five parallel alleys by columns 20 feet high, serving as bases to the arches. The materials are, as usual, iron and glass.

Dangerous Crossing in the Strand.—A correspondent, "Humanitas," draws our attention to a suggestion in the *Globe*, that at the very dangerous crossing in the Strand, between Wellington-streets, north and south, a couple of refuges for foot passengers, should be constructed, one on either side of the road. Care, of course, would require to be taken that they should not be of such dimensions as to form any positive obstruction to the traffic. The parish authorities ought to see to it.

Improvements in Bridges.—Mr. Baker, of Chillington Colliery, Wolverhampton, has lately invented some improvements in the construction of railway and other bridges, and the method of lifting them after sinking by mining operations. The invention is said to give greater stability to the bridge, and little or no preparatory work is required prior to the lifting process. The slightest indication of danger from sinking may, it is said, in a short time be remedied, and the bridge can be lifted at an inconsiderable expense, and without much loss of time.

The Iron Trade.—The Birmingham trade correspondent of the *Morning Herald* admits that already "the high price of beams, girders, and other materials has impeded, and, in some instances, suspended, the progress of important building operations in various parts of the kingdom," and adds that "it is desirable to mitigate this evil as much as possible." The *Staffordshire Advertiser* of last week, while intimating that orders have slackened since the declaration of the preliminary quarterly meeting, states that "from America there has been a perceptible decrease in the number of orders, since it became known there that the rates of prices generally obtained (?) would be declared to be the ruling ones, for the Americans can now manufacture iron for less money than they have to pay for the English article, but as yet by no means to the extent of their requirements." The *Cambrian* thus speaks of the recent doings in this trade:—"The advance of 20s. per ton upon iron has been anything but satisfactory, particularly the circumlocutionary way in which it was effected. The meeting of masters resolved that prices should *remain the same*, and in the same resolution they quoted the prices at an advance of 1*l.* per ton upon the three leading kinds of iron. The consequence has been that buyers hardly know how to purchase, whether to insist upon the declaration of the first part of the resolution, or comply with the advanced price in the latter. The resolution is no doubt intended to convey that prices are to remain the same as *were said* to have been obtained during the quarter, and not the duly declared prices of the previous quarter day; but this is held by the trade generally to be a very objectionable mode of dealing with the price of an article so essentially necessary for the manufacturing purposes of the district. This curious resolution was, I understand, the result of a disagreement in the meeting relative to the proposal for an advance. By many masters it was then, and is now, considered highly impolitic, and calculated to injure the trade of this district, and benefit, in a corresponding degree, rival manufactories in other parts where prices are not so extravagantly high."

Manchester School of Art.—The council of the Manchester School of Practical Art have issued a circular to other schools for their co-operation in some arrangement for bringing before Parliament next session the subject of the recent decision of the Government Department of Science and Art, to diminish the grants to provincial schools of art, for the purpose of encouraging a spirit of self-support and local subscription for the sustainment of these schools. The council of the Manchester School have passed a series of resolutions deprecating that diminution of Government grant, and expressive of an opinion that the provincial schools are fully as much entitled to the support of the State as the metropolitan school, which is not aided by private or local subscription at all. The recent withdrawal of the full amount of usual aid by Government, they conceive, will disorganize the committees, and retard the progress of art and taste in the provinces.

Strike of Stonemasons.—On Monday in last week, about a hundred stonemasons in the employ of Mr. Armstead, builder, of Preston, struck work. Their employer, it appears, is erecting a church at Leyland, and a house at Chaigley, and the masons there employed asked for an advance of 2s. a week as extra allowance, as customary when sent out to job-work in the country. The employer declined to apply this principle to the contract work in question. Nearly the whole of the men struck work. A summons was issued against one for breach of contract, but on promise to resume work, the case was not proceeded with. The men afterwards returned to their employment without any advance.

The Polytechnic Institution, Regent-street.—This very useful institution has been somewhat remodelled under the active superintendence of the new resident manager, Mr. J. H. Pepper, whom many of our readers must already know as an able and pleasant lecturer at the Polytechnic. Amongst the numerous novelties now to be seen there, are M. Dubosco's experiments with the electric light, which we early brought under the notice of the public. These include the illuminated iridescent fountain, first exhibited in Paris.

Steam Superseded.—An ingenious Swedish mechanician, Mr. P. Lagergren, has invented a new power engine intended to supersede steam. The moving force is the pressure of the atmosphere, which acts on a vacuum in a copper reservoir connected with two cylinders provided with pistons, as in a common steam-engine. The vacuum in the reservoir is produced by the admission of a certain quantity of alcohol and of atmospheric air each time the machine makes a stroke. Explosive air is hereby produced, is fired at each turn, and instantly burns away: one of the pistons being at the same time opened, an atmospheric pressure is obtained equal to 15 pounds on the square inch.

NEW CLUB-HOUSE, REGENT-STREET.—A general meeting of the members of the Junior United Service Club was held on Tuesday, to ballot for plans for the new house. Those submitted by Mr. T. M. Nelson were adopted. The new club-house is to occupy the site of the present house, at the corner of Regent-street, Waterloo-place, as well as the St. Alban's Hotel, in Charles-street, and the houses forming one side of St. Alban's-place

ARCHITECTURAL EXHIBITION.—Permit me to correct an error into which one of your correspondents has fallen. At page 367, "An Architect," writing on the subject of the Architectural Exhibition, says, "The Architectural Association are now endeavouring to obtain a gallery and to establish an architectural exhibition." This is not the case. The Architectural Association having, in the spring of 1849 and in the autumn of 1850, organised and carried out free exhibitions of architectural drawings (held at the New Water Colour Gallery, Pall-mall), at a public meeting held in Lyon's-inn Hall shortly after the close of the Exhibition of 1850, handed the entire management of the enterprise over to a committee of the profession, which was then appointed for the purpose, and it is to the exertions of this committee to procure a suitable gallery that, I presume, "An Architect," intends to allude.—THE HON. SEC. OF ARCHITECTURAL ASSOCIATION.

PUBLIC WORKS.—The Board of Public Works are at present busily employed. The old mansion adjoining Lord Harrington's, in Whitehall, being prepared for the new Secretary at War, the mansion of the late Duke of Leeds, in St. James's-square, and lately occupied by Mr. Lane Fox, has been purchased for the Copyhold Department, the business of which has heretofore been carried on in Whitehall. It is in contemplation to surround the whole of Greenwich Park with an iron railing.—*Advertiser.*

NEW BAPTIST CHAPEL.—The foundation-stone of the new Baptist chapel, Stratford-grove, Essex, Mr. A. Trimen, architect, was laid on the 6th inst. by Mr. Alderman and Sheriff Wire. The Rev. Dr. Angus gave the address, and the Rev. S. Davis, of Bow-road, offered prayer. In the evening a public meeting was held at Rokeby House, at which Mr. Alderman Wire presided, and the Revs. T. E. Stallybrass, B.A. G. W. Fishbourne, pastor, W. Deering, S. Murch, J. Hooper, and J. Woodward took part in proceedings. An additional sum of between 50*l.* and 60*l.* was promised towards the new chapel.

REPORT ON PUBLIC-HOUSES, &c.: OPENING OF PUBLIC INSTITUTIONS ON SUNDAY.—The select committee of the Commons appointed to examine into the system under which public-houses, dancing-saloons, coffee-houses, theatres, and places of public entertainment, are sanctioned and are regulated, have agreed to their report, and placed it before the House. The committee recommend a more stringent system of licensing for public-houses, and the closing of them further on Sundays and at night on week days. In respect to other places of public resort and recreation on Sundays, they state that they think it "expedient that places of rational recreation and instruction, now closed, should be open to the public on Sunday afternoons, at the hour of two o'clock; and that so far as any such places are now closed by the operation of the law, such laws should be so far amended as to enable the Lord Chamberlain, or other competent authority, to determine what places should be permitted to be so opened and for what length of time." They allude to the great advantages that had been derived by the public of Dublin, in consequence of the Zoological Society, in the Phœnix-park, being opened for 1d. admission on Sundays; and remark upon "the incousistency that suffers the singing saloons of Manchester and Liverpool, and Cremorne and the Eagle Tavern-gardens, to be open on the Sunday, and shuts, in the face of all but the proprietors and those who have free admission, the gardens of the Zoological Society, and the vast and varied school of ocular instruction provided within the grounds and building of the Crystal Palace," as "too glaring for continuance." But there are other places of public instruction, they observe, the complete closing of which throughout Sunday seems less excusable, viz. the National Gallery, the British and Geological Museums, and the exhibitions at Marlborough and Gore Houses. It is seldom possible, they remark, for working men, or any considerable part of the fully employed population, except on Sunday, to visit the national institutions without the cost, to them a serious one, of a day's wages. The committee are not aware of any serious difficulty in the way of a register of persons willing to serve on Sundays at such places being kept at the several institutions, and it would not even be needful, they add, that the same persons should attend on consecutive Sundays.

TRIPE BOILERS.—It may be as well for the tripe boilers, not only in Rosamon-street, Clerkenwell, but in the other parts of London, to look at our notice on another page of the London Smoke Act.

ECCLESIOLOGICAL SOCIETY.—At committee meetings of this society, lately held, an application from the Bishop of Brechin about St. Paul's Church, Dundee, was considered, and also the proposed rebuilding of the nave of the Priory Church of New Shoreham. The designs for the enlargement and restoration of St. Chad's, Stafford, by Mr. Ward, were examined. They showed the curious discovery of complete arcades, surmounted by clerestory windows of Romanesque date, embedded and concealed in the present side walls of the nave. It was agreed to advise that these remains should be preserved as far as possible, but that the new work required in the church, and especially the east end of the chancel, should be restored in the Pointed style, in accordance with the remaining buttresses and other details. A sub-committee was appointed to draw up a memorial to the Chief Commissioner of Works in support of the principles advocated in the architect's report on the restoration of the royal tombs in Westminster Abbey.

ST. GEORGE'S HALL, LIVERPOOL.—This magnificent hall is now rapidly approaching completion, and already the public are enabled to form a tolerably accurate idea of its vast size and architectural beauty. Externally it is almost finished, the greater portion of the terraces being flagged over, the broad stone steps perfectly arranged, and in a few days the workmen will have fixed the whole of the stone balustrade which surrounds the hall, as well as the massive double-columned granite pillars which stand at the bottom of the steps opposite the portico, and at that portion of the inclosure where the handsome bronze gates are to be erected. Huge blocks of stone, portions of granite pillars, massive flags, and vast pieces of timber, still cumber the ground, but soon they will be removed, and the noble area in front being cleared, the greatest architectural ornament of our town will stand revealed in all its grandeur. Internally, the numerous workmen daily occupied in the building are rapidly bringing their duties to a conclusion. The beautifully-arranged mosaic floor is nearly completed, and adds greatly to the general magnificence of the hall. It may be described as consisting generally of three circular devices, the central and larger one having its interior compartment occupied by a brilliantly executed emblazonment of the royal arms, surrounded by annular designs, conspicuous among which are a series representative of Neptunian and commercial triumph, executed in yellow and brown encaustic, exterior to which are rings of geometric design in brilliant colours. To the north and south of this central design there are subordinate figures of similar form, the centres of each being occupied by the shield and arms of Liverpool, also in brilliant colours. Exterior to the circles, the floor is tesselated in comparatively sober tones of colour, so arranged as to form a harmonious internote with the bright and telling tints predominating in the narrow or raised platform which surrounds the principal floor, and cuts it off from communicating with the walls. The whole of the galleries are being cleared and painted, and the seats for the spectators placed wherever practicable, though many of them will be evidently useless for those who wish to see what is going on in the body of the hall.—*Liverpool Times.*

SICKNESS.—At the last ordinary meeting of the Institute of Actuaries, a paper was read entitled "Observations upon the Sickness and Mortality experienced in Friendly Societies," by Mr. Henry Tompkins, wherein it was stated that the duration of sickness was in the inverse ratio to susceptibility of attack, as shown in the proportion of persons attacked with sickness. Thus, in the northern parts of England nearly 20 per cent. were yearly attacked with illness, while in the midland districts 30 per cent. were so attacked; but, on the other hand, the proportion of sickness to each sick man in the north amounted on the average to fifty days, while in the midland districts it reached only to thirty-six days; the liability to attack being balanced by the duration, thus making very little difference in the amount of sickness experienced in one part of England when compared with another. The report divided labour into two classes, viz. light labour and heavy labour, and each of these again into the two sections—labour in the open air and labour under shelter; and the results showed a great difference in their ratios of sickness and mortality. The most healthy condition of existence appeared to be "light labour in the open air."

THE LATE STRIKE AT BLACKWALL.—On the 14th, several summonses on assault charges, arising out of the strike at Mr. Mare's establishment, were heard at the Thames Police Court. In consequence of Mr. G. Wyatt, a confidential person in Mr. Mare's employment, having gone to his native town, Plymouth, and brought to town 100 shipwrights, who were employed by Mr. Mare, he had been exposed to much annoyance, and had run the risk of being killed by a missile which narrowly escaped striking him on the temple and seriously injured him. Mr. Mare had offered 20*l.* reward for the discovery of the aggressor, but as yet without success. Three workmen, however, were summoned for other assaults and threats against Mr. Wyatt, and two of them were fined 3*l.* each or one month's imprisonment, and the third ordered to find bail of 10*l.* to keep the peace and be of good behaviour.

WROUGHT IRON FRAMES.—Mr. James Boydell, of Gloucester-crescent, Hyde-park, has invented a method of rolling wrought-iron bars with longitudinal groove at each end suitable for the sliding in of panels of glass or other material; and in order to make them into the proper form for the uprights of the frame of a hand-glass or other such articles, he further rolls them so as to bend into angle-iron.

GILTSPUR-STREET PRISON SITE.—The Corporation of Christ's Hospital have memorialized the City Corporation for the disposal to them of the Compter in Giltspur-street, to make way for an enlargement of the hospital, and for which they have offered 15,000*l.*, or agreed to refer the question of value to the surveyors of the two corporations. The City Corporation, while refusing these offers, have referred the matter to the Committee of City Lands that a farther opportunity of negotiating might be afforded. Mr. COX, one of the City Corporation, said, during the discussion as to this reference, that he would be happy to give 10,000*l.* more than the offered sum, and was sure the property could be disposed of to vastly greater advantage.

THE MONUMENT TO THOMAS HOOD, by Mr. Matthew Noble, erected in Kensal-green Cemetery, was inaugurated on Tuesday, the 18th, when an able address was delivered by Mr. Monckton Milnes, M.P.

ST. MARY'S HOSPITAL, PADDINGTON. — The foundation-stone of a new building, intended for a medical school, in connection with the above hospital, was laid on 12th inst. by Earl Manvers, president of the institution. The building is intended for the reception of 200 medical students. The locality is on the west end of the hospital, with which it will correspond in architectural style. The estimated cost will be 5,000*l.* The architect is Mr. T. H. Wyatt.

TENDERS

Delivered at the Court-house, St. Marylebone, for roads, drains, and sewers, to be formed at the St. Marylebone Cemetery, Finchley.

	Gravel found by Contractor.	Gravel dug on Estate.

ADVERTISEMENTS.

Important Sale of Materials at Islington.

MR. RICHARDS begs to announce that the second portion and final SALE by AUCTION of the valuable MATERIALS of the Islington Cattle market, will take place on MONDAY, JULY 31 and the following days.—Catalogues may be obtained of Messrs. BARR, Esq. Solicitor, No. 1, Lincoln's-inn; the Plower-pot, Bishopsgate-street; and of the Auctioneer, Tottenham.

TO CEMENT AND LIME MANUFACTURERS

MESSRS. DRIVER have been instructed to DISPOSE OF by PRIVATE CONTRACT, valuable MANUFACTURING PREMISES with railway accommodation, erected and made at considerable expense, with kilns, machinery, and steam power sufficient for grinding 1,000 bushels a day, and with every facility for obtaining a supply of coke and all materials for manufacturing Roman, Portland, and Blue Lias Cements. The premises have a very large wharf frontage, and are accessible at all times, and are capable of a great extension of business, and possess peculiar advantages. Also, an extensive Storehouse and Wharf, with a counting-house, above Bridge, London, for carrying on business. Early possession can be had of all the above premises and the business can be taken as at present carried on.—Particulars and full information to be obtained by applying to Messrs. DRIVER, Surveyors, Land Agents, and Auctioneers, 5, Whitehall, London.

IN BANKRUPTCY.—To Builders, Carpenters, Building Material Dealers, and Others.

MR. MARSH has received instructions from the Assignees of Mr. A. J. Horscroft, to SELL by AUCTION, on the PREMISES, St. John's-road St. John's hill, Park Cottage, Union-row, and Wandsworth-road, on THURSDAY, AUGUST 1, at TWELVE o'clock, the BUILDING MATERIALS and EFFECTS, comprising about 32,000 stock and place bricks, Swedish timber, deals, planks, battens, pullogs, quarterage, scantlings, scaffold-poles and boards, work benches, a quantity of lime, slates, Portland, York, and other stone; nails, about 1½ cwt. of white lead, pails, ladders, brush, &c.; also a small quantity of household furniture, and numerous effects.—May be viewed the day prior and morning of sale, and catalogues obtained on the premises of WILLIAM PENNELL, Esq. Official Assignee, 3, Guildhall-chambers, Basinghall-street, and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

NOTTING HILL.—Very valuable Plot of Building Land on the Ladbroke Estate, being the only uncovered spot in this improved vicinity, a portion of the estates of the late William Chadwick, esq.

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions from the administrator to SELL by AUCTION, at GARRAWAYS, on WEDNESDAY, AUGUST 2, at TWELVE, in numerous lots, a very valuable and important PLOT of BUILDING LAND, having a frontage of 272 feet to the Kensington park-road and 138 feet to Ladbroke-road, formerly Weller-street east, Notting-hill, highly eligible for the erection of villas and attached residences, being within a few minutes of the high road to Uxbridge and Lord Holland's park, and the only uncovered piece of land in the vicinity. Separate leases may be had, if required by the purchaser, direct from the freeholder, for terms of eighty-two years at nominal ground-rents.—May be viewed, and particulars had of J. ANDERSON ROSS, Esq. Solicitor, 31, Salisbury-street, Strand; at Garraway's; and of Messrs FARBROTHER, CLARK, and LYE, Lancaster-place.

SKINNER-STREET, SNOW-HILL.—To Ironmongers, Smiths, Builders, Coachmakers, Cabinetmakers, Undertakers, and Others.

MR. BILLINGAY is instructed by Mr. Pettigrew to SELL by AUCTION, without reserve, upon the PREMISES, No. 23, Skinner-street, on WEDNESDAY, JULY 26, and the following days, at ELEVEN for TWELVE o'clock, the STOCK in TRADE, comprising locks, hinge-bolts, wrought and cut nails, files, screws, coffin furniture, carpenters' and other tools, sothes, reaping and hanging hooks, sickles, pulleys, grindstones, a variety of chaff-cutting knives, axle-arms, springs, blister, and spring steel; coach springs, axles, brass-foundry goods, black hollow ware, fry pans, shovels and spades, register stoves and grates, an excellent wrought-iron warehouse crane, and safe; also a few lots of furnishing ironmongery, including cutlery, electro-plate, japanned goods, &c. May be viewed the day prior and on the morning of sale, when catalogues may be obtained upon the premises, and of the Auctioneer to the Metal Trade, 21, Coleman-street, City.

HER MAJESTY'S COLONIAL LAND and EMIGRATION COMMISSIONERS are prepared to engage the services of a few unmarried young men to be employed in the Colonial Survey of New South Wales.

Preference will be given to men from the country districts accustomed to straight line work and fine chaining, and to grooms, carters, bricklayers, carpenters and labourers, especially to such as have been employed as assistants to railway surveyors and engineers.

The men who may be selected will be provided by the Commissioners with a Free Steerage Passage to Sydney, and on their arrival in the colony, with full rations and wages at the rate of 36l. per annum.

They will be chiefly employed in the country districts at a distance from towns, and will have to live in tents whilst engaged on service in the field.

The equipment of the surveyors will be provided by the Colonial Government, and will consist of all the requisites for carrying and cooking their food, and for the ordinary comforts of a surveyor's life in New South Wales. The men, therefore, will be at little expense while in the bush, except for clothes, and they have are most of their wages, which will commence on landing in the colony.

The accepted applicants will be required to sign a bond before they embark, to serve the Colonial Government for three years in the surveying department.

Application to be made at the Office of the Commissioners, on MONDAYS, the 31st JULY and 7th AUGUST, between the hours of Nine and Ten o'clock, and on other days between the hours of Eleven and Four. By order of the Board,

S. WALCOTT, Secretary.

Colonial Land and Emigration Office,
3, Park-street, Westminster, 20th July, 1854.

BUILDERS' FOREMAN.—WANTED, for a permanency, in the country, an active, intelligent Person, about 35 years of age, who has a good general knowledge of the building trade. He must be capable of measuring and working from measuring and taking out quantities. A practical carpenter and joiner would be preferred, as he would occasionally have to fill up his time at the bench. The salary to commence at 30l. per annum, to be increased, and eventually an interest given in the business. No person need apply unless he is thoroughly competent, and can furnish unexceptionable references. Applications to be by letter addressed to Mr. C. SMITH, House Decorator, 43, Upper Baker-street.

COUNTY of WORCESTER.—To ARCHITECTS and SURVEYORS.—Notice is hereby given, that at the next Michaelmas Quarter Sessions of the Peace, to be held at the Shire hall Worcester, in and for the said County, on MONDAY, the 6th day of OCTOBER, 1854, the Justices then and there assembled will APPOINT a COUNTY SURVEYOR, at an annual salary of 175l. such salary to include his travelling and all other expenses. A printed statement, showing the nature and extent of the duties to be performed by the county surveyor, may be had upon application to me. Candidates are requested to forward testimonials as to their character and competency to the office to the Clerk of the Peace, Shire-hall, Worcester, endorsed "The County Surveyor," before FRIDAY, the 1st day of SEPTEMBER next.

WM. NICHOLS MARCY, Clerk of the Peace
Clerk of the Peace's Office, Shire-hall, Worcester, July 15, 1854.

TO EXCAVATORS.

EXCAVATORS desirous of Three Months' EMPLOYMENT in the country, can have further particulars by applying, by letter, post paid, to Messrs. FORD and SONS, Acorn Wharf, Rochester.

LOCAL BOARD of HEALTH for the BOROUGH of BRADFORD.—To SURVEYORS and OTHERS.—WANTED, in the Office of the Surveyor of this borough, a competent person not as CHIEF CLERK and ASSISTANT to the Surveyor. He must be capable of taking levels, and must be a neat and experienced draughtsman. A person having had experience of the method of conducting business in the surveyor's department, under a local Board of Health, and possessing a knowledge of the most approved methods of draining towns, will be preferred. Salary, 120l. per annum.—Applications may be forwarded to Mr. E. W. SHAW, Borough Surveyor, Bradford, stating age and previous occupation, accompanied by testimonials of character and competency, on or before the 24th inst.

By order, W. H. HUDSON, Town Clerk.
Town Clerk's Office, Bradford, July 4, 1854.

TO PLUMBERS

WANTED, a good, practical, WORKING PLUMBER; one who thoroughly understands the business in all its branches may meet with a permanent situation, at liberal wages. State qualifications, &c.—Address, J. HALES, Plumber and House Decorator, Hemel Hempstead, Herts.

N.B. None but good workmen, whose character will bear strict investigation, need apply.

TO GLASSCUTTERS AND GLAZIERS.

WANTED, a Young Man, well acquainted with his business, as Cutter, under a Foreman.—Apply by letter, stating where last employed, references, &c. to A. B. Post-office, Soho. Security will be required.

TO PAINTERS, HOUSE DECORATORS, &c.

WANTED, a FOREMAN who practically understands every department of the Painting, Plumbing, Glazing, and Paper-hanging Businesses, and can measure and estimate for the various works. References as to character and competency will be required to accompany the application, stating the rate of salary required. No application need be made unless a similar situation has been held.—Apply to Mr. H. J. BUCHAN'S House Decorator, No 159, High-street, Southampton.

WANTED, in a Builder's Shop, a Young Man to act as SECOND FOREMAN. He will be required to mark out the stuff, and take charge of the shop during the absence of the foreman. This situation offers excellent opportunities for improvement.—Apply by letter only (prepaid), and stating salary required, to A. Z 16, Hamilton-street, Camden-town.

TO BUILDERS' FOREMEN, CLERKS OF WORKS, &c

WANTED, an active, energetic MAN, capable of setting out, superintending, and measuring work, making working plans, and keeping accounts.—Address, with age, references, &c. to Mr. STEPHEN LEWIN, Boston.

TO PARENTS AND GUARDIANS.

WANTED, an OUT-DOOR APPRENTICE to learn the Graining, Writing and Decorative Painting, Marbling on Glass, &c. He will be continually with his master, as he has no other apprentice, which advantage is not often met with.—Address, J. E. 30, Vaughan-terrace, Sheppard's-walk, City-road. At home every evening after Seven o'clock.

WANTED, a respectable YOUTH, in the Office of an Architect and Surveyor. It is requisite he should have some taste for drawing, and write a good hand. No salary will be given.—Address, F. F. F. (post-paid), to the Office of "The Builder."

TO BRICKLAYERS.

WANTED, a steady FOREMAN of BRICKLAYERS, one who fully understands furnace work will be preferred; none but good and experienced workmen need apply. Wages, two guineas per week, and permission to reside in a cottage.—Letters to be addressed, S. R. care of Mr. Field, Printer, 3, Princes-street, Storey's gate, Westminster.

WANTED, by a Young Man, 20 years of age, an ENGAGEMENT in a Builder's Office; has a good knowledge of drawing (geometrical and perspective); competent to assist in taking out quantities, abstracting and making up accounts and measuring; no objection to work occasionally at the bench, at which he is able to make sashes, doors, &c. and is acquainted with the staircase department; can give unexceptional references as to integrity and ability.—Address, A. M. care of Mr. Nickerson, 3, Love-lane, Eastcheap, City.

WANTED, by a respectable married Man, a SITUATION as CLERK in an Office, or YARD CLERK, or to assist in the Counting-house, take orders, &c. in the upholstery trade; he would have no objection to fill up his time in the cutting out and stuffing department, if required, as he is practically acquainted with upholstery.—Address, with terms, to E. S. S. 2, Soho street, Reading, Berks.

TO MASTER PAINTERS AND BUILDERS.

WANTED, a SITUATION as WALKING or WORKING FOREMAN. Can have a good reference as Grainer, Painter, Glazier, or as to the Painting business in general, having filled the same situation for the last fifteen years.—Direct to J. P. 4, Shard's-place, Ball-alley, London wall, City.

TO HOUSE AGENTS AND BUILDERS.

WANTED, by a Young Man, a Permanent SITUATION as PAINTER, GLAZIER, and GRAINER. No objection to a little paper-hanging.—Address A. Z. 39, James-street, Southampton-street, Camberwell.

WANTED, a constant SITUATION, as GRAINER. No objection to turn his hand to plain painting.—Apply J. W. Office of "The Builder."

WANTED, by a STAIRCASE HAND of good experience, a SITUATION. Good reference can be given.—Address, H. P. 46, St. Paul-street, New North-road, Islington.

TO THE PROPRIETORS OF MARBLE AND STONE WORKS.

WANTED, a SITUATION as MANAGER. The advertiser is competent to take the entire management of a business in the above line, having for many years had the direction and superintendence of one of the largest works in the kingdom, and thus gained an amount of experience in every department of the trade which qualifies him to discharge the duties of the situation he advertises for to the satisfaction of those who may need his services.—Please apply, N. M. care of Mr Chambers, Marble rooms, Birmingham.

TO MASTER PAINTERS, &c

THE Advertiser is desirous of an ENGAGEMENT as Grainer, Marbler, Writer, &c.; fully competent to undertake the management of work, having been seven years in his last situation at the West-end. No objection to the country. Address E. W. B. Office of "The Builder."

TO CARPENTERS AND BUILDERS.

THE Parents of a respectable Youth, 17 years of age, are anxious to procure him a MASTER, where he will learn the trade of a carpenter and joiner. Has been at the trade before. West-end preferred.—Address, A. Z. 100, East-street, Manchester-square.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

THE Advertiser having for many years been in the constant habit of putting up Staircases and Handrails of every description, solicits your favours in the compartment, and you may rely on my executing the work in the best manner. Estimates given. Patent veneered handrails.—Address, W. STARR and SON, No 88, Dean-street, Soho, London.

TO LOCAL BOARDS of HEALTH.—A SURVEYOR, practically acquainted with the duties, age 35, requires an APPOINTMENT. Salary from 120l. or according to duties required.—Address by letter, T. O. Office of "The Builder."

TO CABINET-MAKERS, &c IN TOWN OR COUNTRY.

THE Parents of a respectable YOUTH wish to place him as an APPRENTICE to the above Trade. The advantages offered and Premium can be forwarded to B. Shoe-warehouse, 1, Queen's Head-row, Newington, Surrey.

TO NOBLEMEN, GENTLEMEN, and PUBLIC COMPANIES, who are about to build, make alterations, or repair property.

THE Advertiser offers his SERVICES to prepare plans, sections, elevations, and explanatory drawings, specifications, estimates, measure up work, &c.; and generally superintend the buildings to their completion, at a reasonable per centage or fixed salary. Has had a great deal of experience, practically and theoretically, in every description of building, including the most improved arrangements of farm-buildings, workmen's dwellings, drainage, &c.; has a thorough knowledge of the properties and value of materials and labour, the direction and management of workmen, &c. No objection to go to Scotland, Wales, or Ireland. Testimonials will be furnished.—Address A. Z. Mr. Eldershaw's, Newspaper Agent, Brown-stree, Manchester.

TO CEMENT MANUFACTURERS, LIME MERCHANTS, &c.

THE Advertiser, aged 35, of some experience, is in want of a SITUATION. The highest references to his present employers.—Address, A. Z. Office of "The Builder."

PARTNERSHIP.—TO ARCHITECTS and SURVEYORS.—A Gentleman possessing capital and experience, wishes to UNITE with a well-established London Architect.—Particulars to be addressed to A. B care of Messrs. Ricketts and Co. 6, Crosslane, St. Mary-at-hill, City.

TO BRICKLAYERS AND BUILDERS.

PARTNERSHIP.—A Young Man who has a small amount of capital is desirous of entering as JUNIOR PARTNER in a respectable business. Has been accustomed to work, and is a tolerable draughtsman and accountant, and has had the entire management of a business in the country for the last four years. Satisfactory references given and required.—Address, A. Office of "The Builder."

TO PARTIES REQUIRING STEAM-POWER PREMISES.

THE FREEHOLD TO BE SOLD, or TO BE LET on lease, a capital DWELLING-HOUSE, Outoffices and Garden, also a commodious, substantially-built, brick and lofty Factory, fitted with steam engine, boilers, machinery, &c. by Bradshaw & Co. At the rear of the premises is a good stream of water. This property, situated a short distance from town, has easy transit by rail or river, being close to the Bricton Station and the banks of the Thames.—For particulars, apply to WM ATKINS, 1, Mountstreet, Berkeley-square.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's road Dalston, in Plots, which will be pointed out by Mr HARRIS, at the Counting house on the Estate; and in the parish of ISLINGTON, at Grove-road, near the Cock Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house, on the Estate.—Apply for particulars as above, or to D. HUGHES, Solicitor, 13, Gresham-street, Gu ldhall

BUILDERS and Others.—TO BE LET, FREEHOLD BUILDING LAND at Chertsey, Harrow, Merton, Mitcham, Norwood, Peckham, Stratford, and Wimbledon.—Apply to Messrs. BLAKE and SNOW, Solicitors, 22, College-hill, Cannon-street, Lond n

BUILDING SITES for Gentlemen's Villas, most delightfully situate on Surbiton-hill, within a quarter of a mile of the Kingston station, South-Western Railway. Price 5s per foot frontage. Lease 99 years.—Apply to Mr. POWELL, House Agent, New Malden, near Epsom, Surbiton hill, Kingston, Surrey. Beautiful villa residences just completed to be let or sold

TO BE SOLD, at FINCHLEY, Middlesex, nearly FIVE ACRES of FREEHOLD LAND, with a frontage to the first Brick-lane road at its junction with the Finchley-road, six and a half miles from the Regent's-park. The land is admirably suited for building purposes, and part of the purchase-money may remain on mortgage, if required. Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery lane

ST. MARGARET'S, near RICHMOND.—A FEW most eligible SITES for VILLAS, with a frontage to the Thames. To BE LET on building lease, or may be advanced to respectable builders. Apply to GEORGE MORGAN, Esq. 5, Chancery lane.

DOWNSHIRE-SQUARE, READING.—TO BE LET, on the top of the Castle Hill, the most elevated point of the town of Reading, upon building leases, FIVE PACKAGES FOR HERITAGE, for detached or semi-detached villas, and for third rate houses. Money advanced to re-pectable leparties.—Apply to ROBERT CLARKE, Esq. Solicitor, Reading; or, GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

BRENTWOOD, Essex, within 200 yards of the Railway Station.—To BUILDERS, SMALL CAPITALISTS, and Others.—TO BE SOLD, or LET, on lease, a few hundred feet of FREEHOLD BUILDING GROUND abutting fifty-five feet on the road, and 500 running back, eligibly situate for the erection of small property, which is in great demand. Also for a factory.—Apply to W. K. PRESTON, Esq. Billiter-square, London; or Mr. JOB HALL, Queen's Arms, Newgate street, London; or G. BUCKLER, Esq. Hill-house, Shenfield, Essex.

BUILDING PLOTS of FREEHOLD LAND.—Important to Builders and small Capitalists who wish to purchase a few lots of really superior building ground in a neighbourhood where great value of house accommodation for clerks and artisans never had a parallel, are invited to view the property opposite the above Arms Inn, Plaistow, corner of Balaam-street, a few minutes' walk from the Barking-road Station North Woolwich line. Unlike the mud hitherto sold near Victoria Docks, which would require a shaft to a distance, and the large manufactories, this property is on a high and dry gravelly soil, and bounded by main roads, to which there is a frontage of 300 feet. Any one wishing to realise the just value of property, knowing that nothing can be really equal to it has ever before been in the market, will please to take place at the Abbey Arms Inn, on THURSDAY or FRIDAY Next.—Particulars and plans of J. T. FISHER, Esq. Auctioneer, Plaistow opposite the estate; C. R. RANDALL, Esq. 14, Tokenhouse-yard, City; and at the various Inns in the neighbourhood.

HULLAH'S-HALL, LONG-ACRE.—TO BE LET, a rectangular PLOT of BUILDING LAND in this locality, with 60 ft. frontage.—Apply to Mr. BARLOW, 11, Portman-street, Portman-square.

RICHMOND HILL, SURREY.—LAND TO BE LET on good Building Leases. The ground Land rises with a fine view over parks and long reaches.—For plans and particulars apply to Mr. BLENKARN, Architect, 3, Sise-lane, City; and Richmond-green, Surrey.

SOUTHGATE, MIDDLESEX.—About HALF AN ACRE of valuable FREEHOLD BUILDING LAND To BE SOLD, fronting the main road from Southgate to Edmonton, Ample Water Supply, Gas, Brick-field, Borough; or F. LOWE, Southgate, Southgate.

FREEHOLD COTTAGE and GARDEN, Crouch-hill.—TO BE SOLD, by Private Treaty a FREEHOLD COTTAGE and GARDEN, delightfully situated at Mount Pleasant, Crouch-hill, at a frontage between the Hornsey Arms and Horse and Groom Inns. The mansion and grounds of the Hon. and Rev. B. Noel. The cottage is capable of great improvement, or the site might be occupied by a villa residence, being surrounded by trees and shrubs of many years growth. For price and further particulars may be had on application to Messrs. CARTER and ELLIS, Builders, Hornsey-road, Tollington-park.

BRIGHTON: MARINE-PARADE.—TO BE SOLD or LET on BUILDING LEASES, the only vacant PLOT of GROUND on the Marine-parade, having a frontage of 150 feet facing the sea, with a depth of 220 feet; with an excellent frontage to the Bristol road. The house and stabling standing on part of the land to be sold and pulled down, and the materials to be cleared away immediately.—For particulars apply personally or by letter post-paid, to A. B. 21, Marine square, Brighton.

REPAIRING LEASE.—TO BE LET on a REPAIRING LEASE for thirty years, No. 9, FEATHERSTONE-BUILDINGS, Holborn.—For particulars apply to Mr. LAVENDER, Surveyor to Bedford Charity Estates, Radnorchambers 73, Chancery-lane

---

HEREFORDSHIRE.—TO BE LET, on lease or otherwise, and either together or separately, extensive STONE QUARRIES, situate in a favourable situation for working, within 14 miles of a station on the Shrewsbury and Hereford Railway, yielding an inexhaustible supply of paving, wall, and block stone of the finest quality and of almost any dimensions.

Also, an extensive BRICK, TILE, and PIPE MANUFACTORY, nearly adjoining the above, now in full work, and commanding a great extent of the finest clay suitable for the best quality of goods manufactured, and which are allowed to be equal to the Broseley.

Also, a LIME-KILN and extensive LIME ROCK, having a constant demand in the neighbourhood.

The above have hitherto been in the hands of the proprietor of the estate.—Apply to Messrs. PARKER and GOLDINGHAM, Solicitors, Worcester.

TO BUILDERS, CARPENTERS, UNDERTAKERS, AND OTHERS

MR. STRANSOM is instructed TO LET, in consequence of the death of one of the partners, a very excellent concern, embracing the hands of an undertaking business, with extensive premises, established more than half a century, situate in the centre of the capital market-town of Uxbridge, near to a railway station. The stock to be taken at a valuation, which will be reduced to meet the views of the parties desirous of taking.—For further particulars apply to Mr. STRANSOM, Auctioneer and Valuer Uxbridge, Mid llesex

---

TO INDIA-RUBBER MANUFACTURERS, WATERPROOFERS, AND OTHERS.

A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet, TO BE SOLD, with the connection thereto belonging in consequence of the parties retiring from the business, five stories high, with steam-engine and shafting forge and all the machinery requisite for preparing, masticating, and cutting india-rubber in sheets, thread, &c. the whole now in full working order. Term, forty-two years; ground rent, 25l per annum.—Apply for further particulars at Mr. LAHEE's (only) Offices, 67, New Bond street, London.

LANDING WHARF and DRAWING DOCK, LETTS WHARF, near Waterloo bridge, Surrey side. Every accommodation is offered at this extensive wharf for landing, shipping, drawing, and warehousing goods. English and foreign timber iron, stone, bricks, sand, coals &c. 150 feet river frontage, 6 feet dock frontage, and 3 acres a thirty feet for heavy goods, boilers, &c.; also a ten-ton crane.—Apply to ROUTLEDGE and SON, on the Wharf

---

Best, at the great Organ (built by Messrs. Gray and Davison), erected at the Exhibition of 1851,

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from xidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so at thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron essels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stucceed buildings it will be found to be effectual in pre-enting the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.

The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta. At Alexandra Court. The Pompeian roof is of Terra-cotta and cement combined. Since the execution of these works, Mr. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification obtained.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced in price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK.—LONDON.—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurcous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxide becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BUNDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents, in London, Messrs. CHARLES DUVAUX and CO. wholesale agents, 62, King William-street, City; JACK and BRADY, wholesale and retail agents, 8, Tottenham-court, New-road, and 30, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, is purple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 superficial feet. Sold in casks of 1, 2, and 4 cwt. at 8s. 1½s and 2½s each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 16s 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gall. in ordinary colours. Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, bar es, park palings, &c. 2s. per gall.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finishing in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innoxious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, whole sale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is now the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well-known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality, and a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the best cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monop ly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and Co have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr ASPDIN), much improved the quality of this Cement with out any increase in price.

Engineers and architects are recommended to specify "Aspdin Patent," as there are numerous imitations sold as Portland Cement resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London, at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTH FLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their Works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

TO BOARDS OF HEALTH, COMMISSIONERS OF SEWERS, ENGINEERS, ARCHITECTS, DISTRICT AND ROAD SURVEYORS.

W. AUSTIN'S PATENTED SEWER and TUNNEL BLOCKS, BRICKS, DRAIN PIPES, IRON TRAP GRATINGS, &c await inspection, at Aspdin and Ord's Wharf, Abingdon-street, Westminster. Trials are requested to prove the merits of the various articles.—Communications address W. AUSTIN, 27, Holywell-street, Westminster

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JAMES BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Steel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that is to say, is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, Lime Burners, and Fire-bricks. Grindstones, Cement Chimney-tops, ditto Vases, Ridging, Sand Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME. The natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

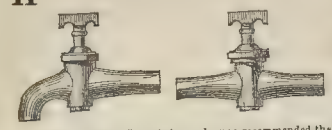
GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell there left for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Globe, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SEYSSELS, FAVIERS, STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.



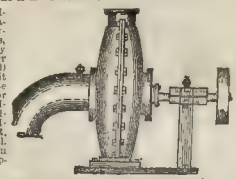
GROUND ABERTHAW LIME (for Hydraulic Works), Blue Lias Cement, Cambrian Plaster, Caustic Flour of Lime (for Agricultural and Gardening purposes), and Portland Cement, shipped at Cardiff, in barrels, to all parts of the world, or forwarded by railway direct out of the works, in sacks or barrels, to any part of the kingdom.—JAMES BIRD and CO. Cambrian Cement Works, Cardiff.

ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply the trade generally with their Colours, whose purity and lowness of price are unequalled. Samples of the Colours may be seen at the Offices of the Company, No. 11, Pall-mall. Address, W. PROSSER, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by HANSOME'S FILTERING SYSTEM. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 5o, 10o, 15o, and 20o gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. Reference to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, 30s. 6d. each, or wire

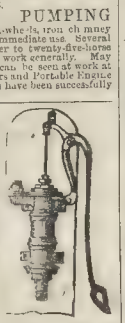
LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers to the Crescent, Jewin-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold) to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.



TO CONTRACTORS.

PATENT PORTABLE PUMPING

ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to Contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWAY and HALLS, Engineers and Portable Engine Makers, &c. Blackfriars-road. These engines have been successfully employed for years.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard the cumbrous carriage and expensive slings and guides are unnecessary, reducing the price considerably less than pumps made on the old plan.

Hot and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescopic suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to be cut off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3 inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
White Friars-street, Fleet-street, London.

JAMES MICHIE, Engineer, Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Cranks, &c.

N.B. Several High-Pressure Engines for Sale.

STEAM BOILERS of every description, Wrought-iron Girder Bridges, Gas holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Tividale near Dudley. London Office, 75, Hatton-garden.

ENCAUSTIC TILE PAVEMENTS. MAW and CO. BENTHALL WORKS, BROSELEY, Salop, manufacturers of the Closter Pavement of Medieval Court, and

THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM,

in the beautiful ENCAUSTIC TILE PAVEMENT of CLOISTERS of BYZANTINE COURT, Crystal Palace. M. D. Wyatt, Esq., in Official Hand Book, forward without charge, designs and estimates adapted to any given dimensions of Entrance-halls, Conservatories, Verandahs, &c. in every style.

Specimens at 11, Aldersgate-street, London.

BRICKS.—From Kent Fields.—Grey Stocks, Shipping Parlors, &c.; also White Suffolk and Red Facing Bricks.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Parlors, and Pickings, of good and sound quality, constantly on sale at the KILNS, Brockley-rise, are only a pleasant walk from the City. H. D. earnestly requests Parties going to inspect him with a visit, in order to inspect his stock, and to judge for themselves.

Stock Bricks, Malm washed Stocks, and Place Bricks also on sale.

Specimens are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for ex. ornamental facings.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Old-town, Hoxton-rise, near the Rosemary Branch, Hoxton.

Malm Lime and Pit Sand of approved quality, constantly on sale at reasonable terms. This sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and FIXING of LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders, and others to the plan they adopt, which has met the approval of some of the most eminent scientific men

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

BRICKS!

BEART'S PATENT BRICK COMPANY,

GOODS STATION YARD, GREAT NORTHERN RAILWAY, KING'S-CROSS.

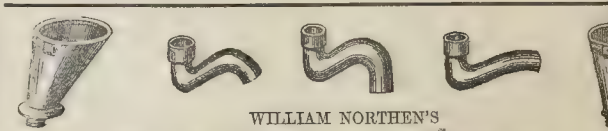
LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machine Trestles, Steps, &c. he has always on hand, at a very low scale of charges.



Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c. &c., FIRE BRICKS, Turned Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c.—Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

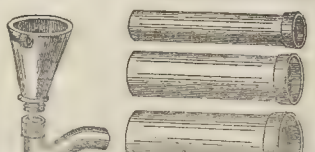
PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS: manufactured upon an improved principle, insuring with ease cranks, lead trap, &c. Any number of Closets can be supplied from one main. Also PATTEN'S Improved Power FLUSHING LOW-PRESSURE WATER-CLOSETS (approved by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals). Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete, 35s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 4, Old Fish-street, near St. Paul's, London.

A. ALLEN, 24 Wharf, Harrow-road, Paddington, Manufacturer of Glazed Stone Ware Drain Pipes, Syphons, Bends, Junctions, Closet Pans, &c. Manufactory, Warwick, near Bristol. All applications to be made to A. ALLEN, 24 Wharf, Paddington.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.



W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PAN, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

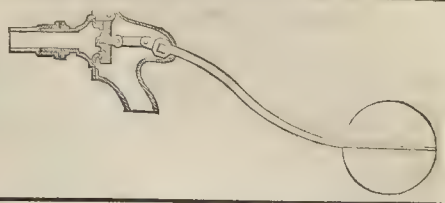
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability are universally admitted; while the rapidly increasing demand for them proves the estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assortment of Stock of Drain Tubes, of every form and size, adapted to the various situations in which they may be required; and also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and of superior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin, Old-street-road, Bermondsey, Danvers Wharf, foot of Battersea-bridge, Chelsea, Pratt Wharf, King's-road, Camden-town; T. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Brydges-street, Covent Garden; and at EDWARD COCKS, 81, Warwick-street, Oxford-street.

Drawings and List of Prices will be forwarded free on application.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of closing against the column of water when most required, and are warranted to stand any known pressure of water.

	½ inch.	¾ inch.	1 inch.	1¼ inch.	1½ inch.	2 inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 6d.	7s. 3d.	8s. 3d.	12s. 6d. each.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 3d.	14s. 6d. each.	

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

J. TYLOR AND SONS, WARWICK-LANE, NEWGATE-STREET, LONDON.

TO ARCHITECTS, ENGINEERS, AND BUILDERS.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

...phon Pan, with or without STEPHEN ...N GREEN'S Patent Air-tight Valve.

...tered Flushing Basin,—the most effective ...syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1849.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

VICTORIA POTTERY, LEIGH,

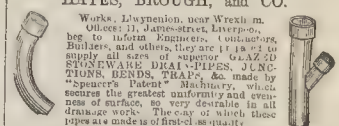
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers, Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at 57, Strand House, Blackwall. Orders executed from the above place, from Falcon-wharf, 80, Bankside, Surrey, and from Harrow-bridge-wharf, Stratford, Essex.

REDUCTION of PRICE in UNGLAZED DRAIN PIPES.

Manufactured by CHAS. FRANCIS and SONS, NINE ELMS.



The price in future will be

0s. 2½d.	per foot for the	3	inch bore.
0s. 3d.	"	4	"
0s. 5d.	"	6	"
0s. 8d.	"	9	"
1s. 3d.	"	12	"
2s. 3d.	"	15	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The porosity against red ware is overcome by this manufacture. As it is well known that good earthenware, UNGLAZED, is the oil at material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

Agent for Southampton, R. L. FLUDER, American Wharf.

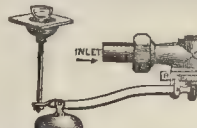
HAYES, BROUGH, and CO.

Works, Llwynenion, near Wrexham.
Offices: 11, James-street, Liverpool.

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The easy of which these pipes are made is of first-class quality.

J. TURNER, Pottery, 2, South Wharf,

Praed-street, Paddington.



Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

MILL WALL POTTERY (near Scott

Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London. Parties are forwarded on application.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE WORKS.—Sealed Tenders, for CONSTRUCTING a BASIN and an EMBANKMENT at BULL POINT, near Devonport, will be received at the Ordnance Office, Pall-mall, London, on or before the 17th day of AUGUST, 1854, at NOON, addressed "To the Secretary of the Board of Ordnance," and endorsed "Tender for Works at Bull Point." Detailed Plans may be seen, and specifications, Form of Tender, and all other necessary information obtained, at the Royal Engineer Office, Bull Point, between the hours of NINE and FOUR, daily, from the 24th of JULY to the 15th of AUGUST next, Sundays excepted.
Royal Engineer Office, Devonport, 20th July, 1854.

NEW CONGREGATIONAL CHAPEL, STOKE-UPON-TRENT.—To BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of the above named BUILDING may inspect the plans and specification, and obtain all other information, at the Offices of the Architects, between the hours of TEN and FOUR, from MONDAY, the 24th inst. to SATURDAY, the 29th inst. and at the Rev. W. G. HILLMAN'S, from the 1st inst to the 5th of AUGUST next. Tenders sealed and endorsed, to be sent to the Rev. W. G. HILLMAN, 18, Hill-street, Stoke upon Trent, by NOON of MONDAY, AUGUST 7th. The Committee do not bind themselves to accept the lowest Tender.
BIDLAKE and LOVATT, Architects.
Market place, Wolverhampton

BUTE DOCKS, CARDIFF.—To EXCAVATORS and CONTRACTORS for PUBLIC WORKS.—Notice is hereby given, that the Trustees of the Marquis of Bute are prepared to receive TENDERS for the EXCAVATION of a NEW TIDAL DOCK, and the formation of a BREAKWATER to protect the same on the east side of the entrance of the present docks. The plans, specification, and quantities may be seen on application at the Office of JOHN LEWIS, Esq. C.E. at the Bute Docks, Cardiff. Sealed Tenders, addressed to the Trustees of the Marquis of Bute, and endorsed "Tender for Tidal Dock and Breakwater," must be delivered at the Dock Office on or before WEDNESDAY, the 9th day of AUGUST. The Trustees do not bind themselves to accept the lowest Tender

LEOMINSTER TOWN-HALL and MARKETS.—To BUILDERS.—Persons desirous of delivering TENDERS for the ERECTION of the LEOMINSTER TOWN HALL and MARKETS, may examine the drawings and specifications at the Offices of Mr. THOMAS SALE, Town Clerk, Leominster; and Mr. JAMES CRANSTON, Architect, 2, Bennett's-hill, Birmingham. Sealed Tenders must be delivered to the Town Clerk on or before the 5th day of AUGUST next, addressed to the "Leominster Markets and Fairs Committee." The lowest Tender will not necessarily be accepted.
Leominster, July 17, 1854. THOMAS SALE, Town-clerk.

LEOMINSTER MARKETS.—To ENGINEERS, &c.—Persons desirous of delivering TENDERS for the IRON ROOFING and Other IRONWORK in the LEOMINSTER MARKET, may examine the drawings and specifications at the Offices of Mr. THOMAS SALE, Town Clerk, Leominster, and Mr. JAMES CRANSTON, Architect, 2, Bennett's-hill, Birmingham. Sealed Tenders must be delivered to the Town Clerk, on or before the 5th day of AUGUST next, addressed to the "Leominster Markets and Fairs Committee." The lowest Tender will not necessarily be accepted.
Leominster, July 17, 1854 THOMAS SALE, Town Clerk.

ROTHERHAM WATER-WORKS.—The Rotherham and Kimberworth Local Board of Health are prepared to receive TENDERS from competent persons for the execution of the several works comprised in Contract No. 1, namely, the ERECTION of an ENGINE and BOILER-HOUSE, Engineman's Cottage, and a Boundary Fence. Duplicate copies of the drawings and specification may be seen, and forms of tender with quantities may be obtained at my office, and at the Offices of the Engineers, Messrs. LEE and STEVENSON, 7, Duke-street, Westminster, on or after MONDAY, the 31st inst. and sealed Tenders must be sent to me on or before TUESDAY, the 8th day of AUGUST next ensuing.
By order of the Board, J. BARRAS, Clerk.
Rotherham, July 18, 1854.

TO BUILDERS AND CONTRACTORS.

PERSONS desirous of TENDERING for the ERECTION of SCHOOLS, to contain 400 Boys and Girls, together with a Reading and Lecture Room; also several Houses, with Outbuildings and Works, for RICHARD BAILEY, Esq.; may obtain further particulars on application to Mr. WATSON, at the Office of the Staveley Works, after MONDAY, 31st instant. Sealed Tenders to be delivered or be forwarded on or before SATURDAY, the 12th August next. Mr. BARROW does not pledge himself to accept the lowest or any Tender.
Staveley Works, near Chesterfield, 19th July, 1854

MODEL DWELLINGS, DUDLEY.—The Dudley District Committee of the Metropolitan Association for Improving the Dwellings of the Industrious Classes, are desirous of receiving TENDERS for the FIRST BLOCK of their PROPOSED DWELLINGS in the DOCK-LANE, Dudley. Plans and specifications may be seen, together with a copy of the contract, at the Head-Office, 19, Coleman-street, City, London, and at the Offices of Mr. W. WIGGINTON, Castle-street, Dudley, the Architect of the British Association, on and after MONDAY, the 31st instant. Tenders to be forwarded to the Committee, under cover, to the Secretary, not later than the 11th of AUGUST. The Committee do not pledge themselves to accept the lowest or any Tender.—By order of the Local Committee.
Dudley, July 25, 1854. W. BARNS, Local Secretary

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of a VILLA RESIDENCE, at Sydenham, Kent, may inspect the plans and specification at the Offices of Mr. R. J. WOODCOCK, Architect and Surveyor, Adelaide Chambers, Gracechurch-street. Sealed Tenders to be delivered on or before the 8th day of AUGUST next. The proprietor reserves to himself the right of refusing the lowest or any other Tender.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY the 8th day of AUGUST, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING a certain intended BRICK SEWER, 12,600 feet in length, or thereabouts, of the respective sizes of 9 feet 6 inches by 9 feet, and 8 feet 6 inches by 8 feet in the clear, with other works in connection therewith, to commence at a point near Cremorne-gardens, Chelsea, and thence proceed to King's-road, Richmond-road, Wards-road, and the Uxbridge-road, in the respective parishes of Saint Luke, Chelsea, and Saint Mary Abbotts, Kensington, in the county of Middlesex, and for the maintenance of such works in complete repair for the calendar months. Plans, sections, and specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 7th day of AUGUST. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.
E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 24th day of July, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 8th day of AUGUST, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 5,815 feet in length or thereabouts, with other works in connection therewith, in the streets, Mews, and other lines, Kingsroad, Park-road, Downshire-street, Whitehall, and other streets and places in West Ham, in the County of Middlesex, and for the maintenance of such works in complete repair for twelve calendar months.—Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 7th day of AUGUST. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.
E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 24th day of July, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 8th day of AUGUST, 1854, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING the following Works, namely, about 1,400 feet in length, of Brick and Pipe Sewers, with the Works in connection therewith, in Upper Stamford-street, Walnut-tree-walk, Saunders-street, Devonshire-street, and other Streets and Places in the several parishes of Saint Mary, Lambeth, and Christ Church, in the county of Surrey (in one Tender); 2,200 feet in length, or thereabout, of Brick and Pipe Sewers, with other Works in connection therewith, in Green-man-lane, Great Gardiner-street, Wilmington-street, Coin-street, Leonard-street, Accommodation-street, and other streets and Places in the several parishes of Saint Mary, Newington, Saint George the Martyr, Christchurch, and Saint Saviour, Southwark, in the said county aforesaid (in one Tender); 1,350 feet in length, or thereabouts, of Brick and Pipe Sewers, with other Works in connection therewith, in Bermondsey Lower-road, Grange-road, Nicklinger-road, Thomas-street, and other Streets and Places in the several parishes of Saint Mary, Bermondsey, Saint Thomas and Saint Olave's, Southwark, and Saint John, Horsleydown, in the county aforesaid (in one Tender); and for the maintenance of such Works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 7th day of AUGUST. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.
E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 20th day of July, 1854.

TO BUILDERS

TENDERS are required for the ERECTION of SHOPS. The plans and drawings, prepared by Messrs. WILSON and FULLER, Architects, Bath, will be for inspection at the Vestry of the West or Church, Sea North Road, Hampton, on or from ADELAIDE to be delivered on or before SIX and NINE a.m. when sealed quantities will be supplied on the usual terms. The Trustees do not pledge themselves to accept the lowest tender.

TO CARPENTERS, FENCE-MAKERS, AND OTHERS.

PERSONS desirous of TENDERING for the ENCLOSING of about THIRTY ACRES of LAND, with OAK PALE FENCING, at Ashwood, may see or obtain by post on application to Mr. Carter, the Park Keeper at the Office of Messrs. W. G. and E. HARRISON, 59, Lincoln's-inn-fields, London. The lowest Tender will not necessarily be accepted, and immediate application should be made by letter or otherwise.

[For remainder of Contracts see next page.

CONTRACTS.

LONDON and NORTH-WESTERN RAILWAY.—CONTRACTORS.—The Directors of the London and North-Western Railway Company are desirous of receiving TENDERS for WIDENING the RAILWAY between Primrose-hill and Kensall-green tunnels. Parties desirous of tendering may see the drawings and obtain assistance as to the quantities at the Engineer's office, on TUESDAY, AUGUST 1, between the hours of TEN and FOUR o'clock. Sealed Tenders, addressed to the Secretary, at this office, to be sent in on or before WEDNESDAY, AUGUST 30, at TEN o'clock, a.m. By order,
CHARLES E. STEWART, Sec.
Secretary's office, Euston Station, London, July 27, 1854.

TO CONTRACTORS, BUILDERS, &c.

PARTIES are invited to submit TENDERS for ERECTING and FINISHING a MANSION HOUSE at LOPPICES, one mile from Rhayader, in Radnorshire, and for which the foundations are laid and a small portion of the walling built. The plans and specification can be seen on application at Builders' Arms, Rhayader, and at the Offices of Mr. THOMAS NICHOLSON, Architect, Hereford, of whom all particulars can be obtained. The Tenders are required on or before the 24th of AUGUST next, and no pledge is given that the lowest one will be accepted.

FIRE—ROBBERY—VIOLENCE—PILLAGE—MILNER'S HOLDFAST and FIRE-RESISTING SAFES, the strongest safeguards in the world against.
EXTENSIVE FIRE IN GLASGOW.
MESSRS. DAVID HOUSTON and CO.
Gentlemen, At the serious fire in Union-street yesterday, by which my counting-house was destroyed, I owed the preservation of my books to the MILNER'S SAFE to which they were kept. The contents of a wall safe were totally destroyed at the same time. You will please send me immediately another "Milner" of the same size as the one I had, being thoroughly satisfied of their safety, after the test I have just seen.
I am, Gentlemen, your obedient servant,
(Signed) JOHN DODDS.
27, Union-street, Glasgow, Feb. 22, 1854.
MILNER'S PHŒNIX SAFE WORKS, Liverpool; London Depôt, 17a, Moorgate-street, City

53, 54, & 55, WYCH-STREET, and 91, DRURY-LANE.
Specimens also at the Crystal Palace—Hardware Department.

THE SMOKE PREVENTION COMPANY, 38, CHARING-CROSS. PRIDEAUX'S SELF-CLOSING VALVES applicable to every description of furnace.—Extensive experience has shown the action of these valves to be so perfect as to leave nothing to be desired. Not only do they entirely prevent smoke, but they do so with benefit to the action of the furnace in every point of view, boiling coppers, heated ovens, or getting up steam quicker, and saving from 10 to 15 per cent. of fuel. In no instance have the Company ever received a complaint of having impaired the action of a furnace.
N.B. One year's saving of fuel accepted, in lieu of any payment for royalty.

THE SMOKE PREVENTION COMPANY, 38, CHARING-CROSS. PRIDEAUX'S SELF-CLOSING VALVES applicable to every description of furnace. Parties who are dissatisfied with the imperfect prevention of smoke, waste of fuel, diminution of steam, or delay in any heating process caused by such useless schemes, may obtain references at the Offices of the Company, where will easily learn to satisfy themselves of the peculiar character and great value of this invention.
N.B. The Valve has proved itself as admirably adapted for brewers' coppers and bakers' ovens, as for steam-boilers. A month's trial allowed.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (gas works erected complete). And manufacturers of Corrugated and all kinds of Iron Roofing for Hay way Stations, Sheds, Warehouses, &c. &c. executed in the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Gross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durabi Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs	about 18	oz.	per foot super.
No. 13	"	"	20 oz.	do. do.
No. 13	"	"	23 oz.	do. do.
No. 14	"	"	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 18s. 6d.

Best fine Cut Clasp and Rose { 1½ 1s. 6d. 1¾ 1s. 9d. 2 2s. 3d. 2½ 3s. 6d. 3 4s. 6d. 3½ 6s. 6d. 4 8s. 6d. 4½ 11s. 6d. 5 17s. 6d. 6 26s. 6d. } per cwt.

Sash Weights. Air Bricks, 3s. per doz. Hooping for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross. Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 3½d. per inch. Register Stoves from 5d. per inch.

Improved Self-acting Ranges with oven and boiler { 28 29s. 32 30s. 36 32s. 40 inch. } Best Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 55s. 28 58s. 40 60s. each. }

An extensive stock of bright and black Register Stoves in every variety of design at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Letters, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

TO CONTRACTORS AND BUILDERS.
BENNETT'S LOCOMOTIVE and SELF-ADJUSTING CHIMNEY-SWEEPING for SEWERS and CULVERTS is recommended as an immense saving of labour, materials, and all sorts of time incidental to striking, moving, and resetting. It consists of such a sweeping cart as to insure an equal pressure on all parts thereby dispensing with the risk of stopping or throwing down the work; five minutes only being required for striking, moving, and resetting a length of 20 feet, which length is sufficient for any one turn of sweeping. Further particulars can be obtained of JOSEPH JEFFREY BENNETT, Dover, Kent; or of Mr. THOMAS HOLDSWORTH, 16, Shaftesbury-crescent, Vauxhall-bridge-road, Pimlico.—Licences granted.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentee, POWIS, JAMES and CO. 26 Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-acting, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO having received the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.
The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fixed by R. S. Newall and Co after the model of the fences of this material in the Slopes and Home park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.
N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.
OFFICES.—Gateshead-on-Tyne.
130, Strand, London.
6, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

THE SMOKE-CONSUMING STOVE
invented by Dr. ARNOTT, and explained by him at the Society of Arts on Wednesday, MAY the 10th insures perfect combustion, economises fuel, improves ventilation, and requires much less attention than the register stoves in general use, was manufactured by D and E BAILEY, 271 and 272, Holborn, who are prepared to supply new, or adapt old stoves to the principle

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co's establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and Co (opposite to the Monument), London bridge. Established A.D. 1700.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron Surgery, Brass Foundry, Nails, wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c 6s. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-staples and Striking Plates, Fire-proof Safes, Deed and Cash-boxes, Copying and Lever Presses. Descriptions and lists of prices may be had at the Depot, 32, Strand, gratis.
STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

TO ARCHITECTS AND BUILDERS.
CHUBB'S WROUGHT-IRON and FIRE-PROOF DOORS and FRAMES, for strong Rooms. A large stock of the above of all sizes, made in the best manner, and of different strengths, fitted with CHUBB'S PATENT DETECTOR LOCKS, throwing from two to nine bolts, constantly on sale, at very moderate prices. FIRE-PROOF SAFES of every size, and Patent Detector Locks and Latches for all purposes.—C. CHUBB and SON, sole Manufacturers, 57, St. Paul's Churchyard, London.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in Wood or Iron, respectfully call the attention of the nobility, gentry, and clergymen to their simple but effective mode of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 20,000 cubic feet room warmed by hot air only, at 60 degrees Fahrenheit, in hurricane 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOLLEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOLLEVE, French Engineer, 55, King William-street, City.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas-Boilers from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all occasions, from 1l. DEFRIES'S celebrated DRY GAS METERS upwards of 50,000 in use.—See testimonies at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Rogers, delivered at a meeting of the Architectural Society, wherein Mr. Hood shows that of heating by hot water is truly the only effective system applicable to warmbuildings. It is free from all objections, is economical in its working, and gives perfect ventilation with a uniform comfort throughout the whole of the rooms in each of the buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description.—JAMES BARTON, Iron Founder, South, &c. 37a, Oxford street, a few doors east of the Pantheon.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.
HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Lukes, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of W. C. and C. Registered Model Water-closet. The water-closet is the most simple and efficient ever introduced for high services and for Laying without the usual Separate Cistern Work, & From its construction all possibility of external leakage is prevented. A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, and obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented Fern article, or Stable Furniture enamel. COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

BRUCE'S PATENT ECONOMIC STABLE FITTINGS; sole Manufacturers RANSOME and SIMS, Ipswich. Tube Iron and Cast-Metal Sciolum Pans, Hay-racks and full particulars, post-free. These are the best fittings yet brought out.

CHEAP PEWTERING, GAS-FITTING, and BELL HANGING.—Improved Moulded Counter-engines, 6ds per pull; Private Residences fitted with Gas, Four Lights complete, 60s; Bells hung in Secret, with best Foreign Leaders, 8s per pull. BARRATT, Pewterer, Bell-hanging Manufacturer, and Gas Fitter, 12, Spa Road, Bermondsey.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Hearthstones, Ledgers, Sills, Landings, &c. cut on the shortest notice. Country orders promptly attended to

Morgan Hallah, from Lady day, 1855; the Wharf known as Sharpe's wharf, on the south side of the High-street, Wapping, together with several extensive stacks of warehouses or granaries in Newmarket-street, Wapping; the Messuage or Tenement, occupied by Mr. Major Usborne, from Michaelmas, 1854; and a small House and Shop, now unoccupied, on the west side of Old Gravel-lane, Wapping, numbered 27, from Michaelmas, 1854. Tenders sealed and endorsed "Tender for Premises at Wapping," must be delivered at the Clerk's Office, Bridewell Hospital, before TWELVE o'clock on the 29th of AUGUST next, at which parties offering are to be in attendance. The Committee do not pledge themselves to accept the highest or any Tenders. Printed particulars, with the form of Tender may be had at the Clerk's Office any day between the hours of TEN and FOUR o'clock. B. WELTON, Clerk.
Dated July 26, 1854.

TO BE LET, extensive and convenient PREMISES, near the railway station, Lewisham, suitable for builders or others. They comprise stabling for eight horses, pig-houses, cart-sheds, large joiner's shop, drying shed, plasterer's shop, and every requisite convenience. Terms moderate.—Apply to X. Z. care of G. L. Beetholme, Esq. 3, Great James-street, Bedford-row

REPAIRING and BUILDING LEASES, SHOOTER'S-HILL.—TO BE LET, a DETACHED PAIR of RESIDENCES, with good gardens. Also, several very eligible Building Sites, from half an acre upwards. The situation is perfectly healthy, and commands very extensive and picturesque views.—Apply to Mr. JOHN COLLIER, Surveyor, 7, Clement's-lane, City.

TO BUILDERS, CARPENTERS, UNDERTAKERS, AND OTHERS.

MR. STRANSOM is instructed TO LET, in consequence of the death of one of the partners, a very excellent concern, embracing the building and undertaking business, with extensive premises, established more than half a century, situate in the centre of the capital market-town of Uxbridge, near to a railway station. The stock to be taken at a valuation, which will be regulated to meet the views of the parties desirous of taking.—For further particulars apply to Mr. STRANSOM, Auctioneer and Valuer, Uxbridge, Middlesex.

TO BE SOLD, at FINCHLEY, Middlesex, nearly FIVE ACRES of FREEHOLD LAND with a frontage of the Great North road at its junction with the Finchley-road, six and a half miles from the Regent's-park. This land is surrounded by building. Part of the purchase-money may remain on mortgage, if required. Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery lane.

ST. MARGARET'S, near RICHMOND.—A FEW most eligible SITES for VILLAS, with a frontage to the Thames TO BE LET on building lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. 5, Chancery-lane

DOWNSHIRE-SQUARE, READING.—TO BE LET, on the top of the Castle Hill, the most elevated part of the town, FREEHOLD BUILDING LAND, FRONTAGES FOR A TERRACE, for detached or semi-detached villas, and for third rate houses. May be viewed to-morrow and Tuesday. Apply to RUPERT CLARKE, Esq. Solicitor, Reading; or, GEORGE MORTAN, Esq. Architect, 5, Chancery-lane.

BUILDING LAND TO BE LET.—An Eligible PLOT of GROUND situate on PECKHAM RYE-HILL, facing the Common. Frontage 56 feet 9 by deep. Long lease.—Apply to J. S. 16, Warwick-place, Peckham-rye.

TO CARPENTERS, BUILDERS &c

SPACIOUS BUSINESS PREMISES on LEASE, for Mahogany Brewery, Planing, Sawing, Dining, Parlour, Factory, &c., having rooms both, making floors for kiln, deep well, and good drainage, dry cellars, with entrances for horses and carts, abutting on Homerton-street and the New-road West. Apply to view at 1, Homerton-place, New-road, between TEN and FOUR, p.m.

GROUND TO LET, for Building, in the parish of SHOREDITCH, at the rear of Messrs. Bellingham's Distillery, Queen's road Dalston, in Plots, which will be pointed out by Mr. HARRIS, at the Counting-house on the Estate; and in the parish of ISLINGTON, at Grove-road, near the Cock, Upper Holloway, in Plots, which will be pointed out by Mr. GREEN, at the Counting-house, on the Estate.—Apply for particulars as above, or to D. HUGHES, Solicitor, 12, Gresham-street, Guildhall.

BUILDING SITES for Gentlemen's Villas, most delightfully situate on Surbiton-hill, within a quarter of a mile of the Kingston Station, South-Western Railway. Price 8s. per foot frontage. Lease 99 years.—Apply to Mr. POWELL, House Agent, near the church, Surbiton-hill, Kingston, Surrey. Beautiful villa residences just completed to be let or sold.

TO BUILDERS

TO BE LET by CONTRACT, the LABOUR in BUILDING several HOUSES. None but responsible parties will be dealt with. The contractors will be required to take a few plots of building ground on advantageous terms. —Apply to Mr. SPUN, 3, Newton-road, Bayswater.

TO BUILDERS AND OTHERS

TO BE LET, FREEHOLD BUILDING LAND, fronting the Edgeware-road, in a situation where good houses are much wanted. Ground-rent moderate. Advances made; and bricks may be had on the ground. —Apply to Messrs. TEMPLE and WINDSOR, 4, Bloomfield street, Finsbury-circus.

LANDING WHARF and DRAWING-DOCK, LETT'S WHARF, near Waterloo-bridge, Surrey side. — Every accommodation is offered at this extensive wharf for landing, shipping, drawing, and warehousing goods. English and foreign timber, iron, stone, bricks, sand, coals, &c. &c. 130 feet river frontage for floats of timber, large sawpits, a thirty-ton crane for heavy goods, boilers, &c.; also a ten-ton crane.—Apply to ROUTLEDGE and SON, on the Wharf.

TO CONTRACTORS, CARMEN, BUILDERS, AND OTHERS.

A SPACIOUS COVERED WHARF, on the Regent's Canal, well adapted for landing bricks, timber, &c. A very low charge will be made, and the wharf is well situated for all parts of the West-end, Camden-town, &c.—Apply to Messrs. ROBARTS, Stone and Lime Merchants, Market Wharf, Regent's-park-basin.

TO INDIA-RUBBER MANUFACTURERS, WATERPROOFERS, AND OTHERS.

A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet. TO BE SOLD, with the connection thereto belonging in consequence of the parties retiring from that portion of the business; five stories high, with steam-engine and shafting forge, and all the machinery requisite for preparing, masticating, and cutting india-rubber in sheets, thread, &c. the whole now in full working order. Term, forty-two years; ground-rent, 95l per annum.—Apply for further particulars at Mr. LAHEE's (only) Offices, 65, New Bond street, London.

LANDWADE HALL, near NEWMARKET, CAMBRIDGESHIRE—TO BE SOLD, the MATERIALS of the ancient Elizabethan mansion, erected after designs of Mr. Buckler, F.S.A. The materials consist of handsome bay and oriel windows in stone, carved battlements, finials, noble stone staircase, richly carved stone chimney-pieces, ornamental chimney shafts, carved oak screens and doors, 900 000 bricks, 3,500 cubic feet of stone, 4,000 feet of timber, and the usual fixtures and fittings belonging to an extensive mansion, which upwards of 70 feet have been expended within the last six years. Tenders for the above to be delivered to Messrs ISAACSON and TATTERSALL, Auctioneers and Estate Agents, Newmarket, on or before the 15th day of AUGUST next If no satisfactory Tender be received, the above materials will be sold by auction in the month of September, of which due notice will be given in future advertisements.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 3,000 miles of railway.

Extract from the half yearly report of the Directors of the Midland Railway, dated January 16, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to renew their engines after every mile performed, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES HOWDEN, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS. This patent has received the unqualified approbation of some of the most eminent engineers of the day, as the most effective, economical and perfect joint in use at the present time. The simplicity of its construction is such as will allow of its application to any line of railway, without causing the slightest hindrance to the ordinary traffic during the time that it is being laid down. The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and wherever adopted must very considerably decrease working expenses. To railway companies, having old and bad roads, the principle is peculiarly advantageous, as its application will not only restore the road to a perfectly safe and serviceable state for many years, but, at the same time, bring into effect use all the old and broken chairs. To the railway world in general, it is of the highest importance, as it admits of the most locomotive, and is moreover simple and economical in principle. Every information will be given, and models forwarded for inspection, on application to the Manager, at the Offices of the Company, Wolverhampton

CRYSTAL PALACE.—DECORATIVE AND ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artiste Decorators to His Majesty the King of Hanover, and executors of the Byzantine Court, the Trissiling, the Frieze in the Renaissance, and the centre portion of the Italian Courts, Crystal Palace, Sydenham, most respectfully beg to inform the public that they have removed from 201, Piccadilly, and have considerably increased their premises. Address BEENSEN and KUCKUCK, 68, Pall-mall, London.

TO TIMBER-MERCHANTS, BUILDERS, PLASTERERS, &c

MR. JOHN RICE, 79, Tithebarn-street, Liverpool, has ON SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general.—Price and terms on application.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and Author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is" offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner. Address, Mr. BOYS, 33, Albany-street, Regent's-park.

MESSRS. RODGERS and STYRING, of SHEFFIELD, beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the DECORATION OF CHURCHES, MANSIONS, PUBLIC BUILDINGS, &c.

in the most correct style of Art, from Designs, and under the direction of H. TAYLOR BULMER, Esq. of Shrewsbury Bank, whose works may be seen at St. Barnabas Church, Pimlico; St. Mary's, Farm street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; and numerous other works in town and country.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES SILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

Prices, and every information, forwarded on application to the Works.—MARK BOWDEN and CO. Bristol.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gaslar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 318, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOBLET begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass now manufactured at WHOLESALE PRICES.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s. per case; 4ths, ditto ditto, 36s. Also 16oz. ground ditto ditto, 4d. per foot; crown and 16oz sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 2d. per foot; 4-inch rough British plate tiles, 11s. per doz. Also crown and sheet glass in crates; British and patent plate, fluted and stained glass glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John-street, Smithfield, London.

PATENT PLATE.—HARTLEY'S Rough Plate, Sheet, Crown, and Ornamental Window Glass, can be supplied in any quantities by JOSEPH POULSON, 164, Edgware-road, having one of the largest stocks on hand at all times of Patent Plate (extra large sizes), avoiding the delay consequent upon sending to the works. The usual discount allowed to the trade, builders, and surveyors. Sheet lead, pipe, solder, white lead, oils, colours, wholesale and retail.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Ex. hange, Manchester.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 86, Regent-street, and at his Steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

LEONARD SUGDEN, Manufacturer of Doors, Sashes, and Frames, and Joiner to the Trade, 59, Grange-road, Bermondsey, respectfully invites Builders and the Trade in general to an inspection of his Stock of Goods, from which they can always be supplied with every kind of Joiners' work, which for superiority of workmanship, material, and low prices, cannot be equalled by any house in London.—P.S. A full list of prices on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton, Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles, lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 304, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 8d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

GLASS PAPER and GLUE.—Important to CABINET-MAKERS.—F. J. DAY'S celebrated extra large Glass Paper, 18s. per ream; Cox's finest Scotch Glue, 67s. per ton, 6½s per cwt; finest Imperial Glue, 53l. per ton, 56s. per cwt.; best London Glue, 48l. per ton, 42s. per cwt. Russian, German, and Gelatine Glues, in great variety. Wholesale and retail, 6 and 7, New Inn-yard, Curtain-road, Shoreditch, London.—Country orders executed on receipt of a post-office order, payable as above.

BATHS AND WASHHOUSES.

1st.—REPORT.

By P. P. BALY, Esq. Mem. Inst. C.E.

ON THE ERECTION AND MANAGEMENT OF BATHS AND WASHHOUSES, PLANS, ESTIMATES, AND DETAILED INFORMATION, AND AN APPENDIX OF BYE-LAWS, FORMS OF ACCOUNT-BOOKS, &c. &c.

Published under the sanction of

THE COMMITTEE FOR PROMOTING THE ESTABLISHMENT OF BATHS AND WASHHOUSES FOR THE LABOURING CLASSES,

By EFFINGHAM WILSON, Royal Exchange, London; and to be had at the Office of Mr. WOOLCOTT, Secretary to the Committee, No. 12, Buckingham-street, Adelphi and of all Booksellers.

Report, 4s. 6d.; by post, 5s. Appendix, 8s.; by post, 8s. 6d. Both, 7s. 6d.; by post, 8s.

"When baths and washhouses for the public were ideas rather than facts, those who felt an interest in their establisment had, first of all, to inoculate the million with a sense of the benefit to be derived from them, and then to instruct the few in the best modes of erecting and sustaining them. For this purpose a central Office, to which all parties might resort for information, was essential, and rooms were consequently taken at EXETER HALL. As, however, the knowledge gained by the Committee has now been transferred to many towns, it has become less necessary to retain these expensive chambers, but before giving them up finally, the Committee asked their engineer, Mr. Baly, to put together in one Report all the available knowledge on the subject of their labours, for the use of such parishes and localities as are still unprovided with baths and washhouses. This information we have here before us, with plans and estimates for buildings of various sizes, suited for either large or small populations."—*Athenæum.*

2ND.—THE ACT 9TH AND 10TH VICTORIA, CAP. 74,

TO ENCOURAGE THE ESTABLISHMENT OF PUBLIC BATHS AND WASHHOUSES, WITH PLAIN DIRECTIONS AND FORMS FOR PUTTING THEM INTO EXECUTION,

Is published for the Committee by

MESSRS. BENNING AND CO. 43, FLEET-STREET, LONDON.

Price 6d.

Also the subsequent

ACT, 10TH AND 11TH VICTORIA, CAP. 61.

Price 2d.

Copies of both the Acts may be obtained of the SECRETARY, as above mentioned, and will be sent by post to any person sending to the Secretary's Office 1s. 2d. in postage stamps.

On Monday, the 7th of August, will be published, carefully revised and wholly reprinted, in One Volume, price Five Shillings,

HARD TIMES.

BY CHARLES DICKENS.

BRADBURY AND EVANS, 11, BOUVERIE-STREET.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,

65 to 68, LONDON-WALL, AND 49, PARLIAMENT STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

NOTICE to INVENTORS.—New Patent Law.—PATENT OFFICE, 4, Trafalgar-square, Charing-cross. The "Circular of Information," and plain instructions for the protection of inventions in the United Kingdom or foreign countries, may be had gratis, by applying personally, or by letter, pre-paid, to Messrs. PRINCE and Co.

QUANTITIES, Measurements, Dilapidation Surveys, Building Accounts, Land Surveys, &c. Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 23, St. Martin's-lane and Acton-hill.

ON HIRE.—STEAM DREDGER.—TO BE LET, by the month or for a fixed period, a twelve-horse power STEAM DREDGER, recently new fitted out. She will load a fifty-ton barge per hour, and make 8 feet water; loads either side, is 87 feet long, and 13 feet beam, with about 2 feet 6 inches draft of water. She may be now seen at work in the Lee cut, at Limehouse, and examined on application at Brunswick-lock. For terms and particulars apply to the undersigned, NATHANIEL BEARDMORE, 30, Great George-street, Westminster.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-basin, Commercial road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water pipes, Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and building fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Fluming for Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

CRYSTAL PALACE.—Railway Travellers may obtain TICKETS of INSURANCE against RAILWAY ACCIDENTS for the journey, on payment of 1d. 2d. or 3d., by inquiries of the Booking Clerk at all the principal stations where they take a Railway Ticket.—Railway Passengers' Assurance-office, 3, Old Broad-street.

WILLIAM J. VIAN, Secretary.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City road, London.

LOANS.—Persons desirous of obtaining ADVANCES, from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 37, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 1s. per post.

CHARLES JAMES TILLICK, Resident Secretary.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No V. for April, just published.

GEO. ROUTLEDGE and CO. Farringdon-street, and R. SPENCER, 314, High Holborn.

In the press, and to be published in a few days.

THE COMBUSTION of COAL and PREVENTION of SMOKE, Chemically and Practically considered.

By CHARLES WYE WILLIAMS, Assoc. Inst. C.E.

The first and second parts now complete, containing:—The Chemistry of Combustion.—The Construction of Marine and Land Boilers.—The Tubular and Flue Systems compared.—And the Economic Abatement of the Smoke Nuisance.

London: JOHN WEALE, 59, High Holborn.

GLEIG'S SCHOOL SERIES.

In 18mo. with Woodcuts, price 1s.

ELECTRICITY for the USE of BEGINNERS, in which the Principles of the Science are familiarly explained, and illustrated by numerous Experiments and Diagrams.

By T. TATE, F.R.A.S. of Kneller Training College.

Also, by Mr. Tate, in Gleig's School Series,

ASTRONOMY for BEGINNERS, price 1s.

HYDROSTATICS, HYDRAULICS, and PNEUMATICS, price 1s.

FIRST THREE BOOKS of EUCLID, price 1s.

London. LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 18mo. with Woodcuts, price 3s. 6d.

SOUND and its PHENOMENA.

By the Rev. E. C. BREWER, D.D. Trinity Hall, Cambridge, Author of "A Guide to English Composition," 12mo price 3s. 6d.

"Poetical Chronology," 12mo price 3s. 6d. &c.

London. LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. with Plate and Woodcuts, price 10s. 6d.

RESEARCHES on LIGHT in its CHEMICAL RELATIONS; embracing a Consideration of all the Photographic Processes.

By ROBERT HUNT, F.R.S. Professor of Physics in the Metropolitan School of Science.

Second edition, thoroughly revised, with extensive additions.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

On the 31st of July will be published, price 2s. each, Parts XV and XVI. of

THE ENGLISH CYCLOPÆDIA

EXTENDING IN

THE NATURAL HISTORY DIVISION from FOOD to GYROSTEUS;

AND IN

THE GEOGRAPHICAL DIVISION from EDINBURGH to GEORGIA;

Including articles on Egypt, Eifel, Katarinoslaf, Elba, the Elbe, Elbing, Elis, Elsinore, Emden, Ems (Austria), Entre Douro e Minho, Entre Rios, Ephesus, Epirus, Erfurt, Erzrum, Eschwege, Estremadura, Ethiopia, Etruria, Eubœa, Europe, Faroe, Ferrara, Fernando Po, Ferrara, Finland, Flanders, Florence, Florida, France, Frankfurt, Freyburg, Friesland, Friuli, Funen, Galicia (Austrian Galicia, (Spanish), St. Gall, Geneva, Genoa, Georgia, &c. &c.

TOMLINSON'S CYCLOPÆDIA

OF USEFUL ARTS, Mechanics, Mining, and Civil Engineering.

This work comprises upwards of 2,000 large octavo pages, and is illustrated by forty engravings on steel and 3,477 woodcuts.

London: VIRTUE, H.L.H., and VIRTUE, 25, Paternoster-row.

The Builder.

SATURDAY, JULY 29, 1854.

IN our present number will be found a view of the so-called MEDIÆVAL COURT, in the Crystal Palace at Sydenham, — which comprises a collection of great interest.*

Without disparagement of the value of the Courts" at the Crystal Palace, we have been ontinually anxious to guard against any opular idea that the isolated examples dislayed would supply the place of independent tudy. We doubt whether any other hands ould have performed the task of arrangement —one even more difficult than that of carrying ut entirely new works—better than the archiects of the Sydenham "Courts" have done. he Handbooks also are full of valuable inrmation.

But we have, at the same time, tried to show at only part of what makes up the expression architecture is exhibited; and we especially luded to the Courts now before us, as instances this peculiarly exceptional treatment. Exmples of the sculpture and ornament of Gothic t are displayed; but the real character of the *chitecture* is not shown at all. The progresve changes of styles are not explained in the ndbook, nor are the characteristics of winw tracery exhibited in the Courts,—and the ief forms of doorways are not shown. Doubtss, the main features of outline and perfective effect, in the fine cathedrals of our n country, are not unknown to non-professonal persons; and the literary exposition of othic architecture has now run over the lves of a large library; but we should still ve wished to see something here, which might t help to perpetuate the delusion that archictural expression is produced by quantity of nament, and elaboration, alone.

It might be inferred from what we have said, st such illustrations of structural architecture there are, are mainly afforded by the tombs id other minor forms, worthy of attention ther as the furniture of Gothic buildings, than integral parts of the wonderful combination—ade by distribution of plan, concentration force, and calculated thrust and counterise—the general welding of the element of auty with structural office—which makes up e distinctive character and highest merit of e style.

We cannot now attempt an exposition of the neral subject, or speak at any great length, of ese departments of the study which are illusated. But we may be able to lead to a right prehension of one branch of the style which s received less attention at Sydenham than ight have been expected.

Of the erroneous views which might be taken m a study of monuments and altar fittings ely, the Gothic works of Italy would afford idence. There is not a fact in the history of art tter capable of demonstration than that of the reign character of the style in that country. alian *Gothic* architecture, whatever may have en written to the contrary, is a thing which we light almost say there is not. In England, no oner was the Gothic element fairly introduced an all the peculiar Norman ornaments, with one two exceptions, were discarded. But in Italy, amples of Gothic architecture are either traceble to exceptionable foreign origin, or the orks present two distinct characters of art side y side, but not conjoined. The art is *Tedescan*, it was indeed called, rather than Italian; or, as in Venice, there is as much to be attributed to Saracenic influence as to any genuine native *union* of Italian spirit with German forms. In the work of Orcagna, though called Italian Gothic, we recognise little that might not pass under some other appellation. Certainly, we hardly discover a Gothic character in the altar from Or San Michele in the present collection, and little more in the beautiful Loggia dei Lanzi, which indeed has semicircular arches.

But in Rome, so far as buildings are concerned, there is no Gothic architecture at all; and this fact is apparently due as much to the constant presence of the best works of Roman art, as to the commotions of which the city was the seat. Therefore, there might have been some danger of mistakes—had the present collection given many illustrations of Italian Gothic art, presuming that these would have been confined to minor forms. Such works as there are in Rome have great interest; but the altar-pieces and *ciboria* are not even as much structural parts of buildings as many of the English works which are exhibited.

That building in Italy which most displays a Gothic element, and which we have heard named as the best example of so-called Italian Gothic, is not so much Italian as English. The church of St. Andrew, at Vercelli, has the square form of the east end, characteristic of English examples—the apsidal end of Westminster Abbey being the only important exception—and its main forms are what we recognise as Early English. The church was, in fact, founded by Cardinal Guala, who had held an important position in England in the reigns of John and Henry III. St. Andrew had been the patron saint of one of his English benefices. But so little had the Gothic style gained a position in Italy, that works which were carried out at Vercelli after the death of Guala were in the Romanesque, and like contemporary recognition of opposite systems, such as we have been in the habit of thinking peculiar to the nineteenth century, is found in other cases.

There are, of course, marked differences between the Gothic architecture of one country and that of another. The Romanesque element, as seen in the plan, prevailed longer on the continent than with us. Still, deducting the examples of Gothic architecture in Italy, which, like the cathedral of Milan, were the work of foreigners, we discover more features of resemblance between the architecture of England, France, and Germany, than between that of Italy and any of those countries. The real distinctive features of the Gothic style were, in fact, wanting. These we should probably not explain precisely as would be inferred from the Handbook. The Pointed arch was characteristic both of the Norman style of Sicily and the architecture of the Saracens; yet these were not Gothic. Even that marked feature, the window-tracery, by which we are best able to classify buildings, had been anticipated in the Saracenic. The use of natural forms is more characteristic of the later Renaissance than even our own Gothic. But no other style had given the same importance to the perpendicular line, and to loftiness of proportion generally; and it is in the full recognition of this element that the Italian Gothic seems to us deficient. Inasmuch as it was practised by those whose prepossessions were opposed to it, its position was not unlike that of the Gothic of the early revival about the commencement of the present century, or of an earlier period,—which, in fact, it resembles even more than it does the true Gothic. Nowhere else was the problem of a Gothic dome, which once engaged the attention of some of our correspondents, a likely one to be presented, as it was to Arnolfo in 1294.

It is not, however, to be inferred that the Italian Gothic art had no merits of its own. But it is in the works of painting and sculpture that these are most to be discerned: and it is the Trecento period generally, which we must study, if we would understand the growth of that remarkable style which forms the subject of illustration in the next Court. But, except the altar we have named, and one or two figures by the Pisani, we have no Italian works in what is called the French and Italian Court. The early works, by Nicolo Pisano, are spoken of—principally in the Handbook to the Renaissance Court,—although they had no doubt, as mentioned, great influence both on the Early Gothic of Italy and that of other countries.

Before stating generally what is to be seen in the "Courts," let us say that we doubt the advantage of retaining the term Mediæval for the particular styles. Those who would use it for the Gothic architecture which prevailed during the thirteenth, fourteenth, fifteenth, and sixteenth centuries, are, of course, not unaware of the fact that the Romanesque, Saracenic, and Renaissance styles also prevailed during these periods. But the general student is long *misled* by any such want of perspicuity; and it is worth some trouble in unlearning, on the part of professional inquirers, to have the matter set right. To the word Gothic there is not the same objection. It was once used in reproach, but it expresses the fact which we have been endeavouring to show—that certain styles especially were carried out by the descendants of the Gothic races.

It will be inferred, from what we have said, that there is no arrangement of the examples in the order of dates. The want of this, though difficult of attainment in most cases, is much to be regretted, as, for example, where we find Early English bosses inserted in Decorated groining.

The space appropriated to what is called the "English Mediæval Court" occupies an area of 72 feet by 48 feet. The "German Mediæval Court" is to the north of this, filling a space of 48 feet by 24 feet, and the "French and Italian Mediæval Court" has a similar space at the south. Besides these, there is the portion of the gallery at the back—24 feet wide, and the length of the space occupied by these courts; and there are some objects in the Court of Monuments of Christian Art at the central transept, and in the nave,—so that, altogether, a large area is given to the Gothic styles.

The Handbook, we may remark, has evidently been prepared before the several works were finally arranged. Plans and references, therefore, are in some disorder.

The main front of the English Court to the nave, is formed by the arcade of the cloister of Guisborough Abbey, Yorkshire, with the entrance doorway from Tintern Abbey. The fronts of the side courts are formed by clustered shafts, and arches. The principal portion is a good example of the Decorated period. But we do not suppose that the exterior of a building—which every one will see this is intended for, by the buttresses—is assumed to have been painted. The cuts in the Handbook show the jointings of the stonework, and these are, indeed, marked, though very lightly, on the plaster. The character of Gothic architecture is supposed to be, in great part, derived from the appearance of these numerous jointings; and with that effect, external polychromy would appear to be inconsistent. We must leave it, then, to be explained, whether erroneous representation is consistent with the asserted educational object, or whether the profuse decoration which prevails, has been calculated for a result in the public eye, which it was supposed could not be attained without it. The commercial object, at least, should have been secondary to the other. There is, of course, no authority for the painting of the particular figures which are placed at the sides

* See page 402.

of the doorway. The angels in the spandrils are, we must say, beautifully executed by Mr. Bulmer.

In front of the Court are the tombs of Bishops Kilkenny and Northwold, from Ely Cathedral, figures from Wells, and some other works. The use of figures of different scale, and the union of a style having the same relation to the general architecture, as the painted architecture of the Pompeian houses to their main forms, a subject upon which there has been much speculation, is worthy of attention, as being exemplified here.

The main part of the area within the façade is arranged as a cloister, and is elaborately decorated in colour and gold, in what is supposed to have been the style of the Gothic buildings,—on evidence resting rather upon the existence of ornaments similar to those introduced, in many different buildings, than in any one example. At one end is the doorway of Prince Arthur's chauntry, from Worcester Cathedral. The *fleur-de-lys* on the door of this Late Gothic example presents more than usual resemblance to the common form of Early English foliage, which no doubt was derived from the Saracenic, or the Byzantine. The stained glass in the small lights above, representing Peace and War, is well designed and executed. The door at the opposite end is from Bishop West's Chapel, in Ely Cathedral, and is remarkable for the admixture of Renaissance ornament which is to be observed in it. The small roll moulding with various animals amongst the foliage, has not been mentioned, but seems to us worthy of Ghiberti. The sides of the Court are divided into spaces by buttresses, each buttress supporting a tabernacle, in which is one of the figures from the front of Wells Cathedral. We suppose, the peculiar form of niche has not been copied from any example. It has all the appearance of instability, and resembles in character what used to be called "Carpenter's Gothic." On the upper part of the wall, spandril spaces are formed for figures from the "angel choir" of Lincoln Cathedral, and beneath the arched surface-mouldings, which are carried from buttress to buttress, are a number of bosses from Lincoln and Tewkesbury; foliage from Stone Church and elsewhere, being grouped about them. The effect of the foliage is much injured by the injudicious use of gilding, applied in the manner which we felt compelled to object to in our notice of the Roman Court. It is positively impossible to make out the design of the ornament from Bath Abbey Church, to which attention is particularly directed in the "Handbook." We do indeed believe, that gilding is always detrimental to the delicately chiselled undulations of foliated ornament; but if it was employed by the Gothic architects, the whole leaf was gilded, as in other parts of the courts;—the gold was not employed so as either totally to change, or to confuse the effect of the form.

Speaking of this subject of polychromatic decoration—although we had intended to defer it for distinct notice — we cannot allow the present opportunity to pass by without a further protest. The principal entrance to the gallery is formed by the door of the Chapter-house at Rochester. We saw the original, some years since, in all the beauty of its recent restoration. We remarked the exquisite beauty of the carved heads and foliage then, and when we saw the present copy in its state of clean plaster. All this beauty is utterly destroyed, or exchanged for a profusion of petty enrichments in colour, designed in a manner for which we venture to say there is no authority, either in precedent or in taste. The cast from the tomb of Bishop Beckington at Wells Cathedral, — "coloured and gilt on the spot in precise fac-simile of the original,"—but which, on the evidence of one of the best authorities, we believe, is not so coloured—by no means justifies, even as in the cast, the colouring which has been adopted in the doorway. We may see, that, as we said above, the leaves wholly, and not the mere stems, or edges, should be gilt.

The natural colours are seldom followed in the old works as they are here. In one example at Ely, the leaves are gold, the berries red, and the *stems* green. But we are thinking of the degree of taste which is shown in this extravagant production. There is nothing which requires so much moral courage and self-denial as polychromatic decoration. The thing is enticing, and the artist is lured on from ornament to ornament, until he finds that he has totally destroyed the *form*. This, we repeat, is just what has been done here, at an expense of something approaching to 100*l*. in one doorway, and that is what seems to be the besetting sin of the Crystal Palace architects. The countenances of the heads have positively *lost* their expression by the inartistic painting with which they have been covered. The white edges to the coloured leaves change the very form of leaf. And how is it possible to appreciate the beauty of any one of the ornaments which have been stencilled on, whilst *every* space and shaft is ornamented?

We should at the same time say, that the whole system adopted for the preservation of the works, is not satisfactory. We have never seen better executed casts than some of these were: the greatest care seems to have been given to them, and many parts have been restored, as in the Walsingham font in the centre of the Court. But much of this beauty is now lost by the thick coat of yellow slime with which most of them have been covered, and which clogs up many of the interstices which contribute so much to effect. It is not for us to say how casts should be preserved; but certainly not thus. Recent discoveries might have suggested experiments with a view to a better system. Let any one compare the effect of the Walsingham font, happily still unpainted, with what is around.

The entrances to the court, north and south, are by doorways modified from the triforium of Lincoln Cathedral, and are similar to each other. There is no representation of the best form of Early English doorway with isolated shafts and dog-tooth ornament.

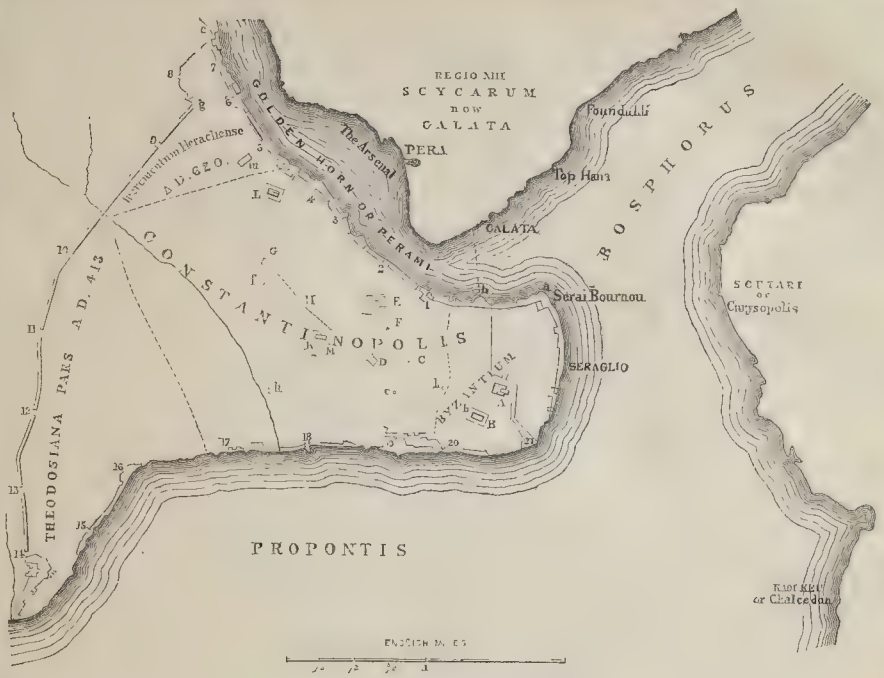
Niches from Beverley Minster and Ely Chapter-house, the Easter sepulchres from Hawton and Lincoln, the tomb of Humphrey de Bohun from Hereford, the oriel from John O'Gaunt's Palace, and one of the doors of Lichfield, are amongst the principal works which we must leave unnoticed, besides the tombs of Queen Eleanor, Edward II. Edward the Black Prince, and William of Wykeham.

The view which we have engraved, however, shows the principal objects. The Court is seen from the right side as you enter from the nave, looking towards the gardens. The monument on the right-hand side, in the foreground, is that of William of Wykeham; the monument on the left, Queen Eleanor's. Behind these are monuments of Edward II. and Edward the Black Prince. The Walsingham font is in the centre; and right and left of it, against the wall at the back, Humphrey de Bohun and the Hawton sepulchre. The doorway to the German court, John O'Gaunt's window, the upper part of figures from Henry's VII.'s Chapel at Westminster, and some of the Lincoln angels (in the spandrils above), are seen on the left-hand side of the view.

In the gallery we have the Arderne tomb, that of Richard II. and Anne of Bohemia, and those of John of Eltham, Bishop Conrad of Weinsburgh, Henry IV. Joan of Navarre, Richard Beauchamp Earl of Warwick, and Sir Giles Daubeny, and the work called "the Deposition," from Mayence. In the gallery, opposite the Rochester door, is a window with good stained glass, representing painting, sculpture, and architecture: the plan of the Houses of Parliament is displayed as part of the latter subject. The centre space of the gallery is groined: the capitals of the piers are well-selected examples from Southwell Minster.

Of the two other Courts, we have little room to speak. Italian art, as we said, has but few illustrations. But, there is a fine series of sculptures from Notre Dame, which also extend along the west wall of the gallery, and there is a copy of the ironwork from one of the doors of the same building. The German Court is very interesting, from the several doorways which there are—presenting new forms of art, even to our professional readers—for the series of monuments to the Archbishop Electors of Mayence, and for the beautiful sculptures by Adam Krafft and Veit Stoss. Without the study of German art, it is scarcely possible to understand fully of what sculpture in Gothic art was capable.—Here is the figure of St George and the Dragon from Prague.

The Court of Monuments of Christian Art contains the monument of the Lady Abbess from Chichester Cathedral, so greatly admired by Flaxman, the shrine of Cantilupe, Bishop of Hereford, and the monuments of Edward III. from Westminster, the Priest from Beverley Minster, Bishop Bridport from Salisbury, and Abbot Wakeman from Tewkesbury.



The collection of illustrations of monuments and of details of ornament at the Crystal Palace, is therefore most interesting and valuable; and we trust that some means will be found by which the directors may allow opportunities for study. These would be turned to good account by architectural students. We have regretted some things in what we have examined, but this will not prevent us from testifying to the value of the collection, and the skill of many sorts displayed in it.

ON THE TOPOGRAPHY AND ANTIQUITIES OF CONSTANTINOPLE.*

I HAVE some doubts as to the success of this experiment which I am about to make. Through a succession of seasons I have been indulged with a hearing once a year, and the scene of my antiquarian excursions has hitherto been limited to the ancient metropolis of the Western Empire. Events which occupy the mind of Europe, rather than any particular wish of our own, have transported us to the shores of the Bosphorus, and perched us, in spite of ourselves, upon the heights of Scutari. But launching forth from the Tiber to the untried waters of the Bosphorus, I do not navigate without chart and compass, nor am I about to describe a city I have never seen. It was my lot in 1834 to cast anchor in the Perami, and wander for some days about the Bosphorus and the Euxine Sea. It is the result of my poor researches into the Topography and Antiquities of Constantinople that I propose to give you. I shall endeavour to make my paper consistent with the requirements of these conversazioni. I must bear in mind that I address architects, who, though not averse to an occasional reference to the modern city, will naturally look for the vestiges of those works which were made under the Greek emperors before the arts declined, and ere classic architecture fell before mosque and minarets: we must begin with a page of ancient story.

658 years B.C. the navigator Byzas, said to be the son of Neptune, arrived at the eastern promontory of Europe, and there he founded the celebrated city which was called after his own name, Byzantium: its first inhabitants were probably not much better than the followers of Romulus. They seem to have been the Bashi Bazouks of those early days, who we may freely translate to signify plunderers, rascals. The situation of this city was admirably selected; and it enabled the Byzantines to che

* By the Rev. R. Burgess, B.D. Read at Meeting of the Institute of Architects, June 26th.

PLAN OF CONSTANTINOPLE.

e kings of Bithynia, and to fight with success ainst Philip of Macedon, and to stem for hile the inundations of the Gauls when they shed into the centre of Asia Minor. Pausanias, e Spartan general, after the defeat of Xerxes, tified the place, and I shall shortly point out s limited space which was occupied by the iginal city. The advantageous position of zantium was soon discerned by the Roman perors. It is thought that Augustus con- ved the idea of transferring the seat of vernment to the Bosphorus, and not im- obably the splendid Ode, lib. iii. ode 3, which claims the vengeance of Juno upon the empt, was written by Horace with the view deterring the emperor from the audacious erprise. 300 years elapsed, and then Dio- tian revived the idea of fixing the seat of pire nearer to Asia. The first Christian peror determined to carry the plan into ect, and he drew the line of his fortifications hin sight of the scene of his good fortune. was at Chrysopolis (now Scutari) where he ined his final victory over his rival for empire, ich made him the undisputed master of the man world. When Constantine began to ild the city which still bears his name, he nd an ample supply of materials within a few rs' reach. The forests of the Black Sea nished him with wood: the neighbouring and of Proconnesus afforded abundance of rble: the cities of Greece and Asia gave up works of Phidias, Lysippus, and Praxitales; even Rome contributed of its stores of art to bellish the new capital: it was finished and dicated in 334. 150 years after, during the gn of Arcadius and Honorius, who divided the pire between them, a catalogue was made of the public buildings in each quarter, like the rionaries of Victor and Rufus at Rome. This ument is extant, and is known under the title the "Notitia:" the author is unknown. It s first published by Guido Panciroli, and it ped Gyllius to find his way in the compara- e Topography of the two capitals of the man Empire. But Constantinople received a considerable addition to its extent under Theodosius II., 413, as I shall have occasion to point out when we come to make the circuit. Another portion added by Heraclius in 620, must also be taken into account before we get the whole of what is now enclosed by the triple wall of Stamboul. The lively waters of the Bosphorus, after rushing out of the Euxine Sea and flowing in a winding channel for 20 miles, break against a triangular shaped promontory, which forms the eastern extremity of Europe. They are then parted into the Propontis and the canal of Perami, which forms the magnificent harbour of Stamboul. The ancients compared this canal, with its winding branches, to a stag's horn, and it is called by Strabo the Horn of the Byzantines; but the antlers are now broken off. It is capable of containing 1,200 ships of the largest size. On the side of the Horn opposite to Galata rise the mosques and habitations of Constantinople. The city is a triangular figure, about 13 miles in perimeter, along a shore extending from east to north to a distance of 3 miles, forming *one* side of the triangle. There were anciently twelve gates which opened upon the port: most of them still remain in their original sites, and retain their ancient names in the present Turkish designations,—the one at the Seraglio Point, called the Porta Eugenii, (*a*)—another, nearly opposite St. Sophia, called Porta Neoria, or Naval Gate (*b*), and now, in Turkish, Tchifout Capoussi, are no longer in use. It was from the Porta Navalis that the chain was suspended which (drawn across to what is now Galata) shut up the entrance into the Golden Horn. I have, in former times, fought so many battles over the Gates of Romulus, which, after all, may never have existed, that I should feel reluctant to engage in a controversy about the names of the Gates of Constantine, particularly as we should have not only to cope with various readings of Greek, but to adjust the value of a Turkish translation. To proceed with our gates.—No. 1. Ghemi Iskelè, or the Fruit Gate, called also Zindan Capoussi: it was anciently called the πυλη των καραβιων, or Gate of Boats, and it is at this time the principal landing-place for the caiques crossing the port from Pera. No. 2. Oun Kapaneu Capoussi, anciently the Porta Farinaria, the gate by which the corn was taken into the city: it is now closed. No. 3. Djubali Capoussi, or the Glazier's Gate: I cannot find an ancient name for this. No. 4. Aia Capoussi, that is πυλη αγια, the Holy Gate, so called because the people landed there to go to the Church of S. Theodosia; and it is remarkable that the Turks should have annexed the Greek adjective αια, or αγια, holy, to their Turkish substantive of Capoussi. We come now to the Fanar, which is the quarter of the city that has been inhabited by the Greek princes and nobles ever since the fall of the Greek empire. The heroes, descendants of the Cantecuzene and Palæologi, who went forth to fight for freedom in 1820, were principally Fanariotes. The Fanar Gate is still called by the Turks, No. 5, Petri Capoussi, or the Gate of Peter. Indeed, the whole district was named after the Apostle of the circumcision. The Regio Petri is celebrated in the siege of Constantinople, 1453. When Mahmoud II. had transported his light ships overland from the Bosphorus, not being able to force the chain drawn across from the Porta Neoria, he launched his boats nearly opposite the Gate of Peter. Notaras defended the gate with great valour, but his abject submission to the conqueror afterwards, tarnished his renown. If he had had a single screw steamer, the multitude of light ships which had been carried over the heights of Pera had never shaken the Gate of the Fanar. This gate, like all the rest on the port, is narrow and low, a mere opening in the curtain of the wall: just within it stands the house of the Greek patriarch, and the patriarchal Church of St. George, to which we shall again recur. No. 6 is the gate which leads to the Jews' quarter, called Balat, which, in all probability, is a corruption of Palatium, for the gate formerly was the βασιλικη πυλη, or Royal Gate, leading to

an imperial residence, of which there are some remains. No. 7 is Haivan Hissari, anciently called Cynegeton, or the Gate of the Vivarium, the place where wild beasts were kept for the use of the amphitheatre, which was situated at this extremity of the city. The Chiloporta (c) at the very angle of the city is closed. Before leaving the enclosure of the Balat, we have the Egree Capoussi (No. 8), anciently called Charsias. Towering above the city walls, we see the structure of a building which is called the Palace of Constantine, but ought rather to be called the Palace of Heraclius, for we are now in that portion of the city which was added by that emperor in 620. From hence we strike across the continent to pursue the line of walls which stretch from the Perami Canal to the Sea of Marmora, a length of about four miles, and forming the base of the triangle or harp, to which may be likened the form of Stamboul. No. 9, the Edrene Capoussi, or Hadrianople Gate, anciently Poliandron, may be considered as the first that occurs in the walls of Theodosius. A few words of general description will be in place here.

These walls present a triple line, and have retained, in a great measure, their original appearance. The inner wall is the highest of the three ranges, and it is strengthened by lofty towers, indifferently square, circular, or octagonal. The second or middle wall is much lower, and the towers less, being generally circular; and the third, or outer wall, with batteries running along the top, serves as the barrier of the ditch or fosse that runs before it. "The intervals between these walls are 18 feet wide, and are in many places choked up with earth and masses of fallen ramparts." The materials are almost invariably stone and brick, in alternate courses. The towers in some parts are completely clad with ivy, in others half ruined and half overshadowed by the fig-tree, which has caused the rent, "mala robora ficus." The solitude beneath these ramparts is as complete as it is in the vicinity of the walls of Rome, and it is saddened by the melancholy groves of cypress trees which stand over the Mussulmans' graves. Passing the Edrena Capoussi, we must stop for a few moments at the next, No. 10. It was called S. Romanus: the Turks now call it Top Capoussi, or the Cannon Gate, on account of the great event which took place in 1453. It was here that the last of the Constantines bravely fought and fell before the overpowering force of Mahmoud II.: his body was found after some days under heaps of slain, and was only recognised by the silver eagles upon his slippers:—if ever

> "The city won for Allah from the Giaour,
> The Giaour from Othman's race again may wrest,"

the great struggle will be at the Top Capoussi: there the assailants would be beyond the reach of war vessels in the ports, and the heights of Scutari are too distant to afford protection: in short, the whole line of wall, from the Blachernæ to the seven towers, would require to be covered, if 50,000 Russians should ever cross the Balkan. A little further, and we arrive at the Mevlanè Yeni Gate, No. 11, called in former times Melandisia. It bears upon the long lintel, which rests upon two consols, a Greek inscription, and the following in Latin:—

> "Theodosi jussis gemino nec mense peracto
> Constantinus ovans hæc mœnia forma locavit
> Tam cito tam stabilem Pallus vix conderet arcem."

Nos. 12 and 13 are respectively the Selivri and the Kapaneu Gate, anciently the Porta Quintii, and the Porta Attali. We now arrive at the enclosure which surrounds the Golden Gate, and the Yedi Kouleler, No. 14, or Seven Towers. Considering the Seraglio Point, where the Sublime Porte exists, to be the seat of government, we are now at the farthest extremity of the city. Behind the trees which hang from the walls, and flanked by two large square marble towers, is discerned the Porta Aurea, or Golden Gate: this was, in fact, a triumphal arch built by Theodosius, to commemorate his defeat of Maximus. Compared with similar monuments at Rome, there is nothing remarkable in it for richness of ornament, or elegance of construction: on the top of it stood a statue of Theodosius, which, after being thrown down by an earthquake, was replaced by a statue of Victory. The inscription upon it, which is still legible, is this—

> "Hæc loca Theodosius decorat post fata tyranni
> Aurea sæcla gerit qui portam construet auro."

In the time of the Greek emperors there was a fortress at this extremity of the walls: it was called Cyclobion. The Latin armies, who attacked Constantinople by the golden gate, destroyed it. John Cantacuzene rebuilt it, but it was in ruins when Bajazet threatened the city. Mahomet II. the conqueror of Constantinople, finally rebuilt the fortress on the same site, and added several towers. The Greeks called them Heptapirghion; the Turks, Yedi Kouleler, the seven towers. I could only discern four rising conspicuously above the outer walls of the city; in one of these, that nearest the Golden Gate, the foreign ambassadors used to be stowed whenever they displeased the Sultans. The times are changed, and perhaps the Sultans might find a lodging in the same tower, if they chance to displease the foreign ambassadors. This may be called the Bastile of Constantinople. It was within these gloomy walls that Brancovan, Prince of Wallachia, with his wife and four sons, were put to death; while Demetrius Cantemir, who had betrayed the unfortunate prince, was satiated with the favours of Sultan Achmet. During the French wars, a Russian ambassador, Count de Bucalof, was imprisoned here for nearly two years; also a French ambassador, Rufin, who was severely treated. Even as late as half a century ago, Sir John Arbuthnot was threatened with a lodging in the seven towers. There might be no objection perhaps to grant a lodging there now to a Russian ambassador. But at present the successor of Baraguay d'Hilliers and Lord Stratford de Redcliffe, may look at the Yedi Kouleler with as little apprehension as I did on the last day of July, 1834. We have now to run along the third side of the triangle, which extends from the seven towers to the Seraglio, and is washed by the waters of the Propontis. The first gate that occurs is the Gate of the Bombshells, Narlen Kapou (15). The second retains its Greek appellation, Psamatia (16), or the Sandgate, and it gives the name to the quarter of the city to which it immediately leads, in which there is a considerable population of Greeks and Armenians. It contains churches, dedicated to St. Nicolas, St. Polycarp, and St. Basilius: it is probable that St. Nicolas is the least popular at this moment! The walls now recede from the line of shore, and form an angle at the Gate of Daoud Pascha (17), probably the ancient port of S. Emilianus. From here begins a valley which runs across to the Perami, and divides the city of Constantine from that of Theodosius. It is a thinly inhabited quarter, with a towering mosque. Gardens, not warehouses, occupy much of the space, and the whole has the appearance of a Turkish village. The next, that is, the fourth gate on this side, is Yeni Capoussi (18), or Newgate. We next arrive at Koum Capoussi (19), another Sandgate; and from here to the Seraglio we obtain in our circuit glimpses of the original work of Constantine, patched by Genoese and Venetian construction,—towers built upon rows of columns inserted lengthways, and fragments of marble starting out of crumbling heaps in admired disorder: this portion of the line of wall which ends at the Tchatladi Capoussi (20), is a faithful representative of the Turkish empire. Like these walls, it is built up of heterogeneous materials, and fragments kept together by cement got by foreign aid, capable of little resistance, and presenting a motley sort of construction of the Arabesque order. The last gate (21), Akhour Capoussi, or the Stable Gate, so called because it leads to the stables of the Harem, and from it begins the enclosure of the Seraglio. With these mysterious walls we round the promontory which forms the eastern extremity of Europe, and represents the apex, somewhat flattened, of the triangle whose perimeter we have now measured. Bondelmonte reckons from the angle at Blackernes to the Golden Gate 180 towers; from these to the Cape S. Demetrius, 110; and he makes the whole circuit of the walls eighteen miles; but this must be meant to include Galata, on the other side of Perami,—a suburb of Constantinople we have yet to describe. In order to proceed with this, I must take you in a light caique from the Seraglio Point, Serai-Bournou, across to Tophanè, and we arrive at Galata, to which must be added Pera. These two suburbs separated from the Stamboul of the Turks by the Perami canal or harbour, were possessed by a colony of Genoese. After the holy wars had ceased, at the end of the thirteenth century, they obtained the suburb as a fief from the elder Andronicus, and they surrounded and fortified it with walls. The Venetians attempted to wrest it out of the hands of their rivals, but in 1352, the Genoese were victorious. They engrossed the commerce of the East for a century, and their wealth enabled them to overawe the enfeebled power of the Greek empire. They made a struggle against the formidable Mahmoud II. but were involved in the general ruin of Constantinople. The walls of their city have stood unto this day. They run from the artillery barracks of Tophanè, to the mariners', near Cassim Pacha, along the shore of the Perami: they ascend the hill in a zigzag line to the tower of Galata, and descend to the vicinity of the grand mosque of Mahmoud. They are built of small square stones, with numerous fragments of antiquity filling up the voids. The towers are round or square, as it happens, and it appears the colony was governed by a Podestà. I copied this inscription—"*Spectabil Nobil Ilarius Imperialis Potas Pere*," but I know nothing more of this respectable noble Ilarius than this inscription. I found the dates 1433—1447 upon the towers, and it was only six years after the latter date that Constantinople was taken by the Turks. This district now known as Galata, was anciently called the "Regio Sycarum," or the fig-trees: in the ancient "Notitia," it is registered as the XIII. Region; and it bears about the same relation to Constantinople proper, as the Transtiberine Region at Rome bears to the Seven hilled City on the left bank of the Tiber. The Emperor Honorius built a forum and theatre here, and there was a temple of Amphiaraus and another of Diana Lucifera. The Emperor Justinian joined this region to the main city by a bridge thrown across the harbour, and he gave it the privileges of a municipality, with the name of Justianopolis; but the name is now only to be found in the pages of Procopius. A few broken columns employed in the Genoese houses, or lying in the corner of the streets, are all the vestiges that can be found of the ancient monuments. I need not bring you back to Galata and Pera, for, except the arsenal of Cassim Pacha, we should find few objects worthy of a Cicerone. We now embark again in our light caique at Tophanè, and cross the Bosphorus to the port of Scutari, a distance of two miles. If we ascend to the top of Bouyaloue, we obtain a magnificent view of the cities we have already surveyed. We see into the gulf of Nicomedia, and the eye runs along the western shore of the Bosphorus: the mountains of Asia appear to fall in azure folds: in the distance we look over the fields of Europe and catch a view of the Propontis. Chalcedon now Kadikeu, lies at the foot of the mountain and the name of St. Euphemia preserves the remembrance of the famous council held in 451 when the heresy of Eutyches, to which the Armenians still adhere, was condemned: the founders of Chalcedon have become immortal by contempt, for having selected so ineligible a position for a city, when they had the promontory before them, on which Byas, with more discerning eye, founded his city thirty years after. But Kadikeu or Chalcedon still serves for our topography, for as the Bosphorus begins to expand its waters into the Propontis it passes between Byzantium and the ancient Chalcedon. From Kadikeu we may ascend to the vast cemetery of Scutari: this is a forest of cypresses extending for several miles, and in the deep recesses of its gloom are interred the remains of pious Mussulmans of many generations. Every true follower of Mahomet prefers the country of the prophet for his last resting-place: he considers Asia, not Europe, his home: he believes his mortal remains will be better protected from the profanation of the infidel: but perhaps none of the myriads which now sleep in the dust ever dreamt that some 25,000 Giaours or infidels would, in the year of Hegira, 1270, be taking their pastime among the cypress groves of Scutari. This Asiatic suburb, although

said to be as large and populous as Smyrna, has more the aspect of a village than a large town, except about the port. I speak of its ordinary appearance. It occupies the site of the ancient Chrysopolis, and was in the time of the Crusades covered with the armies of Godfrey de Boulogne. I have already said that it was upon those heights above the port where Constantine triumphed over the last of his rivals for empire, the unfortunate Licinius was taken captive to adorn the triumph of the conqueror. The barracks which are, or have been occupied by the British troops, were originally built by Sultan Selim, and after being burnt in the Janissary war of 1832, were reconstructed as they now exist by the father of the present Sultan. The gaiety which reigns around the open fields and barracks of Scutari, contrast strangely with the gloom of the sepulchres. Life and death appear to go hand in hand. Under the shade of the cypress-trees are groups of females in gay attire, resting against the painted turbans on the tombs, and squatting on the graves of their relations: the merry laugh goes round, and not a thought of gloom appears to cross their revelry. The Arlabats which jingle past are saluted from the tombs as gaily as from the balcony, and the grave which has not yet grown green is the scene of life among the dead. The most imposing tomb I saw was formed of a canopy resting on four columns, covering an ample space: it was the resting-place of no distinguished warrior or statesman, but the tomb of Sultan Osman's favourite horse. The great sight at Scutari is the performance of the howling dervishes, but the description of "this religious liberty" I leave to "our own correspondent."*

* To be continued.

OUR CATHEDRALS AND SHOW RUINS.

TIME allowed me to stop a few hours at St. Alban's yesterday; and as the old abbey is always a subject of great interest both to the antiquary and the architect, at the inn I stopped at I made inquiries as to the way to this noble relic of the piety, as well as the wealth, of by-gone days. I had to get *my ticket* at the inn, for which I paid the sum of sixpence. If the tower is to be seen, or the view from the top of it, you have to get another ticket, and to pay an extra shilling. I could not help reflecting, as I walked along, that it was an odd kind of proceeding that a publican should sell tickets to view a church;—hardly decent, is it? However, in I went, and presented my ticket, as I should have done had it been a theatre. At the same time, as I walked in, a gentleman entered and just looked at a window, a screen, or something else. He, unfortunately, did not know of this ticket system, and when asked, appeared somewhat surprised, and offered to pay; but, no, the ticket must be obtained from the publican—and only through the publican and sinner can you enter this church. So after trying to get another glimpse at the sacred edifice, the stranger was somewhat rudely directed, by the official in a rusty black robe, to retire. He did retire, and, I suppose, somewhat in disgust, for all the time I was there he did not again appear. These are petty annoyances that ought not to be. Some short time after a pair of enthusiastic photographists entered with all their paraphernalia, and commenced fixing their machine; but Rusty Robe was soon after them, and from what I could see, and the energetic expressions visible in their countenances, not very gentle words passed between them. The result appeared to be a rush to obtain the rector's permission—I dare say, no very difficult task. But why all this fuss in England?—there is none abroad, except in the Protestant Church. At Rouen, all the churches are open and free—no ticket is required, except in one instance, the Protestant church. There a clerk, or sexton, or dirty girl is to be sent for before you can get into the church, and you find your patience and time running fast from you. This is all very contemptible.

I have travelled over great part of England, and by dint of patience and small coin have seen most of the finest works in the country; and as it is a general satisfaction to John Bull to know, I have paid for it too. The difficulty of seeing has not been my only trouble, for in many instances my pencil has been stopped,—"You mustn't sketch," has frequently annoyed me. Not at St. Alban's, though. Some time ago, at Canterbury, my flying note-book gave great umbrage to the woman who acted as *showman;* and the little rambling notes were accompanied by the awful prohibition, interspersed with very *lucid* descriptions of the great and the unknown, whose dust mingles with the soil of the sacred charnel-house; but as my book contained merely written notes with a few illustrative lines, I still persisted in viewing the cathedral in my own way.

Canterbury Cathedral is not the only "mustn't sketch" place. At New College, Oxford, the same law is enforced, and at Fountains Abbey: here you are led about by a guide, after paying your shilling. It happened in my case that I stopped at Ripon on purpose to obtain some particular information at Fountains: it was five o'clock when I arrived there; scarcely a dozen people in the place. I innocently took out my book, when the "mustn't sketch" was announced. As to getting an order, that would have been impossible then; so that if I had not kept my book open (a small octavo), and proceeded to write and to scratch, I should have been put to considerable expense for nothing.

I cannot for the life of me understand why a poor follower of the art may not make use of his only weapon of offence and defence (the pencil) without exciting the jealousy or what not of the rich possessors of the works of art. It ought to be commended and encouraged rather than prevented; for it is only by the study of these great works that art is likely to advance in this country. It is now about a year since I visited Fountains. The restriction may have been removed: I trust it is so, not only in this but in all other cases. ARCHI.

WHITEHALL AND GOVERNMENT OFFICES.

THERE have been frequent discussions of late upon the necessity of further accommodation for the Government Offices. I will not at present stop to remark upon the wasteful manner in which the vacant ground at the lower end of Downing-street and Fludyer-street has been suffered to lie unproductive for twenty-five years, while heavy rents have been incurred for private houses in various inconvenient situations, but will venture to offer another suggestion, which, if carried out, would, I think, completely remedy the want complained of, and at the same time effect a grand and striking improvement in the principal approach to the Houses of Parliament.

The Banqueting House at Whitehall (now the Chapel Royal) is one of the most beautiful buildings in London, but from its being in the form of a parallelogram and of uniform height, it is less effective as a substantive building than it would be as a wing to a larger erection: indeed, it is well known to have been only a portion of Inigo Jones's original design. Now, what I would propose is, that a corresponding structure should be erected at the southern extremity of the ground, abutting on the Duke of Buccleuch's garden, and that these two wings should be connected by a handsome centre of somewhat lower elevation, with a large open archway (or archways) in the middle to afford a direct entrance to Privy-gardens, instead of the present circuitous one.*

It seems to me that so broad a street as Whitehall requires buildings on each side to give it a proper effect, and the one proposed would harmonise extremely well with that on the opposite side, comprising the Council Office, Board of Trade, and Home Office. The whole site is Crown land, and is already in the possession of Government, except the small portion occupied by Lady Dover's stables, which I presume is only held on lease.

I do not by this scheme contemplate interfering at all with the present use of the Royal Chapel. Even if it could be dispensed with as a place of worship, it would be a profanation of Rubens's celebrated ceiling to cut up the interior for offices; and I have no doubt that the proposed centre building and south wing would afford ample space for what is required.

A MIDDLESEX MAGISTRATE.

* This, however, is by no means an essential part of the plan, if it is thought that the space can be better employed.

SPLENDOUR IN ANCIENT ORIENTAL EDIFICES.

IN Neale's new work on "Islamism; its Rise and Progress; or the Present and Past Condition of the Turks," lately published by Madden of Leadenhall-street, are some vivid sketches of Eastern magnificence, in temples and other structures, of which we shall give a few particulars.

The Palace of Khosrus, in Persia, was a subject of astonishment to the Islamites during the conquest of that country. "Amongst the astonishing wealth and luxury found within its halls, we are informed that the wardrobes were full of brilliant apparel, and all the suites of rooms furnished throughout with Oriental luxury. A silken carpet covered the flooring of one vast room, and had been wrought to represent a garden. The petals of various flowers were represented by appropriately-coloured gems and pearls, whilst all the leaves were emeralds, and the fountains were diamonds and sapphires. In the hall of audience, the vaulted roof was constructed to represent a firmament, with golden spheres and corresponding movements, to represent the planets and the zodiacal signs: a jewelled crown of immense weight hung suspended from the ceiling by a strong gold chain, immediately over a magnificent throne supported on silver columns. * * * We are told that the fifth portion of the spoil, sent according to usage to Medina, formed heavy loads for 900 strong camels; and though well accustomed to the frequent arrival of rich booty, the caliph and the people were astonished and rejoiced beyond measure when this extensive caravan reached its destination. A mosque was built out of part of the proceeds; and the superb carpet already alluded to, after many discussions between the caliph and the wise counsellors of Medina, was literally cut into pieces, without attention to the pattern, and so divided amongst the chiefs of Arabia. One share alone is said to have fetched 8,000 drachms of silver."

The Indian Pagoda of Sumnaut, as it appeared to these conquering hosts, is thus described. "The lofty and magnificent roof was sustained by not less than fifty-six pillars covered with thick plates of gold, and inlaid at intervals with precious stones from the mines of the upper provinces of India. * * * On entering, with their hands yet firmly glued to their gory sabres, the plunderers drew back, awhile overawed at the magnificent interior. One pendant lamp in the centre illumined the whole of the spacious fabric; being reflected from the innumerable jewels with which the walls were bespangled, and mingling in its glorious rays of light every hue. In the centre stood the supreme idol, Sumnaut himself, composed of one entire stone of immense dimensions,—fifty cubits in height, forty-seven of which were under-ground. * * * Around the dome were scattered thousands of minor images, in gold and silver, of various shapes and dimensions, this temple being not only dedicated to the worship of the grand idol Sumnaut, but a sort of Pantheon, wherein were collected specimens of all the many-handed and many-fingered sawmies which are adored by the superstitious natives, even to this day, over the greater portion of the vast continent of India. * * * When the crafty priests, who alone possessed the secret of the immense wealth of the idol, offered Mahmoud for its preservation a treasury in money and jewels equal in valuation to ten millions sterling—that prince rejected the offer. Huge sledge-hammers were wielded by the most powerful men in his army. One powerful arm rent the strong fabric in twain: all along the centre was an artificial hollow, that had been scooped out unreckoned centuries before, but which had served as a receptacle till crammed up to the very summit, when the top was ingeniously cemented over. The idol of countless generations tottered upon its pedestal

for a moment; and, as it fell, the fragments flew all over the temple, and then, forth upon the centre of the floor rolled one immense heap of diamonds, emeralds, and rubies, exceeding in value, it is said, at least a hundred-fold the original ransom offered,—a ransom which, in any age, would be considered as munificent. Thus fell the idol of Sumnaut—the superstitious object of veneration to a hundred ages."

The table which Tarik found at Toledo, and which was attributed to Solomon, the son of David, merits a place beside these Eastern splendours. "Its fabric was of pure gold, set with the most precious pearls, rubies, and emeralds: around it was a row of each of these valuable gems, and the whole was, besides, covered with jewels, so large and bright that never did human eye behold anything comparable to it. Toledo being the capital of the kingdom, there was no jewel, however costly, no article, however precious, which could not be procured in it: this and other causes concurred to ornament and embellish that inestimable object. When the Moslems entered Toledo it was found on the great altar of their principal church."

CHURCH BUILDING NEWS.

Lowestoft.—The new district church of St. John, in South Lowestoft, which has excited great interest throughout the district, was consecrated on the 15th inst. The first stone was laid on 27th of July, 1853, and, except the spire, the church is very nearly completed. The style is Decorated. The plan consists of a nave, two transepts, a south aisle, and a chancel at the south-east corner. The tower from which the spire is to spring is placed. The general dimensions are as follow:—Length of nave from west window to chancel arch, 82 feet 6 inches; ditto width, 25 feet 6 inches; length of chancel, 27 feet 9 inches; ditto width, 20 feet; north to south across the transept, 96 feet; width of transept, 23 feet 6 inches; total length of nave and chancel, 110 feet 6 inches; height from floor to cornice of nave, 25 feet 6 inches; ditto from floor to ridge, 45 feet 9 inches; height from floor to cornice of chancel, 21 feet; ditto from floor to ridge, 38 feet; ditto from floor to cornice of transept, 23 feet; ditto from floor to ridge, 42 feet; width of tower at base, 11 square feet; height from ground to spring of broach, 65 feet; total height of tower and spire combined, 135 feet. The edifice has three entrances—one within a porch at south-west end of nave, and the other two at the transepts; and seventeen windows give light to the interior, their different designs adding much variety to the details. The materials of which the fabric is built consist of Kentish rag facing, with Caen stone dressings to the angles, windows, doors, buttresses, and gables. The roofs are slated with green grey Welsh rags, and crested with ornamental earthenware ridge cresting. The gables of nave, chancel, and south transept are finished with stone crosses. The interior of the church is somewhat spoiled by want of length in the nave; but this, it is hoped, will be remedied by a future extension, provision for which has been made on the north side by piers and arches, at present temporarily fitted in with windows, though having a permanent appearance. The east window is short in its proportions, but this is sought to be obviated by stilting the cowinson arch and making it concentric with the curved ribs of the chancel roof, and fitting in the spandril with a quatrefoiled circle and foliated ogee tracery. All the roofs are open timbered. The font stem is composed of two squares piercing each other on the plan, forming thus the eight angles of the base and bowl. These angles are also moulded with the wave bowtell, and finished at bottom with a chamfer stop, and at top with a foliated niche head stop. The bowl is moulded on the top edge, and the angles sunk and enriched with ball flowers. Perhaps the most remarkable feature of the church is the hagioscope. This is pierced through the piers of the north transept and chancel arches, and enables most of the congregation behind to see both the pulpit and reading-desk. Its adaptation in the present instance to a useful purpose is worthy of imitation. The sittings are of deal, and will be stained and varnished. Those in the nave and north transept will be enclosed by doors. It is to be regretted that the funds did not allow of more ornamental sittings, and the materials to be of wainscot. The alleys and space in front of the pulpit and reading-desk are paved with Portland cement on concrete. The chancel is paved with Peake's terro-metallic tiles, blue and red in ornamental patterns. The church is calculated to contain 750 sittings, 300 free. The architect was Mr. J. L. Clemence, of Lowestoft, and the total cost of the church will be upwards of 6,000*l.*

Yarmouth.—On Wednesday in last week, the first stone of the new congregational chapel was laid in this town by Mr. S. M. Peto, M.P. The chapel, which is to be built in the Norman style, from designs by Mr. Kerr, formerly of Norwich, is estimated to cost 2,500*l.* and will provide sittings for 900 persons. At each angle, a tower, 56 feet in height, will be placed.

Orsett.—Mr. T. J. Wallis, son of Mr. John Wallis, of Orsett, Essex, has constructed, after six months' labour, a model of Orsett Church, restored under the direction of the rector, the Rev. J. Blomfield. The model is constructed to a scale of one-tenth of an inch, and shows both the exterior and interior arrangements of the church. The pews, organ, monuments, and painted windows are minutely shown. Mr. Wallis has been requested to place it in a public exhibition. This, however, he has declined, but he will be happy, it is said, to show it to any one visiting Orsett.

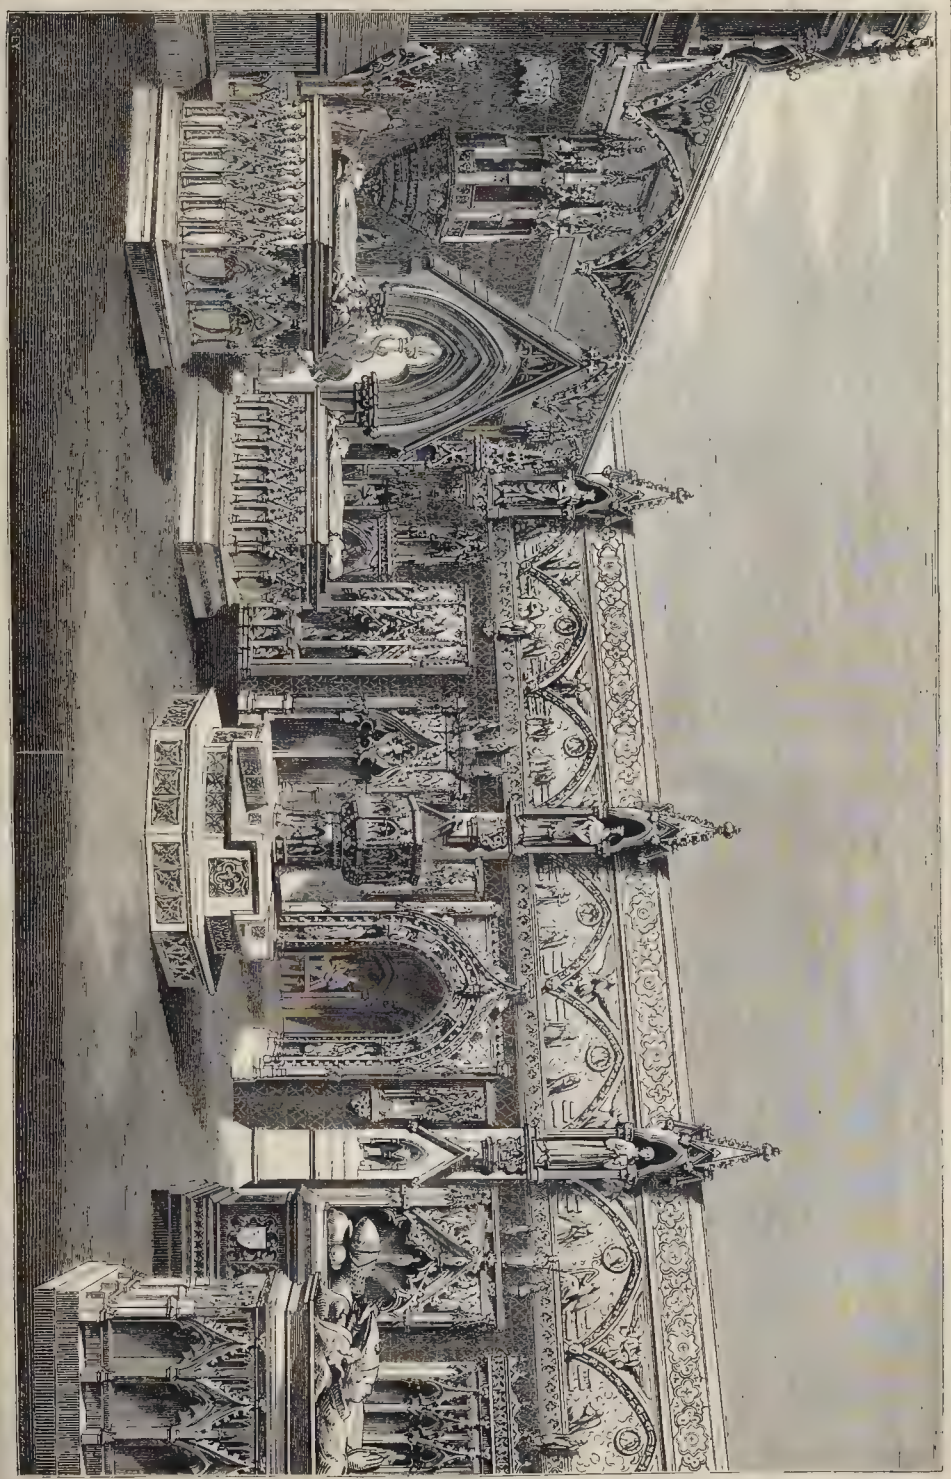
Algarkirk (Lincolnshire).—The church of St. Peter and St. Paul, in this parish, which has been in course of restoration during the last three years, will shortly be re-opened. The repairs and decorations have been done in accordance with the original design, at the sole expense of the rector (the Rev. B. Beridge), under the superintendence of Messrs. Carpenter and Crece, of London. Amongst the alterations, not the least is the lowering of the floor of the church, by which means the loftiness of the interior is increased to the extent of 3 feet, and thereby a better proportion of the edifice is secured. The doors, windows, and seats are all new. The large windows at the east and west ends are stained and covered with emblematic designs, &c.

Winchester.—The new church of the Holy Trinity, recently erected near the North Walls, between the Middle and Upper Brooks, in this city, was opened on Thursday in last week. The church has free sittings for between 700 to 800 persons, and the Rev. G. A. Seymour has endowed it with the sum of 3,333*l.* The building was commenced in June, 1853, by Messrs. Gover, Brothers, from a design in the Early Decorated style by Mr. Woodyear, of Guildford, and cost about 4,000*l.*

Melbury.—On 9th inst. the church of St. Mary, Melbury Bubb, Dorset, was reopened for the first time since the rebuilding and restoration. The works, which have been in progress for the last twelve months, comprise the complete rebuilding of the nave and chancel, as nearly as possible on the old foundations. The old tower has been retained, but has received, where requisite, certain restorations. The new building consists (as did the old) of a nave and chancel, with tower rising from south side of nave. It is built entirely of stone with Ham stone dressings. The roofs and benches are all of oak, and the external coverings of lead. The chancel is fitted up with carved oak screen and stalls, pulpit, and reading-desk, executed from the architect's designs by Rattee, of Cambridge. The bench ends in nave have also enriched panelling. The paving is of red and black tiles in nave, and figured encaustic in chancel. The cost of building will reach nearly 1,000*l.* principally contributed by the Earl of Ilchester, the Rev. J. J. Matthews, the rector, and Mr. H. Dickson, with a small contribution from the parish. The architect engaged to superintend the building was Mr. R. H. Shout, of Yeovil.

Leigh.—Some extensive alterations and improvements are being made at this church, under the same architect, for the Rev. N. G. Smart, the incumbent, consisting of the addition of a new north aisle, and beautifying the chapel by the insertion of new windows; fitting up in same carved oak stalls, &c. and in the nave a new oak pulpit and reader's desk, with other necessary alterations and renovations.

Hove, Plymstock (Devonshire).—The new church of St. Anne, for this parish, is drawing towards completion. It will seat 400 without galleries: it has a nave, chancel, south aisle, and porch, and bell-cot at the west end. Mr. William White is the architect, and Messrs. May, of Devonport, are the builders.



Stanton-on-Arrow.—The church of this village has been lately rebuilt, and was opened on 14th inst. The old church has been taken down, and the present stone-turreted edifice has been erected, chiefly by Mr. J. King King, M.P. The architect was Mr. Nicholson. The floor of this edifice is laid with encaustic tiles manufactured by Godwin, of Lugwardine.

Lysway's Hall.—A mural monument to the memory of the late Mr. C. S. Forster, of Lysway's Hall, and intended for erection in the church of that parish, has just been completed by Mr. Peter Hollins, of Birmingham, in whose studio, according to the *Staffordshire Advertiser*, it will remain for a short time. It consists of a Greek sarcophagus, at each end of which is placed a figure—one with averted face, and holding a torch reversed, being the personification of Grief; and the other of Consolation, the latter having in the right hand a wreath, as the emblem of immortality. The sarcophagus is surmounted by a scroll and cross. The background is composed of a black marble slab, against which is placed a Grecian pyramid, bearing the arms and crest of the deceased gentleman, over which a pall is placed.

Smethwick.—The chief stone of the new church of Smethwick, near Birmingham, was laid on Saturday before last, by the Earl of Dartmouth. The architect is Mr. James, of London, and the builder, Mr. Samuel Briggs, of Birmingham. The style is Late Decorated. The edifice includes a nave, chancel, north and south aisles, north and south porches, bell turret for two bells, organ chapel on south side of chancel, and vestry on north. The extreme length of exterior is 97 feet 7 inches; interior nave 65 feet 7 inches long, chancel 23 feet 9 inches, and 20 feet broad. The extreme breadth of nave and aisles is 47 feet. The nave is 41 feet high, and the chancel 38 feet. The interior roof will be of stained timber, of equilateral pitch, and seats stained. The upper part of nave walls will be pierced by quatrefoils, as a clerestory. The material employed is Hampstead stone, from the Earl of Dartmouth's quarries at Tower-hill, with Bath stone dressings. The church, which will cost about 3,000*l.* is calculated to accommodate five hundred worshippers, a large proportion free. It is also in contemplation to erect a parsonage, land for which, as well as for the church, has been presented by Mr. Unett.

Haslingden.—The chief stone of a new congregational chapel was laid here on Monday in last week. The building is already raised several feet above the ground. The chapel will be of Early English style, and will afford sittings for 800 persons. Estimated cost (including land) 2,200*l.* The design was furnished by Messrs. Cooper and Peet, of London, architects. The contractors for the works in the building of the chapel are—Messrs. William Clough and John Simpson, masons; Messrs. Henry and Thomas Holden, joiners and builders, Haslingden. On the completion of the new building the old chapel is to be converted into Sunday-schools.

Doncaster.—Christ Church is being both externally and internally repaired and redecorated. The interior walls are distempered in warm stone colour, with the ornamental parts relieved; and the ribs of the vaulting over the side galleries are rendered deeper in shade than before. The woodwork is stained, grained, and varnished in imitation of dark oak. Eight stone quatrefoil ventilators have been let into the walls of the nave over the galleries, and two similar ones on the landings leading thereto. The whole of the pews have been repaired. The floor of the church, the roofs, and boundary-wall of the churchyard, and the exterior of the church, have been pointed and repaired. The restoration of the pinnacles and other injured parts of the ornamental work of the exterior is in progress.

THE ENGLISH GOTHIC COURT, SYDENHAM.

[See page 397, ante.

THE SUNDAY QUESTION.

The numerous writers on this question seem to overlook that this is not a mere what-is-ordinarily-called working man's question. They seem to ignore the fact that there are thousands and thousands of persons in this metropolis who are entitled by birth and education to call themselves gentlemen, who are as much precluded from the *use* of our museums and public institutions from onerous official and private duties as the artisan of the lowest grade. It is very true that they are not in a position to say that they have never been to such or such places, but what I wish to enforce is, that they have no opportunity of making a habitual and ordinary *use* of them. The listless and monotonous manner in which this class of men pass the Sunday afternoon and evening is notorious. Their excuse is patent. They must either do this or obtain the unenviable name of being *fast*. It is true that a quiet cigar contributes to the revenue, and that our periodical press is highly indebted to this state of things; but why should the question be fought under false colours? You know, I know, every one knows, that the afternoon and evening services of the Church are left principally to tradesmen and servants: what becomes of the *balance*, as our American friends say? It is either *fast* or torpid—excellent things, no doubt, in a horse or turtle—but a *man* requires rest, *not inertness*—rest from, in many instances, the mere mechanical duties of every-day life, by bringing into operation the higher faculties of the mind, and exercising and developing a taste for objects to be met with in our museums, exhibitions, and galleries.

W. H. B.

PROVINCIAL NEWS.

Spalding.—The design for the new Corn Exchange-hall here includes a tower 7 feet higher than the roof, and in which a clock, it is expected, will be fixed.

Ipswich.—The foundation-stone of the Artillery Depôt was laid on Wednesday in last week by Earl Stradbroke, lord-lieutenant of the county, in the presence of a numerous and fashionable assemblage. The site is a high piece of ground, overlooking the town, on the north side of the Anglesea-road. Mr. R. M. Phipson is the architect, and Mr. F. Mason, the contractor for the works. The point of the building which the chief stone occupies is the corner of the north-east bastion.

Brighton.—It is intended forthwith to erect a new college here, to be conducted on the same principles as the college at Hurstpierpoint. The site chosen for the new building, which, according to the local *Gazette*, is to be on a larger scale even than the Hurstpierpoint College, is at the back of the inn called the Pad, on the road between Old Shoreham-bridge and Lancing.

Burslem.—The Sewerage Committee of the Burslem Local Board of Health, according to the *Staffordshire Advertiser*, have reported to their board, that considering the statements of Messrs. Lee and Stevenson, the engineers, that the sizes of the sewers in the altered plans were as large as they could conscientiously recommend, that they would answer the purposes designed, and that the General Board would not sanction any plans for larger sizes, the committee recommend that they be adopted, on the distinct understanding that the responsibility of the plans rested entirely with the engineers and the General Board. It was resolved by the board "that the report of the Sewerage Committee be received and adopted, also the plans as now altered, with the estimates, namely,—for public works, 13,194*l.*; for private improvements, 12,581*l.* 9s.: total, 25,775*l.* 9s.; it being, however, distinctly understood that the responsibility of the plans rests entirely with the engineers and the General Board."

Bridgnorth.—Contracts have been entered into with Messrs. Powell and Foxall, of this town, to erect two chapels, a lodge, boundary walls, &c. to the new public cemetery at Tipton's Cross. Mr. Thomas Powell undertakes the carpentry and wood work, and Mr. Foxall the masonry, &c. They have already commenced operations.

Chester.—The new erections of the waterworks company already in progress are a subsiding reservoir and filtering tanks. The former, into which the water will be pumped by the engines at the river side is enclosed by a brick wall, and a bank of about 20 feet in width. Its dimensions are 74 feet by 170 feet, and 10 feet in depth; and it will hold 500,000 gallons of water. The water will flow thence through large cast-iron pipes into filtering tanks, three of which will be made at once, and a fourth at some future period when the wants of the city require it. Two of these filters will be in length and breadth 77 feet by 64 feet, and 6 feet in depth; the third and smaller one 54 feet by 64 feet, and the same depth as the others. From these filters the water will flow into a pure water tank, or reservoir for filtered water. This tank will be of an irregular four-sided figure, 115 feet in its greatest width, and 122 feet 6 inches greatest length, depth 6 feet. It will be covered over with 2-inch flags supported upon cast-iron girders, and the top will be covered with soil and sown with grass seeds. Close to the pure water tank a circular brick building will be erected 62 feet in height, upon the top of which will be placed an iron tank, 12 feet deep and 70 feet in diameter. This tank will be roofed with slates. The water will be raised to the top of the tower by two engines within the building, and thence it will descend to be carried through 15-inch cast-iron mains from Boughton to the supply of the city. The height from which it flows is such that it will throw up a jet of 80 feet at the Cross. The works will be competent to supply one million gallons of water per day. Messrs. Sigley and Shawcross, of Manchester, are the contractors for the erection of the subsiding reservoir and tanks, and Mr. Hartwright, engineer, superintends the works as the representative of Mr. Bateman. The building of the water tower is not yet contracted for.

Merthyr Tydvil.—The Local Board of Health of this borough have appointed Mr. Henry, C.E. of Manchester, to be engineer and surveyor to their Board. They are about to execute extensive water-works, and to carry out a system of drainage for the district.

Liverpool.—The chief corner-stone of the new St. Aidan's College, which is to be erected on a site to the rear of Claughton Firs, was laid on Tuesday in last week, by the Marquis of Blandford. The new institution is an extension of that founded some years ago by the Rev. Dr. Baylee, of Birkenhead. The edifice, when completed, will consist of a quadrangle; but, in the meantime, it is proposed to proceed with no more than the principal or northern front, and portions of the eastern and western sides. The building will be of Tudor style, containing in the centre the main entrance, the principal's house on one side, and residences for the students on the other. The roof will be high-pitched, and surmounted by a cresset. The west wing will be appropriated to the master's room, the refectory, and the students' residences. The centre will embrace the entrance-hall and grand staircase leading to the college library and museum. The students' chambers will contain thirty residences, and will be so constructed as to serve both for sitting-rooms and reading-rooms, but the dormitories will be separate. The remaining portions of the edifice will be constructed when sufficient funds have been obtained. When completed, the college will occupy an area of about 19,000 square yards, or nearly four acres of ground, and will contain commodious residences for a large number of students. The architects are Messrs. T. H. Wyatt and Henry Cole, and the contractors for the erection of the building are Messrs. J. and W. Walker, of Birkenhead. The building operations are being carried on under the superintendence of Mr. H. Cole.

Bolton.—The progress of the new market-house has been delayed for some time, in consequence of the groined arches which are to support the flooring of the market having given way under the pressure of their own weight, which is said to have been made unequal in the construction. Mr. Wm. Fairbairn, of Manchester, C.E. having been consulted, has examined the structure, and reports that it will be necessary to take down the whole of the arches, and he advises that they should be rebuilt on an altered and cheaper plan, and at a cost of 500*l.* This plan the Markets' Committee have resolved to carry out.

Morpeth.—A commencement has been made in the works for the erection of the proposed County Lunatic Asylum, near Morpeth. The site is near the racecourse, on land purchased of the Earl of Carlisle. The building will be on an extensive scale.

Sunderland.—A coloured lithograph of the plan for an improved entrance to Sunderland Harbour, designed in 1849, by Mr. Meik, C.E. engineer to the Wear Commissioners, has been published by Messrs. Lambert, of Newcastle. The advantages of the plan as set forth are, that by carrying the entrance further seaward an increased depth will be obtained; that the extension of the north pier will be a protection against the disturbing effect of the sea in that direction, and that the navigation will be tranquillised by the swell into the mouth of the harbour expending itself upon the beaching ground.——An extensive educational establishment, at Bishopwearmouth, erected through the exertions of the Rev. J. P. Eden, the rector, was covered in during week before last. The building, standing in the "Rector's-park," consists, according to the *Gateshead Observer*, of three large school-rooms. The first-class boys' school-room is 55 feet in length, 20 feet in breadth, and 14 feet in height. There is also a class-room attached, 21 feet in length by 15 feet in breadth. The second-class boys' school-room is 76 feet in length and 18 feet in breadth; adjoining which is a large class-room, with an open roof. The girls' school-room is of same dimensions, and lighted by three large skylights of Hartley's rough plate-glass, and four large windows in the side. There is a commodious dwelling-house for head master and governess.

Newcastle-upon-Tyne.—The report on the proposed new bridge over the Tyne, by Mr. Brooks, engineer of the Tyne Commission, proposes the removal of the ancient bridge over the Tyne at Newcastle, substituting a new bridge adjoining, and immediately below, the High Level Bridge, the piers to be founded upon Mitchell's screw piles, by which great delay and cost will be avoided, and the bridge easily completed in two years, at a cost of less than 45,000*l.* The bridge to have a breadth of 60 feet, or roadway of 40 feet, with footways of 10 feet each. The two arches in mid-channel to be of the same width as those of the High Level Bridge, with two side arches of 60 feet each, the northern in two leaves of 30 feet each, lifted by water power. 60-feet quays below the new bridge may be constructed on screw bearing piles in the vicinity of the bridge, so as to allow the same waterway for the discharge of the land-floods as is now provided for the waterways of the High Level Bridge. Plans, according to the *Newcastle Courant*, are being prepared to be submitted to the corporations of Newcastle and Gateshead.

Glasgow.—The new fish-market at the north end of Hutchesontown Bridge has been formally opened. The market is 96 feet long, 40 feet wide, and 28 feet high from the lower floor to the ridge. The front of the building is occupied by eight retail shops 12 feet by 13, fitted up with stone counters, and perforated water-pipe. The wholesale department consists of a flat below, laid with asphalte, easily accessible by boats on the river, and to which an entrance is had from the front by two flights of steps, as well as a roadway at the east end for carts. The building is lighted by 7 feet on either side of the ridge of the galvanized corrugated iron roof being glazed with plate-glass. The market can be extended at both ends.——The range of buildings on the north side of Gordon-street, between Buchanan-street and West Nile-street, is being demolished, to make way for a new building to be erected for the Glasgow branch office of the Commercial Bank of Scotland, at present doing business in Virginia-street. The architect, builder, and all the tradesmen engaged upon the new bank, with the exception of the plumber, says the *Glasgow Gazette*, are from Edinburgh. The stone with which the edifice is to be faced is likewise to be brought from the neighbourhood of Edinburgh, and is to be the same as that of which the Royal Exchange is built.

THWAITE'S SECRET WRITING.

THE means of communicating secretly with persons at a distance, for diplomatic, commercial, and other purposes, being necessary in the present artificial and untrue condition of society, numerous modes have been devised from time to time, some of them so transparent, by the way,—so pregnable when attacked mathematically, that it is surprising they should still be used. We have lately examined a system invented by Mr. Thwaites, of Bristol, which appears to possess great advantages. The arrangement is simplicity itself,—a great recommendation. It consists of a square tablet of wood, on which are a number of alphabets, say six, in upright lines. Next to each of these is a groove, in which a slip of wood, having on it two alphabets, printed in red ink, one letter under the other, can be moved up and down. A key word has to be agreed upon by the parties who are to correspond, and, beyond this, the letter against which the key word shall be formed. For example, if we adopt the word *Ursula* against G, the moveable alphabets are brought down or pushed up until the red letters form against the fixed G's, in a horizontal line, the word agreed on; and then in writing the despatch the red letter, whatever it may be, which stands opposite the proper letter required to spell the word, working from left to right, is written, instead of the black letter, and is afterwards read by the person to whom it is addressed by setting the tablet to the word agreed on. The permutations, it will be seen, are numberless. Even this, or any one word, will give, of course, twenty-four entirely fresh arrangements, by forming it against the different letters.

Mr. Thwaite's system, as it seems to us, deserves the attention of Downing-street and all bankers.

HINTS FOR THE MUSEUM AT CANNON-ROW.

WHEN an intelligent workman associates with those of his own calling, he feels as much confidence in conveying his common sense opinions to them as the ablest statesman in doing so to those of his own class; but if he be called upon to extemporise before those who move in a more elevated circle, it unnerves him—he feels abashed, is unable to find words, or give utterance to his sentiments, which, under more favourable circumstances, might prove instructive. This was precisely the position in which some of our intelligent artisans were placed at a meeting on the 6th July, at the Architectural Museum, in Cannon-row, Westminster. Many were anxious to express their gratitude for the kind feeling displayed by the gentlemen who addressed them, but had not assurance enough to do so. Were these meetings more frequent, this want of confidence would be found to disappear; and the presence of employers on such occasions would instil into the minds of workmen obligations that would not easily be effaced. It is social meetings of this kind that will create a mutual understanding between them.

Mr. Scott, in pointing out the superiority displayed by foreign artists when compared with our own, very truly remarked that he did not consider this difference emanated from any intellectual incapacity on our part; but our illustrious neighbours possess many advantages for improvement that we do not, and one, not the least among them, was that of having every facility rendered them for studying from the most eminent works of ancient masters—a very great boon, indeed—but, in my opinion, they have another advantage which is of far greater importance—they have ample time allowed them for studying every object which they may have to carry out. Their works of art are not made so much a matter of £. s. d. as ours. Our carvers have to study quantity more than quality. With them, quantity is made a secondary consideration, if noticed at all. Of this we have an excellent example at Mr. Hope's house in Piccadilly, carved, I believe, by French artists, to whom every credit is due for their studious and easy working habits. And why should not our workmen enjoy the same privilege as they? This is where the great evil lies. Works of art cannot be properly carried out unless the artist has ample time allowed him to study properly every feature of the object upon which he may be engaged; and this, I am convinced, never will be unless our architects, in conjunction with employers, pursue a very different course to that which is now generally practised by them. Carving, if properly managed, could, in many cases, be well finished with no greater expense than is now incurred in doing it in a slovenly manner. This portion of the work, like most others, is often included in the builder's contract, the architect occasionally reserving to himself the right of appointing his own carver; but the latter has then to make his own arrangement as to price, &c. with the builder, by whom he is screwed down, with promises of having every assistance to facilitate the work. If it be executed in soft stone, he may pay him 2s. 6d. or 3s. each for human heads or common size bosses. Every one of these, if properly carried out, would require a day's studious application; but to earn wages and pay him for his time, he has to carve four in a day. Should he refuse the unreasonable terms offered, and is compelled to solicit the interference of the architect, he is then no better off—obstacles are thrown in the way—with much difficulty he gets his scaffolding erected. If the work happens to be outside, he is left exposed to the glaring sun, with no covering to protect him, has to leave off when it rains, and is put to many other inconveniences, and and not the least among them is that of inserting the hardest and coarsest of the stone where carving is to be introduced. All this would have been obviated had he accepted of the builder's terms. Being in this position, let the carver be ever so well inclined, how is it possible the work can be efficiently carried out? The result is, that those parts which require the feeling of the artist remain untouched, the foliage is shaken by hammering too heavily upon it, the undercutting neglected, pencil lines are drawn in for shadow, the scaffolding struck, and thus the architect is often deceived, vegetation accumulates on the rough surface, and symptoms of decay are soon observed, yet the carver is often compelled to adopt some such plan to make it pay him for his loss of time. I am now speaking of those who would act fairly if they were fairly treated. I am sorry to say there are others who will take every mean advantage, treat them as you will.

One of the greatest benefits architects will derive from the Museum in Cannon-row is the facility which will be afforded them of making a selection of those from among the students who may be best qualified for the different works they may have to carry out. At the same time, I would impress upon gentlemen whom it may concern the necessity of giving carvers ample scope for variety. They are now too often made mere machines of, meant but to copy.

W. T.

RAILWAY MATTERS.

THE question of the necessity for some communication between guards, drivers, and passengers, which we long urged single handed, is at length on the way to a settlement. The London and North-Western and the Midland Companies have secured the right to use on all their lines a plan claimed by Professor Gluckman as his own invention; and the Great Northern and other Companies, it is believed, will speedily follow the example, as the Board of Trade appear to be impressed with a sense of the necessity for an efficient communication between guards and drivers, and determined to insist on its adoption. This is a fair beginning, and will doubtless lead to the adoption of some safe and allowable means of effecting a communication between passengers and guards—often no less urgent and important than that between guard and driver, but best of all accomplished by personal contact, through such arrangements as may enable the guards easily and at all times to pass along from carriage to carriage. This we have frequently urged, pointing out the numerous instances in which it was essential to the safety of passengers and trains, and at length it was even specifically recommended by the Railway Commissioners as a most important desideratum. We are still hopeful of its being carried out, in order to complete the system of inter-communication in trains during transit.

The preamble of the North Metropolitan Railway has been declared proved by a committee of the House of Commons. This interesting and novel undertaking will commence at the General Post-office, in St. Martin's-le-Grand, and proceed beneath the streets and roads of the metropolis all the way to the terminus of the Great Western Railway at Paddington. The entire distance will be four and a half miles. It will cross Smithfield, and proceed along the Fleet Valley to the New-road, taking Coldbath-fields Prison in its way. For the removal of this building the promoters have made an arrangement with the Middlesex magistrates. The promoters of the railway are to build a prison for the county of Middlesex, not less than six, and not more than nine miles from London—the building to contain accommodation for 1,500 prisoners. Three miles of the North Metropolitan Railway will run underneath roads, or unoccupied property, which will considerably lessen the expenses incident to the construction of the line. The entire estimated cost is 1,000,000*l*. The Subterranean Railway will join the Great Northern, the London and North-Western, and Great Western lines. The stations are to be at Victoria-street, Clerkenwell, King's-cross, Euston-square, Hampstead-road, Osnaburg-street, Baker-street, Edgeware-road, and opposite the Great Western Hotel, with a branch to the Great Western station. Trains will start every five minutes. The time required to perform the journey will be a quarter of an hour, and the fares for the whole distance will be 2d. for the third-class, 4d. for the second-class, and 6d. for the first-class carriages.

Notices of Books.

Illustrations of the Collegiate Church of Southwell, with Architectural Description. By the Rev. J. F. Dimock, M.A. London: Simpkin and Marshall.

WE have in this folio volume ten illustrations in lithography of the very interesting Norman structure, Southwell Collegiate Church, scarcely precise enough for professional students, but serving to convey a good idea of the structure to general readers. In the Introduction, Mr. Dimock disposes of several of the errors in Mr. Dickenson's "History."

The chapter-house is an exquisite example of the Geometrical period of Gothic architecture, not later in date probably than the end of the thirteenth century.

The Poetry of Christian Art: translated from the French of A. F. Rio. Bosworth, Regent-street. 1854.

THIS is a charming volume, containing a large fund of detail, chiefly on the subject of early Italian painters and their pictures. Though not much known in this country as yet, Rio's work has been referred to and quoted by more than one distinguished English writer on art. Mrs. Jameson, in her "Poetry of Sacred and Legendary Art," speaks of the author as one "to whose charming and eloquent description of Christian art I refer with ever fresh delight." The present pleasantly-worded translation (by a lady) of this little work is likely to be read by many, and, indeed, deserves to be perused by every lover of art who would wish to become intimately acquainted with the early Italian painters. The book opens with a chapter on Christian Painting,—first in the Catacombs, afterwards in the Basilicas, and on the progression of the Romano-Christian School, contrasted with the retrogression of the Byzantine. The School of Siena is next treated of, with Guido and others. Then follow Cimabue and Giotto, with a review of the progress of art during this first period. The next chapter treats of the loss of unity in Christian art, and its invasion by Paganism. Then follows the new era formed by the frescoes of Masaccio, and the development of Naturalism, with a review of the century, inclusive of the Florentine painters in the Sistine Chapel. There are a couple of chapters on the Mystical School, followed by one with opening remarks on the great reform attempted by Savonarola in the sciences, arts, and public education, and another treating of the purely religious school formed under his influence, and the decline of art and enlargement of the domain of Paganism. The last chapter treats of the Venetian School, the Byzantine, the Pagan, and the stability given by Giovanni Bellini to the purely religious school, the whole concluding with sketches regarding Bellini's disciples, remarks on the distinctive qualities of the Venetian School, and on religious and patriotic enthusiasm. Throughout every part of the volume there are interesting biographical and other details regarding painters and their works. Every page is full of animation and of interest, mingled, it may be, now and then with a little sprinkling of enthusiastic extravagance which adds a zest.

PAINTERS' ESTIMATES.—Please oblige several of us by inserting the following tenders given to the churchwarden for painting the outside of St. Mary's Church, Rotherhithe:—

Boyne, Paradise-row.....	£94	10	0
Cable, Church-street.....	85	0	0
Vellenometh, Paradise-row ...	75	0	0
Knight, Rotherhithe-street ...	51	0	0
Stevens, ditto	49	0	0
Durrant, Seven Houses.....	47	12	0

—A. B. & C.

Miscellanea.

THE HAT SMASHERS.—As it is generally understood that the Metropolitan Building Act is under consideration for amendment, allow me through your paper to suggest an item for the consideration of those who are framing the amended Act. Long and many have been the complaints made by the community at large, with the exception only of the hatters, against that abominable nuisance—the outside shop blinds. Could not a more definite clause be inserted in the said Act for the prevention of these hat smashers? Projections from front walls beyond a certain extent, so as to overhang the public way, are forbidden by Schedule E of the present Act, and surely these may be deemed projections under the meaning of the Act. If not they should be made to come within the meaning of the clause referred to, or else be kept a certain height above the footway. A crush-hat is very convenient for evening assemblies, but a crushed hat is anything but convenient or elegant to parade in during the bright part of the day. I am aware there is some law as to keeping these blinds 8 feet above the pavement, but whose duty is it to see the same carried out? Your interference will greatly oblige the tall public, and even the moderate-height public, who on wet days may be seen dodging about in all manner of directions to prevent their umbrellas coming in contact with the iron rods and canvas blinds, or to avoid the sudden pleasure of seeing their hats rolling into a *muddle of pud*.—DIS.

NORTH OXFORDSHIRE ARCHÆOLOGICAL SOCIETY.—The first annual meeting of this society was held on Monday week in the Mechanics' Institute, Banbury, Mr. R. Goffe in the chair. The Rev. P. Hookins, one of the honorary secretaries, read the report, which stated that an increase of members had taken place, both of clergy and laity. The meetings during the year had been well attended. At the quarterly meeting, in December, a paper had been read "On the Uses of Archæology," by Mr. Hookins; "On some Monumental Slabs found in Bloxham Church," by Mr. Hewett; "On Roman Sites in the Neighbourhood, and the Coins lately found at Evenley," by Mr. T. Beesley. On the 4th of April, the Rev. Mr. Payne, the rural dean, had given the explanation of an unpublished letter of Charles I.; Mr. Miller had read notes "On the Siege of Banbury;" Mr. Rye, "On the Town and Camp of Madmarston;" and Mr. Bruton, "On the Influence of Archæology in Decorative Art." A room was intended to be procured for a museum; the articles presented during the year being considerable, and others promised when the depôt is procured. A paper "On the Madmarston Tumulus," was read by Mr. Thomas Beesley, and Mr. Rye read a paper "On Monumental Brasses." Colonel North, M.P. was appointed President of the Society, and other office bearers were elected. The dinner took place at the Red Lion Hotel; the Mayor in the chair. The excursion, on Tuesday, from Banbury to South Newington, Rollright, Little Compton, and Chipping Norton, was well attended, and after examining churches, works of antiquity, art, and curiosity, the party dined at the White Hart Inn, where the Mayor of Chipping Norton presided. The closing meeting was held in the Town-hall, Chipping Norton, where various antiquities were exhibited. Mr. Beesley read a paper "On the Rollright Stones," and supposed this a place of sepulture from Celtic times to that of Pagan Saxon. Mr. W. Wing read a paper "On Cold Norton Priory," and the Rev. Mr. Jordan one "On Ancient Title Deeds."

MODERN UGLINESS.—Take any modern London street, examine the houses in detail, or look at them in the "block," with their brown plastered sides, the grim attempts at ornamentation here and there perceptible, their squared doors, squared windows, angular parapets, the ghastly array of tin or zinc pipes, propped with iron rods, and with strange gyrating cowls, all incessantly showering masses of pitchy carbon upon the passers-by. Or turn, if you please, to the bustling throng below: pay attention for a moment to the attire of the first half-dozen: when you have seen enough, cast your eye upon the huge cumbrous cruelty-vans that crowd the roadway, with their motley load of passengers some four or five and twenty in number, drawn by two poor reeking, panting horses, one moment mercilessly flogged in order to outstrip a rival, the next, pulled up sharply on the hard granite, till their trembling limbs, protruding but usually sightless eyeballs, and bleeding mouths, too plainly tell the mute agony that nothing but the knacker's knife will end! Having sufficiently inspected this repulsive exhibition of British brutality, cast your eye for a moment on yonder train about to start, and answer conscientiously whether it is possible to conceive anything much more clumsy or more thoroughly frightful than the boxes into which some 200 passengers are being stowed, unless it be the snorting and shrieking machine they are about to pursue.—*New Quarterly*.

LECTURES AT THE ARCHITECTURAL MUSEUM.—On the 24th, Mr. E. W. Cooke delivered a lecture "On the Use of Natural Productions as the Basis of Ornament." On the 7th of August, there will be one "On the Distinctive Characteristics of Greek and Mediæval Sculpture," by Mr. C. R. Cockerell, R.A.; August 21, "On the Progressive Changes in Ornament, in the Successive Styles of Mediæval Architecture," by Mr. Scott; September 4, "On Colour and its Use in Architectural Art," by Sir Walter C. James, Bart.; September 18, "On Sepulchral Brasses and their Art-Manufacture," by the Rev. Charles Boutel; October 2, "On Mathematical Curves suitable to Architecture," by Mr. Penrose; October 16, "On the Utility of Art-Museums, as Means in Fine-Art Education," by Mr. Bruce Allen. Cards of admission will be presented on application at the Museum.

THE HAYMARKET THEATRE.—Dear Mr. Editor,—I was present at the Haymarket last night, on the first representation of Mr. Stirling Coyne's new drama, "The Old Chateau," and would bear delighted witness to its moral and elevating tendency, as contrasting refreshingly with some recent adaptation from the French stage, which many like myself do not feel the better for having seen. It is something to attain when our thrill of sympathy and admiration is roused by a noble sentiment or a great deed—worse than nothing when it is excited by an appeal to our less worthy passions. I thought that the ball-room in the second, and the moonlight scenery in the third acts were effective and satisfactory. The Spanish Dancers are valuable ethnologically.—PHIL. J.

YORKSHIRE ARCHITECTURAL SOCIETY.—The quarterly committee meeting of this society was held in the rooms, Minster-yard, York, on 6th inst. The chair was taken by the Rev. Canon Randolph, and several new members were duly elected. The Rev. J. B. Scriven, of Clifford, called the attention of the society to the works in contemplation, or in progress, in the churches of Spofforth and Aysgarth, in the former of which it was proposed to replace the chancel by one of meagre dimensions, and in the latter to remove the rood-screen, originally brought from Jervaulx Abbey, and some carving. Resolutions were adopted, which it was agreed should be sent respectively to the Archdeacons of Craven and Richmond, expressive of regret, and with suggestions for the obviation of what was deemed objectionable. Other cognate resolutions were passed, and it was agreed that the next general meeting of the society should be held at Burlington during August.

REWARDS OF LABOUR.—As a subscriber and constant reader of your valuable paper, I have observed, with delight, the deep interest you feel in the welfare of your fellow countrymen, but especially of those who are oppressed and wronged. The zeal with which, from time to time, you have advocated their rights, has induced me to call your attention (and through the *Builder*, the attention of the public), to a growing evil which should be discouraged by all those who feel interested in the advancement of the arts and sciences, the progress of sound education, and the elevation of the working classes. I allude to the miserable pittances offered through advertisements and otherwise, and actually given, too, to persons of good education and superior abilities, as a compensation for their services, with which they are expected to keep up a respectable appearance (in fact, *must* do so in the present day or lose caste), and very generally give security to the amount of some two or three hundred pounds, from which it is to be inferred that the situation is one of trust. Should they succeed in procuring the security, are duly qualified, and can give satisfactory references, the enormous sum of sixty, seventy, or even eighty pounds per annum, may perhaps be obtained, and that by persons not only acquainted with book-keeping, and the usual duties of an office, but *practically* acquainted with some mechanical art,—persons who have not only received a good education, but been articled or apprenticed to some trade or profession, and have by perseverance and close application obtained a complete knowledge of their business. I would quote an advertisement from the *Builder* of the 8th inst. where a person who is a good accountant, capable of keeping *all* the usual books of a contractor, understands the measurement of artificers' work, &c. is required from six to eight o'clock (which is equal to seven and a half days a week), for which he is to receive thirty shillings weekly, whereas a journeyman bricklayer, carpenter, or mason, would receive at least thirty-seven shillings and sixpence for the same time. And this, though bad, is not so bad as many I could quote of recent date, not only in builders' offices, but surveyors', engineers', and others, in which ability and a practical acquaintance with their several branches is indispensable. This week again, I see a clerk wanted in a surveyor's office, the same number of hours, and I have reason to believe the salary, or weekly stipend, would be about the same. T. C.

SCOTCH FIR.—The purposes to which Scotch fir may be applied, particularly when the firs attain a large size, will be seen from the following extract from the *Inverness Courier*, dated the 4th June, 1834, in which it is stated by Sir Thomas Dick Lauder, in his tour through Scotland, that he visited Gordon Castle, where, in the entrance-hall, he saw a fir-plank, 6 feet in breadth, with the following inscription on brass, which he took the pains to copy, and which our readers may not be disinclined to read:—"In the year 1783, Wm. Osbourne, esq. of Hull, purchased of the Duke of Gordon the forest of Glenmore, the whole of which he cut down in the space of twenty-two years, and built during that period, at the mouth of the River Spey-by-Garmouth, where never a vessel was built before, forty-seven sail of ships, of upwards of 10,000 tons burden. The largest of these, 1,050 tons, and three others but little inferior in size, are now in the service of his Majesty and the Hon. the East India Company. This undertaking was completed at the expense of labour alone of about 70,000*l*. To his Grace the Duke of Gordon this plank is offered as a specimen of the growth in the above forest by his Grace's most obedient and humble servant, W. Osbourne. Hull, 26th September, 1806." The sum for which the Duke of Gordon sold his forest of fir-wood in Scotland was 10,000*l*. It is said that, for warm climates, Scotch fir-built ships are far superior to oak-built ships.

TELEGRAPHIC PROGRESS.—On Saturday before last, one end of the Mediterranean Submarine Telegraph rope was dropped in the harbour of Spezzia by the *Persian*, which left immediately for Corsica, uncoiling the rope as she went.——Mr. R. Green, of the Flint-glass Works, Brettell-lane, Stafford, has patented the forming of insulators entirely of glass or porcelain, and with a screw of same material for connecting it to the support.——Mr. J. L. Clarke, of Islington, has patented a method of insulating wire, to obviate the effects of return or inductive current: wires, insulated by coatings of gutta percha or india-rubber, are to be further inclosed in a cheaper insulating matter, resinous or bituminous matters being preferred for the purpose.——The Earl of Dundonald has just taken out a patent in the United States for a composition of asphaltum for the covering of telegraphic wires, as well as for the making of foundations for piers and lighthouses, preservation of all wood under water, and making of pipes, tanks, &c.——In the United States they seem to manage to construct the electric telegraph at a cost not exceeding 30*l*. per mile; and to farmers and settlers residing along the lines, they allow the use of the telegraph for their own purposes, gratuitously, as a compensation for watching the wires and repairing them when necessary, for which purpose they are furnished with the requisite tools and instructions. In this way an entire population, among whom the telegraph passes, are interested in its preservation. In 1846 there were 10,000 miles of telegraph in the United States.

EMPTY HOUSES IN MANCHESTER.—It has been calculated that there are not fewer than 8,000 dwelling-houses in Manchester without tenants at the present time,—a larger number than was ever before known. The high price of provisions and want of employment have induced many families of the working classes either to go into lodgings or to live in dual groups—that is, two families in one house. The building trade is much slacker than at same period last year, and a large number of joiners are out of work.

WORKMEN.—We are glad to hear that all opposition to the use of machinery and machine-prepared work at Nottingham amongst the carpenters and joiners is at an end, there being now no shops in this neighbourhood in which the men have the power to prohibit them. They seem so generally to have altered their opinion of the whole matter, as to regret the course they have pursued, though a few of the more violent continue to show a bad feeling.—— The masons of South Shields are on strike for an advance of wages from 27s. to 30s. a week, a demand with which, it is said, few employers have complied. —— The Dublin operative painters have struck work, and sent deputations to England for assistance.

LIQUID QUARTZ.—Mr. H. Hardinge, of New York, has taken a patent for manufacturing liquid quartz or silex, to be used in the manufacture of certain compositions for ornamental and useful purposes. The inventor claims—1. The introduction of steam under pressure into the pulverised agitated mass, thereby lessening the quantity of boracic acid, or other solvents, heretofore used, thus saving the cost, and rendering the liquid quartz so formed sufficiently cheap to be useful; 2. Condensing the steam or vapour produced in the process, so as to save the particles of liquid quartz that are carried off with the steam in the form of capsules; 3. The introduction of liquid quartz, made by the above process, into various compositions.

NORFOLK AND NORWICH ARCHÆOLOGICAL SOCIETY.—The annual general meeting of this society took place on Wednesday in last week, at North Walsham, and excursions were made on that day and Thursday to various places of interest within convenient reach. The proceedings of the day commenced with an assembly in the National School-room, where various antiquities were exhibited. Sir Willoughby Jones took the chair. Mr. Harrod, honorary secretary, then read the programme, and the company at once started to the first place on the route, Trunch Church, giving a passing glance at Swafield Church. The company then hastened on to Knapton Church: here the Rev. J. Gunn officiated as guide, and pointed out the features of interest. From hence the party proceeded to Paston Church, where Mr. Gunn was again *cicerone*. From Paston a short drive brought them to the principal object of the day's excursion, Bloomholm Priory, where refreshments were handed about; after which Mr. Harrod read a paper on the early history of the Priory, and by the aid of a plan of the ruins, made in 1822 by Mr. Spurdens, was enabled, although the foundations had now to a great extent disappeared, to give his auditory a pretty clear idea of the form and proportions of the original building. The homeward route was taken by Edingthorpe, where a few explanatory remarks were made by Mr. Gunn, and North Walsham Church, where the Rev. R. Eden accompanied them round the edifice, and showed the Paston monument. The dinner took place at the King's Arms Inn. Between fifty and sixty ladies and gentlemen sat down under the presidency of Sir Willoughby Jones. They assembled again in the National School-room, at eight o'clock, when some papers were read, including one by the Rev. C. R. Manning (from Mr. Greville Chester), upon "The Antiquities of the Valley of the Yare and Waveney;" by the Rev. S. W. King, on "The Antiquities recently discovered at Hempnall;" and by Mr. Harrod on "The Felmingham Antiquities." The proceedings of the day terminated with a visit to the vicarage, where they partook of tea and coffee, at the invitation of the Rev. R. Eden. On the following day an excursion was arranged, including Worstead, Tunstead, Smallburgh, Barton Turf, and Irstead, and the company were hospitably entertained by the Rev. J. Gunn, at the latter place.

WESTMINSTER BRIDGE.—In the *Gentleman's Magazine* for 1750, a view of Westminster-bridge as then finished is given, with a memorandum which is interesting:—"The first pile," it says, "was driven in 1738, and the whole was finished and ready to be opened for use in autumn 1747, when it was discovered that the fifth pier from Westminster side was sinking, and soon after some stones fell out of the arch next to it. It was necessary, therefore, to take off the arches that rested on the pier, which was done with great care by replacing centers under them, like those on which they were turned. The sinking pier was then loaded with 12,000 ton of cannon and leaden weights, in order to sink and settle it: this and the deliberation how to repair the defect took up above a year, but in the summer 1749, materials being ready, it was set about and entirely finished for use, and opened Nov. 17, 1750, at midnight, having been retarded three years. The pier that had failed was freed from its burden by a secret arch, now not to be seen. This structure is certainly a very great ornament to our metropolis, and will be looked on with pleasure or envy by all foreigners. The surprising echo in the arches, brings much company with French horns to entertain themselves under it in summer; and with the upper part, for an agreeable airing, none of the public walks or gardens can stand in competition." For the protection of passengers over it at night there was at this time a watch of twelve men!

THE SIZE OF MARKETS.—The *Manchester Guardian* gives the following estimate of the size of different markets:—St. John's, Liverpool, with shops, 549 feet by 135 feet, area, 8,235 square yards; Birkenhead, with shops, 440 feet by 130 feet, area, 6,355 square yards; Newcastle-upon-Tyne, with shops, 337 feet 6 inches by 241 feet 3 inches, area, 9,047 square yards; Smithfield, Manchester, open space covered with roof—mean length 442 feet by 244 feet, area, 11,441. And if we add the following—uncovered space (Manchester), 512 square yards; butchers' market, 978 square yards; line of two and three story shops, 1,465 square yards; fish market, 544 square yards; it will be seen that the actual area of market space at Smithfield is 14,940 square yards; being 5,898 square yards more than that of Newcastle, the largest of the above markets.

THE NEW COMMISSIONERS OF SEWERS.—Deputations from the three parishes in the borough of Marylebone have met, and selected Dr. Augustus Sayer, for nomination by the borough members of Parliament, as one of the new Commissioners of Metropolitan Sewers. The Kensington ratepayers have selected Dr. M. Truman, of Norland-square.

SCULPTURED OBELISKS AT ARBROATH.—There are three obelisks in the churchyard of St. Vigeans, at Arbroath, which the *Northern Warder* thus describes:—On one of them is an inscription in characters bearing a mixed resemblance to the old Anglo-Saxon, or the older Erse, and said by those who pretend to know about the matter to be Pictish, and the only inscription of the kind in Scotland. So far as we are aware, it has never been read, and does not seem likely to be. These monuments, the relics of the times that have no other record, were long unnoticed and unknown to antiquaries until the late Mr. P. Chalmers, of Aldbar, employed an artist to take copies of them. For their present state of excellent preservation they are mainly indebted to the Rev. Mr. Muir. However, one of the finest of them has been placed in an upright position against the wall of the church, close to one of the doors, and thus, unfortunately, has been already greatly mutilated by the attacks made upon it on wintry Sabbaths by heavy-shod and shallow-pated Vandals attempting to kick the snow from their shoes before entering the church. As the slab is of a very friable nature, a few winters will infallibly destroy it. Casts of the obelisks have been taken by Mr. H. Laing, and purchased by the Scottish Society of Antiquaries. The moulds used are not likely to have been destroyed, and might answer the same purpose again.

DISCOVERY OF AN IMMENSE EXCAVATION UNDER JERUSALEM.—The *Bristol Times and Journal* contains a detailed communication received from Jerusalem, in which it is stated that a portion of the northern wall of the city, about 200 yards east of the Damascus gate, having given way, and broken through the roof of what then appeared to be a natural cave, the wall was repaired by order of the pasha, and the broken strata closed up with masonry, without exciting much curiosity. Rumours, however, having got afloat, through the workmen, that the place closed up was of no ordinary character, a few individuals lately succeeded in obtaining access, among whom was the writer of the communication itself, who describes it as evidently nothing else than a vast underground *quarry*, large enough, even as far as it has been explored, to have furnished the materials for the building of the temple and the walls of Jerusalem. It extends south-east of Mount Moriah in the direction of the Mosque of Omar. The windings and the sections of this amazing excavation are so intricate and complex, continues the writer, that we frequently found ourselves returning to those spots from which we had successively started, without either knowing or recognising them again, in spite of the landmarks which we had set up for ourselves as we went along. The roof of this enormous excavation, which took us above three hours in perambulating, is supported at intervals of about 20, 30, or 40 yards, by square massive tower-like bastions, or pillars of various heights and dimensions, formed out of the native rock. As some of these supporters are decaying at the basement, the roof may at no distant day give way at that part, and become the tomb of the houses and the people above. Those portions of the cut away rock which lie exposed to the action of water, were coated over with a thick incrustation of stalactites, which showed the remoteness of the age of the excavation, yet the marks of the chisel on the dry portion of the rock looked as new and fresh as if the workmen had only just retired. We proceeded onwards, encountering in our way only such objects as tended to heighten our curiosity, and to excite inquiry, such as, why and wherefore were deep niches cut here, and a flight of steps there? or to what class do those animals belong, over whose burrows we were stumbling? or how and when had the human skeletons that lie on yonder ledge of rock been brought hither? All these gave way to an object of much greater interest, almost affecting. Within a retired solitary place, hidden from the gaze, stood a grey-looking circular basin of about 3 feet in diameter, scooped out with great regularity in the solid rock, receiving in its bosom the water that was filtering through the sides and the ceiling above. Close to it lie scattered broken pieces of pottery, remains of vessels used for drinking, and which appeared as if they had only just dropped out of the hands of the hurried workmen when coming hither to quench their thirst.

THE LIVERPOOL FOUNTAINS.—We are informed by a Liverpool correspondent, that the fountains to which we lately alluded, were suggested and carried out by Mr. Charles Melby, of the firm of Melby, Romilly, and Co. at his own cost. We wish some metropolitan would follow this gentleman's excellent example.

VENTILATION OF POLICE-COURTS.—A correspondent with a "distracted headache," from attendance at one of our crowded yet ill-ventilated police-courts, complains of the noxious atmosphere which prevails in these courts, and expresses his surprise that the police magistrates do not insist on their proper ventilation.

LONDON IMPROVEMENTS.—A very interesting "List of the Openings to be made, and Passages to be improved and enlarged in the City of London, pursuant to an Act of the last Session of Parliament," is given in vol. xxvi. p. 325, of the *Universal Magazine* for 1760. This shows what ground the City authorities can give up when they feel so inclined.—W. P.

"BETTY MARTIN."—There is a statue in the National Gallery, I think, of Minerva, in a sitting posture, which has acquired from its proximity to St. Martin's Church, the venerated name of "Betty;" but instead of the proper respect being paid to so prominent a figure, they have disfigured it by placing a chimney-pot, or some such inelegant contrivance behind it, so that the poor lady is deprived of the sun all day, and we see her ever in the shade. Is this in mode, or is it some weak invention of the enemy, to spoil the said National Gallery at both ends? I hope some day to see your suggested street at the east end, and then perhaps "Betty" will be allowed to shine out in her proper proportions at the west.—T.

NEW THEATRE ROYAL AT NOTTINGHAM.—The new theatre here has been completed and opened. The architect was Mr. Robert Clarke, of Nottingham, and the building of the interior portion has been completed under the superintendence of Messrs. Rook and Clarke. Mr. Casson, the machinist of the theatre, laid down the stage, with its traps. The scenery, scroll ornaments, proscenium, ceiling, and decorative part were done by Mr. Nicholson, and Mr. Dyer, of Nottingham, completed the gold panelling.

A "BLACKGUARDS' PORTRAIT GALLERY" is in course of formation at Glasgow, where the chief constable designs to daguerreotype all the principal thieves and desperadoes of both sexes with whom the city is infested. It is thought that such a collection, when complete, will freshen the recollection of plundered people, and materially forward the ends of justice.

TENDERS

For the erection of warehouse and dwelling at the corner of Fell-street, Wood-street, Cheapside, for Mr. White. Mr. William Reddall, architect.

Scott and Cornwell	£1,824	0	0
Grimsdell	1,754	0	0
Ashby and Sons	1,754	0	0
Haynes and Co.	1,655	0	0
Johnson	1,598	0	0
Carter and Ellis	1,593	0	0
Burton, Henry	1,563	0	0

Received by the City of London Commissioners of Sewers for inclosing with wood and iron ninety acres of land, at Ilford, for a cemetery.

Myers	£9,096	0	0
Emmett	9,073	0	0
Philips	8,955	0	0
Hack	8,450	0	0
Watts	8,320	0	0
Hill	8,293	0	0
Munday	8,200	0	0
Holmes	7,448	0	0
Carey	6,825	0	0
Geust	6,797	0	0
Crook (accepted)	5,887	0	0

For additions and alterations to a warehouse in Bread-street, for Messrs. Bouch and Coath. Mr. James Tillott, architect. Quantities supplied.

Jay	£5,347	0	0
Mansfield	5,170	0	0
Lock and Nesham	4,840	0	0
Wilson	4,693	0	0
Haward and Nixon	4,400	0	0
Haynes and Eyre	4,380	0	0
Brass and Son	4,293	0	0
Lawrence and Son (accepted)	3,942	0	0

For hotel, Walsall, for Mr. David Hawkins. Mr. G. B Nichols, architect. Quantities supplied.

Briggs, Birmingham	£2,250	0	0
Croft, Walsall	2,250	0	0
Burkett and Nelson, Wolverhampton	2,095	0	0
Rowley, Walsall	1,828	18	0

For residence at West Bromwich, for W. J. Kite, esq. Same architect. Quantities supplied.

Burkett and Nelson	£1,634	0	0
Briggs	1,520	0	0
Harley	1,436	0	0
Smith and Naden	1,423	0	0
Fisher	1,374	0	0

ADVERTISEMENTS.

CITY IMPROVEMENTS.—Extensive Sale of Building Materials, Newgate-street.

PULLEN and SON respectfully announce, that they are instructed to SELL by AUCTION, on the PREMISES, on the PRIDAY, JULY 21, at TWELVE, in Lots, the excellent BUILDING MATERIALS of Four Large Houses, 93, 94, 95, and 96, Newgate-street, and a House in the rear (to be taken down for the purpose of widening the street), comprising a large quantity of good sound brickwork, several tons of lead, plain and fan tiling, oak and fir timber in stout roofs and floors, sashes and frames, a variety of doors, wainscoting, partitions, sound floor boards, ship-fronts, sills and coping, and a large assortment of useful fittings-up.—May be viewed on Saturday previous. Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 80, Fore-street, Cripplegate.

ON THURSDAY, AUGUST 10th -Second Portion of the Materials of the Giltspur-street Prison.

PULLEN and SON have the honour to inform the public that the SALE of the SECOND PORTION of the valuable MATERIALS of the GILTSPUR-STREET COMPTER will take place on THURSDAY, AUGUST 10, and following days, and will comprise the House of Correction (as divided), the infirmary, and the chapel, and all the remaining cells and buildings in the rear of the governor's house.
80, Fore street, July 18.

SECOND PORTION.—The Valuable Materials of the Giltspur-street Prison and House of Correction.

PULLEN and SON have the honour to announce that they are favoured with instructions to SELL by AUCTION, on the PREMISES, on THURSDAY, AUGUST 10, and succeeding days, at TWELVE, in Lots, the SECOND PORTION of the capital and extremely valuable MATERIALS of the GILTSPUR-STREET COMPTER and HOUSE of CORRECTION. Detailed particulars of this enormous mass of property (the largest of the kind that has been offered to public competition for many years) appear in catalogues. The following is a short summary of it:—4,000,000 of the finest stock bricks, 12,000 feet of sheet copper on the roofs, 21 tons of lead in flats, gutters, tanks, and pipes, prime oak and fir timber of large and useful scantlings, glazed sashes, modern doors, ma ble chimney-pieces, and all the excellent interior fittings-up of the governor's house and officers' departments; 300 squares of sound floor-boards, 25,000 feet of York paving and landings, the capital Portland stone front, with cornice, sills, and stringing, and 1,600 feet run of coping, 10 iron cisterns, engine, pulpit, and fittings of the chapel, all the fittings-up of the numerous cells, with their strongly-barred windows, stone floors, and iron doors, with locks and bolts of a peculiar construction, massive iron railed gates, guards, and fences, expensive hot water apparatus, by Perkins, costly drying apparatus, with machinery complete, by Cooper, wrought-iron steam-boilers and fittings of the kitchens, coppers, stoves, ranges, cisterns, pumps, baths, gasfittings, and an immense variety of materials, fixtures, and fittings-up of a superior description, and readily convertible for building purposes. May be viewed two days previous; Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 80, Fore-street, Cripplegate.

HACKNEY.—Important Sale of the Materials of Messrs. Loddiges' extensive Hot-houses and Conservatories, Pits, and Frames, with the celebrated Palm-house, including 1,000,000 Stock Bricks.

PULLEN and SON, in conjunction with Mr. J. C STEVENS, respectfully announce that they are instructed by Messrs Loddiges, in consequence of the disposal of their celebrated collection of Plants of the Crystal Palace Company, to SELL by AUCTION, on the PREMISES, on THURSDAY, AUGUST 17th, at TWELVE, the whole of the valuable BUILDING MATERIALS and FITTINGS-UP of the celebrated Palm-house, extensive ranges of Conservatories, Pits, and Frames, Seed-rooms, and various buildings, in Mare-street, Hackney, comprising 1,000,000 excellent stock bricks, a large quantity of sheet lights and frames, about a superficial acre of glass in the hothouses and conservatories, two miles of 4-inch iron flange pipe, with 14 large wrought iron boilers, and all the hot water heating apparatus complete, 10,000 feet of York paving, a most expensive Conservatory 150 ft. long by 20 wide, with copper sash-bars and framing, 5,000 feet of shelves and benches, copper pan and garden tiles, implements of trade, and a variety of valuable materials and fittings-up.—May be viewed two days previous; catalogues had of Mr. J. C. STEVENS, 38, King-street, Covent-garden; and of PULLEN and SON, 80, Fore-street, Cripplegate.

GREAT WESTERN RAILWAY.—Second Portion of the Materials of the old Terminus, Paddington.

MESSRS. EVERSFIELD and HORNE are honoured with instructions from the Directors of the Great Western Railway Company to SELL by AUCTION, on the PREMISES, at Paddington, on TUESDAY, AUGUST 8, at TEN for ELEVEN, in consequence of the number of Lots, the very valuable MATERIALS and FITTINGS of the Arrival Platform and Sheds; also the substantial range of Buildings containing the board-room and offices, carriage-sheds, &c. comprising 30 square of dladches- and other slates, sound timber, principals, and rafters, suitable for re-erection; the stout planking of platforms, board and timber floors, weather boarding, quatterins, linings boards, capital panelled and baize doors, sashes and skylights, eight iron columns 13 feet 6 inches high, gas lamps and pipping, fined cisterns, fittings of water-closets, stoves and chimneypieces, several tons of lead 10,000 feet of zinc covering, sound stock bricks, granite pitching and curb, barrel bell, and other effects; also about 100 large tooled York landings.—May be viewed two days previous, and catalogues had on the premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange

KENSINGTON GORE.—First portion of the materials to clear the site purchased by the Royal Commissioners of 1851.

MESSRS. EVERSFIELD and HORNE are honoured with instructions from the Royal Commission to SELL by AUCTION on the PREMISES, Kensington Gore, on WEDNESDAY, AUGUST 23, at TWELVE for ONE, the excellent MATERIALS and FITTINGS of SIX HOUSES, being Nos. 13, 14, 15, 16, and 17, Kensington Gore, and one House in Cromwell-lane, comprising a large quantity of sound timber in roofs, joists, girders, and floor boards, panelled partition, doors, sashes, and other fittings, slates, stone paving, iron railing, several tons of lead, the capital brickwork, and other effects. May be viewed one day previous, and catalogues had on the Premises, at the Commissioner's Office, Whitehall Place; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

VICTORIA DOCKS.—Barking-road, seven minutes' walk from the Barking-road station (North Woolwich line), are 61 Plots, from Shoreditch or Fenchurch-street), opposite the Abbey Arms Inn, and the corner of Balaam-street, Plaistow, Essex.

MR. JOHN T. FISHER is instructed to SELL by AUCTION, at the ABBEY ARMS INN, Barking-road, on THURSDAY, AUGUST 3, about NINETY PLOTS of FREEHOLD BUILDING GROUND, land-tax redeemed, most favourably situate in the only eligible part for building purposes in this locality, surrounded by extraordinary facilities for transit by road, railways, and river, having noble frontages to Barking-road and Balaam-street, on a gravelly sub-soil many feet higher than the marsh, with capital drainage into brick sewers, within a few minutes' walk of the factories of Messrs. Mare and Co. where 4,000 well-paid artizans are employed, nearly all of whom have to walk long distances to obtain residences, and directly opposite the road to the New Victoria Docks, which are within half a mile, and for position, capability, and extent, will be the largest and most splendid docks in the world, which, with the many factories already existing, and those on the eve of commencement, will convert the whole of this locality into a busy hive of human industry. The demand for houses in this neighbourhood is really enormous with such highly remunerative rentals as are without a parallel in the metropolis or suburbs. The public seeking plots of building ground as investment, speculation, or the realization of ground-rents, are invited to view the estate, as nothing equal to it in point of eligibility in the neighbourhood has ever before been in the market.—Plans and particulars of C. R. RANDALL, Esq. Solicitor, 14, Tokenhouse-yard, City; of the Auctioneer, Barking-road (opposite the estate); and the Inns in the neighbourhood.

SALES BY AUCTION.

NORTH WOOLWICH. Freehold Building Land

MESSRS. PRICKETT and SON will SELL by AUCTION, at the MART, on FRIDAY, AUGUST 4, at TWELVE, in Four Lots, FOUR Valuable PLOTS of FREEHOLD BUILDING LAND, each containing a frontage of 50 feet upon a good road by a depth of 70 feet; situate at North Woolwich, near to the Pavilion Tavern and Pleasure Grounds, and the Victoria Docks.—May be viewed, and particulars obtained of J. Orton Smith, Esq. Solicitor, 17, High-street, Highgate: and of Messrs. Prickett and Son, Auctioneers, &c. 54, Southampton buildings, Chancery-lane.

FORTIS-GREEN, FINCHLEY-COMMON.—Freehold Building Land

MESSRS. PRICKETT and SON will SELL by AUCTION, at the MART, on FRIDAY, AUGUST 4, at TWELVE, TWO Desirable FREEHOLD BUILDING PLOTS, with frontages upon a good road, close to Fortis-green, leading from Finchley-common to Hornsey, and sewer made. Lot 1 has a frontage of 34 feet by a depth of 200 feet; Lot 2 has a frontage of 42 feet, with a side frontage upon a footway of 160 feet.—May be viewed, and particulars obtained on application to J. Orton Smith, Esq. Solicitor, 17, High street, Highgate; and to Messrs. Prickett and Son, Auctioneers, Highgate, and 54, Southampton-buildings, Chancery-lane.

IN BANKRUPTCY. To Timber Merchants, Contractors, Builders, Plumbers, Ironmongers, Firewood Dealers, and Others.

MR. WILLIAM DOUGLAS has received instructions from the Assignees of Mr John Todd Merrick, Builder, to SELL by AUCTION, on the PREMISES, in Hereford-road, Westbourne-grove, Bayswater, on WEDNESDAY, the 2nd day of AUGUST next, to commence punctually at TWELVE o'clock, in consequence of the number of lots, the FIRST PORTION of the ENTIRE STOCK of a BUILDER, comprising about 1,500 squares of well-seasoned flooring board, timber in balk, planks, scantlings &c., 5,000 white and yellow deals, 10,000 feet architraves and other mouldings, laths and lath wood, prepared joiners' work, in doors, sash-frames, and sashes, mahogany in planks and boards, joiners' work benches, painters' trestles, pipe and sheet lead, closet-pans, copper taps and balls, general ironmongery, in locks, ranges, &c; a large stock of scaffolding, 300 poles, ladders, stone paving, slates, bricks, sand, lime, cement, and plaster, counting-house desks and fittings, &c &c.—May be viewed two days prior to the day of sale, and catalogues had of the Official Assignee, No. 26, Basinghall-chambers, Basinghall-street, City; and at the Auctioneer's Office, No. 14, Lowndes-street, Belgrave-square.

METROPOLITAN BUILDING ACT.—Office of Metropolitan Buildings, 8, Adelphi-terrace, Strand, 13th July, 1854. Notice, an EXAMINATION of persons desirous to obtain a CERTIFICATE of QUALIFICATION for the office of DISTRICT SURVEYOR, will take place on MONDAY, the 31st day of JULY instant. Persons desirous to be examined, must apply on or before the 29th instant, and the application must be accompanied by a preliminary statement, according to the course of examination prescribed in the rules for that purpose, copies of which may be had at this Office, or at Mr. WEALES, Architectural Bookseller, 59, High Holborn.

(Signed) ARTHUR SYMONDS, Registrar of Metropolitan Buildings.

COUNTY of WORCESTER.—To ARCHITECTS and SURVEYORS.—Notice is hereby given, that at the next Michaelmas Quarter Sessions of the Peace, to be held at the Shire-hall, Worcester, in and for the said County, on MONDAY, the 16th day of OCTOBER, 1854, the Justices then and there assembled will APPOINT a COUNTY SURVEYOR, at an annual salary of 175l such salary to include his travelling and all other expenses. Printed statements, showing the nature and extent of the duties to be performed by the county surveyor, may be had upon application to me. Candidates are requested to forward testimonials as to their 200 feet run of glazed "He County Surveyor," before FRIDAY, the 1st day of SEPTEMBER next.

WM. NICHOLS MARCY, Clerk of the Peace.
Clerk of the Peace's Office, Shire-hall, Worcester, July 15, 1854.

MIDDLESEX.—METROPOLITAN BUILDINGS ACT, 7th and 8th Vict. cap. 84.—Notice is here by given, that the Court will proceed on THURSDAY, the 24th day of AUGUST next, to the ELECTION of a SURVEYOR for the District of Hampstead, in the said county, in the room of Mr. Christopher, deceased, and such election will be subject to the standing orders of court as to districts and district surveyors; and that no person will be elected a candidate unless duly qualified under the Act and such standing order; and every candidate must, on or before SATURDAY, the 19th day of AUGUST next, address to me in writing a statement of his name, residence, age, and qualification; and must also personally appear before the Committee for General Purposes appointed by the Court, at TWO o'clock precisely, in the afternoon of MONDAY, the 21th day of AUGUST next, at the Sessions House, Clerkenwell-green, and produce to them satisfactory evidence that he is of the full age of thirty years, and a certificate from the Board of Examiners appointed under the Act of their approval, and also such other testimonials of character and qualification as he may deem expedient or the Committee may require, and if approved by the Committee will then be sanctioned by them to be a candidate for the said district.

C. HEATON ELLIS, Clerk of the Peace.
Sessions House, Clerkenwell, 20, 1854.

TO BUILDERS, &c.

WANTED, by a Practical and Experienced Person, a SITUATION as SHOP or OUT-DOOR FOREMAN. Capable of making drawings, taking out quantities, and measuring up work, having had fourteen years' experience. References satisfactory.—Address X. Z. Mr Nash's, Tobacconist, 23, Minories, City, London.

TO SURVEYORS, BUILDERS, AND OTHERS.

THE Advertiser, who has a few hours daily unemployed, OFFERS his SERVICES to the above; he is well acquainted with the routine of the office, plain drawing, and measuring work.—Address, H. A. H. Post-office, Grange-road, Bermondsey.

TO NOBLEMEN, GENTLEMEN, and PUBLIC COMPANIES who are about to build, make alterations, or repair property.

THE Advertiser offers his SERVICES to prepare plans, sections, elevations, and explanatory drawings, specifications, estimates, measure up work, &c.; and generally superintend the buildings to their completion, at a reasonable per centage or fixed salary. Has had a great deal of experience, practically and theoretically, in every description of building, including the most improved arrangements of farm-buildings, workmen's dwellings, drainage, &c.; has a thorough knowledge of the properties and value of materials and labour, the direction and management of workmen, &c. No objection to go to Scotland, Wales, or Ireland. Testimonials will be furnished.—Address A. Z Mr. Eldershaw's, Newspaper Agent, Brown-street, Manchester.

TO ENGINEERS, ARCHITECTS, &c.

THE Advertiser, aged 22, who has had considerable experience in land and engineering surveying, and is a neat and expeditious draughtsman, is desirous of an ENGAGEMENT with an Engineer or Architect. A small salary would be accepted where the opportunities for improvement were great.—Address A. B. 4, Northampton-place, Canonbury-square, Islington.

TO BUILDERS AND OTHERS.

THE Advertiser, who is a first-rate Bench Hand in Joiners' Work or in Cabinet Fittings, and has had good practice in shop-fronts, &c. wishes for an ENGAGEMENT as WORKING FOREMAN, or to take charge of a job. Reference as to ability and character. No objection to the country.—Address, post-paid, to J F. W. New-street Cottage, Kennington-cross.

TO ARCHITECTS, SURVEYORS, BUILDERS &c.

THE Advertiser, a Young Man, offers his services to prepare Plans, Sections, Elevations, explanatory Drawings, Specifications, Estimates, Measure up, Work, &c. upon very moderate terms. Address, Mr. SMITH, 13, Wells-row, Highbury.

TO BRICK, LIME, AND CEMENT MERCHANTS.

THE Advertiser, aged 35, is now open for ENGAGEMENT (in any of the above businesses) to fulfil the capacity of CLERK, to take the management of a wharf, or otherwise, and can take the out doors business, being well known amongst builders.—Address, A. B. Office of "The Builder."

BUILDERS, ARCHITECTS, SURVEYORS (the former preferred).—A Young Man wishes for a SITUATION, has a knowledge of taking out quantities; is a fair calculator and neat draughtsman. Good reasons will be given for leaving his present employer.—Address, C 59, Huntingdon-street, Thornhill-square, Islington.

A GENTLEMAN, who is well acquainted with, and accustomed to, the superintendence of works connected with the drainage and water supply of towns, is desirous of an ENGAGEMENT; is used to levelling making sections, and the other routine of a surveyor's office.—Address, B. Y. Office of "The Builder."

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND BUILDERS.

A YOUNG MAN is desirous of obtaining EMPLOYMENT in one of the above offices; is a good draught-man, and well acquainted with the general routine of an architect's office. Good references can be given.—Address, Y. Z. 11, Royal Exchange.

A RESPECTABLE and EXPERIENCED PAPER-HANGER is in want of EMPLOYMENT in town or country, at per piece or otherwise.—Address to P. R. Office of "The Builder."

TO PLUMBERS PAINTERS, BUILDERS, &c.

A RESPECTABLE YOUNG MAN, who can turn his hand to the Plumbing, Painting, Glazing, Paperhanging, and Gasfitting, would be glad to meet with a permanent SITUATION. Wages not so much an object as a constant situation.—Address, W. T. 12, Arundle-place, Loam-pit-hill, Lewisham, Kent.

A THOROUGHLY COMPETENT Builder's Clerk is open to an ENGAGEMENT in town or country. He is an excellent draughtsman, writes a fine hand, understands book-keeping by double and single entry, measuring, taking out quantities, and the whole routine of the business. Most satisfactory references as to character, &c. and security, if required.—Address to W.S. care of Mr. Kennett, 14, York-street, Covent-garden.

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLORIST OFFERS his SERVICES in the preparation of perspective views, the tinting of backgrounds, and the introduction of landscape: also in general drawing and lithography. Terms very moderate.—Specimens of ability can be seen by addressing A. Z. 20, Denbigh-place, Belgravia.

TO ARCHITECTS.

A SUPERIOR and expeditious Draughtsman and Designer is in want of a SITUATION; understands perspective, working drawings, and details, and has a good knowledge of Gothic.—F. C. 12, Amwell street, Pentonville, London.

TO BUILDERS AND OTHERS.

A YOUNG MAN, a Bricklayer, wishes to ENGAGE himself for twelve months in a builder's firm, or under a house agent, one who is used to all repairs.—Address, C. ALVEY, 3, Saville-street, Marylebone street, Foley-place.

TO CIVIL ENGINEERS AND OTHERS.

AN ARCHITECTURAL DRAUGHTSMAN, who has a good knowledge of surveying, levelling, plotting, planning, plain and ornamental writing, mapping, and civil engineering (drawing, being also well versed in mathematics, is desirous of EMPLOYMENT. Reference to last employer. Salary moderate.—Address, A. G. Mr. Hookham's Library, Old Bond-street.

A GOOD DRAUGHTSMAN, well acquainted with the various styles, and having a thorough knowledge of construction, is desirous of an ENGAGEMENT in an ARCHITECT'S OFFICE. A moderate salary will be accepted.—Address, A. G. Office of "The Builder."—The highest testimonials can be given.

TO ARCHITECTS.

AN ARCHITECTURAL DRAUGHTSMAN is desirous of an ENGAGEMENT. References unexceptionable. Address, A. E. B. Office of "The Builder."

AS CLERK of WORKS, or otherwise, at a very moderate salary, a middle-aged, experienced Man, and well versed in accounts and penmanship, having met with an accident in the left hand is desirous of ENGAGEMENT, where integrity and sobriety is indispensable. Can give unexceptionable references.—Please to address A. Z. Honeysett's Library, Camden-town.

PARTNERSHIP.—To ARCHITECTS and SURVEYORS. A Gentleman, possessing capital and experience, wishes to UNITE with a well-established LONDON ARCHITECT.—Particulars to be addressed to A. B. care of Messrs. Ricketts and Co. 6, Cross-lane, St. Mary-at-Hill, City.

TO PLUMBERS GLAZIERS, AND PAINTERS.

TO BE DISPOSED OF, an old-established BUSINESS in the above line, in Banbury.—For further particulars, apply to 7,264, "Guardian" Office.

TO MUSIC SMITHS AND SMITHS IN GENERAL.

TO BE SOLD, with immediate possession, a thriving BUSINESS at the West-End, with lease of house and furniture if required. A steady person with a small capital would find it a good opening.—Apply, G. D. 5, Carburton-street, Portland-road.

American Importers, 22, Coleman-street, City, London.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Instituted 1831.

PRESIDENT.

His Grace the Duke of Buccleuch and Queensberry, K.G.

MANAGER—Robert Christie, Esq.

SECRETARY—William Finlay, Esq.

Head Office 26, St. Andrew-square, Edinburgh.

The Twenty-third Annual General Meeting of this Society was held at Edinburgh on 2nd May, 1854; William Stuart Walker, Esq. of Bowland, in the Chair.

The Report read to the Meeting, and which was unanimously approved of, contained the following particulars:—

The number of Policies issued during the year ending 1st March is 620, the Sums Assured thereby being 283,715l. giving an addition to the Income in Annual Premiums of 8,393l.

The Policies lapsed by death during the year are eighty-four, the Sums Assured by which amount to 49,850l. and the Bonus Additions to 8,482l. making together 58,332l.

In comparing these sums with the amounts for the preceding year, they exhibit an increase of seventeen in the number of new Policies, and of about 6,000l. in the Sums Assured. The increase, though of moderate amount, must be considered satisfactory, especially when regard is had to the great competition which now exists in the business of Life Assurance.

The number of Policies lapsed by death is four under that of last year, and the amount payable nearly 7,000l. less. Keeping in view the additions made to the business, and the increased age of the members of the Society, these are most gratifying circumstances.

The Sums remaining Assured amount to 4,234,598l.;

The Annual Revenue amounts to 152,615l.;

And the Accumulated Fund is increased to 839,354l.

* * Medical Referees paid by the Society.

VIEW OF THE PROGRESS AND SITUATION OF THE SOCIETY.

	Amount Assured.	Annual Revenue.	Accumulate Fund.
At 1st March, 1836....	£643,871	£21,916	£40,974
Do. 1842....	1,805,067	61 851	141,496
Do. 1848....	2,964,878	110,700	445,673
Do. 1854....	4,234,598	152,615	839,354

POLICIES RENDERED INDISPUTABLE.

By a Resolution of the Society, Policies may, after being of five years' endurance, be declared indisputable on any ground whatever, and the Assured be entitled to travel or reside beyond the limits of Europe, without payment of Extra Premium for such travelling or residence. Special application must be made to the Directors for such privileges, however, and satisfactory evidence adduced that, at the time of his application, the Assured has no prospect or intention of going beyond the limits of Europe.

The Amount of Claims paid to the Representatives of deceased Members exceeds SIX HUNDRED THOUSAND POUNDS.

Copies of the Reports, Proposals, and all other information may be had on application to the Head Office in Edinburgh, to any of the Country Agents, and to the London agency, 126, Bishopsgate-street.

WILLIAM COOK, Agent.

London, June, 1854.

ESTABLISHED 1838

VICTORIA LIFE ASSURANCE COMPANY, 18, King William-street, City.

At the recent division of profits the assets were valued at £176,861

The liabilities at 144,376

Leaving a surplus for division of £32,485

The reversionary bonuses to the assured averaged 53 per cent. on the amount of premiums paid by them.

The business of the Company embraces every description of risk connected with life assurance.

Loans continue to be made to assurers on undoubted personal or other security.

WILLIAM RATRAY, Actuary.

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,

14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.

RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman.

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Francis Power, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Spens, esq.
John Inglis Jardein, esq.	Frederick Vallance, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the Assurances in 1853 considerably exceeded those effected in any previous year, the number of Policies issued being more than 400, and the annual income thereon being upwards of 7,500. It also appeared that, except in 1849, when the visitation of the cholera took place, the claims arising from deaths were, in every year, much below their estimated amount.

The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 33½ per Cent should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the profits.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured	Annual Premium originally paid.	Allowance of 33½ per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 18 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	23 18 0	51 19 6

SMOKE ACT.—WELSH COALS (of the

finest quality), burning free from smoke, are recommended to the notice of Consumers generally, being well adapted to meet the requirements of the Act for the Prevention of Smoke. This Coal will be also found very durable and of intense heat.—Supplied in large or small quantities by E. and W. STURGE, Bridge-wharf, City-road.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

ARCHITECTURE, CIVIL ENGINEERING, &c.—The Architects', Builders', Civil Engineers', and Mechanics' Drawing Classes, conducted by T. J. HILL, Architect, assisted by Mathematical and Mechanical Masters, Offices, 15, Old-street, City-road. ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform Railway Directors, Public Companies, Landed Proprietors, Noblemen, Gentlemen, Solicitors, Land Agents, and Others, that they EXECUTE every description of professional work in the most reasonable terms. Railways, roads, water-works, &c planned, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs, prepared and executed. Estates, manors, parishes, and townships, surveyed and mapped. Land, timber, buildings, &c measured and valued. Houses surveyed, and estimates of dilapidations given. Maps, plans, &c. drawn, copied, and reduced with accuracy and despatch. 24, Guildford street, Russell-square

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING. Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c beg to inform their friends and the public that they have refitted up their OFFICES with every requisite for acquiring a thorough practical knowledge of the profession in all its branches, including models and instruments of every description. The PUPILS are all remodelled and enlarged, embrace all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING OFFICES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c &c Terms One Guinea per Quarter.—For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

IMPORTANT TO ARCHITECTS, BUILDERS, AND OTHERS.

J. M. CASENTINI (successor to the late R. Armstrong, esq.) desires to acquaint his numerous friends and others connected in the trade, that he has just received from the continent a splendid collection of CASTS in the style of Louis XIV and XV., Gothic Relievos, Trophies, Vases, Italian, and other orders of architecture, suitable for internal and external decorations of mansions, villas, first and second rate houses; and may be finished in any of patented colours or gilding.
Modelling executed by J. M. C. to any order or style, with promptitude and despatch on the most reasonable terms. Estimates given for plan'ing and enrichments, and general repairs, or alterations amongst Architectural figures, animals, caps, trusses, consoles, spandrils, centre flowers, brackets, vases, friezes, bed moulds, &c of every description always on hand. Country orders attended to with despatch.—Address, 21, Hercules buildings, Westminster-road, London

SMOKE CONSUMING.—MR. BOOTH begs to acquaint the owners and proprietors of furnaces that he has a plan for consuming smoke upon true chemical principles, by which alone the smoke can with certainty be wholly consumed. The plan can be adapted to any furnace, whether for land or marine engine, and is so simple and inexpensive that it recommends itself in this respect only with its certainty and completeness to offer. Any communications addressed to No. 9, Portland place Wandsworth-road, will meet with immediate attention. Mr. BOOTH may be consulted, in the first instance, and will afford every information, without charge, to the parties requiring the same.

PATENT SOLID SEWAGE MANURE COMPANY, incorporated by Acts of Parliament, 1853 and 1854

For Purifying Sewage and other Feculent Waters, without expense to the atmosphere.
For Fixing and Precipitating their Ammonia, Salts, and other Fertilising Matters; and
For condensing all the Fertilizing Ingredients into a solid manure.
Effected by one continuous operation under covered sheds.
The Directors are prepared to grant LICENCES to Town Councils, Local Companies, Engineers, and others, for the application thereof in any district of the Company's Patent processes under their four existing Patents with all future improvements.
The complete efficiency of the processes has been proved on a large scale at Leicester, and the extensive permanent Works of the Company for purifying all the Sewage of that Borough, containing a population of between 65,000 and 70,000, are now approaching completion, and will be in operation in the course of a few months.
By the Company's Act of the present Session, all Town Councils, Commissioners, and other Public Functionaries are empowered to enter into contracts with the Company without obtaining a special Act for the purpose.
Information as to terms of licence may be obtained on application to the Company's Solicitors, Messrs. WILSON and BRISTOW, 3, Copthall-buildings, London; or to the Secretary, THOMAS PHIPPS, Esq. 44, Gracechurch-street, London.
By order of the Board,
London, July 17, 1854. THOS. PHIPPS, Secretary.

M'COLLOUGH and CO.'S PATENT FELTS, viz. Asphalte Roofing Felt for forming temporary or permanent buildings. Price 1d. per square foot.
Tarboard Felt for lining damp walls, trunk cases, &c. Price 1d. per square foot.
Dry Hair Felt, for covering boilers, steam pipes, &c which effects a saving of 25 per cent. of fuel. Prices according to thickness.
All particulars and samples furnished by J. M'COLLOUGH and CO. 54, Lime-street, City.

TERRA-COTTA.—Statues, Statuettes, Vases, Busts, Consoles, Bas reliefs, &c. by J. M. BLASHFIELD, of Midwall, Proof Pier, West-India Docks Station, and sold at No. 1, Praed-street, Paddington basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Nineveh Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.
The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.
Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.
HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactured, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—
HUBBUCK—LONDON—PATENT.
If not so marked, the reason may be inferred.
Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that may be sold at cheap rates as Pure (oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MOSELEY and CO., sole to the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; JACK and BRABY, wholesale and retail agents, 8, Tottenham-court, New-road, and 30, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO of 46, Norfolk street, Liverpool, who are also sole wholesale Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO Timber-merchants. Dry OXIDES and PAINTS, in kegs of 14 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, and when applied to any building only weighs the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 1 yard superficial with two coats. Sold in casks of 1, 2, and 3 cwt. at 8s. 12s and 21s. each, casks exclusive.
PATENT PERMANENT COLOUR is particularly suited for bath, kitchens, schoolrooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 12s 6d each
PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 6s.
Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s. per gallon.
PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4d. per stone.
DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy for which they are rendered fit for papering or painting in oil colours. Price 10s. per gallon, which will cover and finish about 100 square feet.
PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London

WHITE OXIDE of ZINC and ZINC PAINT. (Lehanche Sel's Patent.)
CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this luminous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, whole sale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe
Zinc Paint is below the price of white lead, possesses equal body, and is perfectly unchangeable in colour.
Price list and prospectus of its superior properties for interior, exterior, and marine purposes forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known but long established articles, and others, painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum hitherto unattained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of fire and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combines with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.
Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.
ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.
